CORE SKILLS

Automation Testing & Planning

Data Analytics

Debugging & Defect Management

DevOps & CI/CD Practices

Process Enhancement

Product Improvement

Project Management

QA Automation

Reporting

STLC & SDLC Methodologies

TECHNICAL SKILLS

Methodologies: Agile/Scrum, Kanban, Waterfall

Testing: Functional, Regression, Smoke, API (API Restful, Postman), UI, Database, UAT, Performance, Parallel

Frameworks: BDD, TDD, Cucumber, TestNG

Test Tools: Selenium WebDriver, Selenium, TestNG, JUnit, Rest Assured Libraries, Postman, JDBC

IDE: IntelliJ, Visual Studio Code

Build Tools: Maven

Design Pattern: POM (Page Object Model)

CI/CD: Jenkins

Programming: Java, SQL, Gherkin (Cucumber), JSON, HTML, CSS

SULEYMAN YILDIZ

QUALITY ASSURANCE AUTOMATION ENGINEER

Accomplished QA Automation Engineer with five years of experience in dynamic Agile environments. Highly skilled at planning and coordinating web application, database, and API testing, debugging intricate issues and pain points, and accelerating product quality. Committed to continuous innovation, has a consistent track record of championing inventive test automation solutions to reduce timescales, boost test coverage, accelerate efficiency, and foster product transformation. Results-oriented professional with impressive communication, organizational, and problem-solving skills, thrives in dynamic cross-functional settings.

PROFESSIONAL EXPERIENCE

QA AUTOMATION ENGINEER | NOV 2022 – OCT 2025

UNITEDHEALTHCARE

- Leading the end-to-end STLC via modern QA tools and technologies, supporting the development of high-end products and applications in an Agile environment. Partnering with customers and cross-functional stakeholders to understand feature requirements, bridging the gap between development and end-user expectations. Implementing test automation and championing POM (Page Object Model) via Java, Selenium WebDriver, Maven, JUnit, and Cucumber with Gherkin. Leveraging TDD (Test Driven Development) and BDD (Behavioral Driven Development) techniques to design, develop, and maintain pipelines that enabled Continuous Integration/Continuous Delivery (CI/CD). Articulating test strategies and developing test plans, test scenarios, and test cases, conducting Smoke, Functional, and Regression Testing. Writing Java code to automate tests by using IntelliJ IDEA, growing coverage and propelling QA efficiency while reducing timescales by 30%. Conducting manual and automated API Testing using Rest Assured library and Postman.
- Coordinating back-end database testing by utilizing Java, SQL, and JDBC libraries. Maintaining a robust Git repository while optimizing test source code via Java and Selenium.
- Identifying, documenting, reporting, and managing defects via Jira, partnering with cross-functional development stakeholders in implementing architecture improvements to augment quality. Acting as a support resource to the team, championing Agile paradigms, and providing subject matter expertise to address any issues.
- Pioneering in-sprint automation, introducing new tools in the testing environment, and modernizing processes, driving improvement across the QA Process.
- Training, mentoring, and supporting the QA team, providing ongoing guidance and support to facilitate team development.

QA AUTOMATION ENGINEER | OCT 2019 – NOV 2022

CARDINAL HEALTH

- Coordinated end-to-end testing, created test cases and scripts, tracked and managed defects, reported bugs and issues, and accelerated continuous product improvement in an Agile-Scrum setting. Gathered and analyzed business requirements and user stories to define test strategies and develop test plans, test scenarios, and test cases. Coordinated Smoke, Functional, Regression, UAT, Back-end, API, and UI testing, managed defects with Jira and used Git for version control. Applied POM for test automation by using Java, Maven, Selenium, and TestNG, maintaining a robust and efficient BDD framework. Conducted compatibility tests with Selenium Grid, ensuring consistent application performance across all browsers and platforms, and slashing test suite execution timescales by 40%. Produced detailed reports of testing status and overall testing activities for key stakeholders and decision-makers to enable product improvement. Maintained centralized knowledge repositories to facilitate knowledge sharing on testing procedures, promoting best practices, and improving overall testing efficiency.
- Actively participated in Agile ceremonies (daily stand-ups, sprint planning, and retrospectives), contributing to the continuous improvement of the SDLC and STLC processes.
