PROFESSIONAL SUMMARY

Software Engineer with 2 years of hands-on experience building and supporting production-grade web applications across the full stack. Strong background in developing responsive, user-focused interfaces and integrating them with secure, scalable backend services and cloud-native systems. Proven ability to deliver meaningful features, build and consume APIs, and work across UI, services, and data layers in agile, collaborative environments. Experienced in JavaScript, TypeScript, React, backend service development, and SQL-based systems, with a track record of improving reliability, performance, and developer workflows through clean architecture, testing, and modern SDLC practices. Passionate about learning quickly, building high-quality software, and contributing to product-focused teams delivering real customer impact.

PROFESSIONAL EXPERIENCE

CGI **Jan 2025 - Sep 2025**
Java Full Stack Developer *Remote*

- Led the development of an enterprise Insurance Claims Management System using Java and Spring Boot for core business logic, Angular for the front-end, and MongoDB for claim records and workflow states. Delivered integrated features that streamlined claim intake, eligibility checks, settlement processing, and fraud scoring, contributing to faster claim handling and improved investigator productivity.
- Designed and implemented Java-based Spring Boot microservices capable of processing over 50K concurrent requests by applying autoscaling, distributed caching, circuit breakers, and asynchronous event-driven messaging, ensuring fault tolerance, scalability, and consistent performance in high-volume insurance operations.
- Built secure Java REST APIs by implementing JWT token validation with signature rotation, IP reputation analysis, anti-tampering logic, and fake-profile detection within Spring Security filters, improving claimant identity verification and preventing unauthorized system access.
- Integrated multiple external insurance verification, policy validation, premium lookup, and fraud scoring APIs into Java services using reactive streams and aggregation pipelines, ensuring seamless connectivity between core operations and external systems to enhance claim processing speed and fraud detection accuracy.
- Designed, deployed, and monitored cloud-native Java applications on AWS using EC2, S3, RDS, SQS, API Gateway, CloudWatch, and X-Ray, including a secure S3-based document management workflow using pre-signed URLs to protect uploaded claim documents and maintain data integrity.
- Developed Angular and TypeScript user interfaces for claim submission, adjuster review panels, fraud alerts, and multi-step settlement flows; migrated the claims processing domain to a fully cloud-native architecture by integrating Java microservices with SAP OData/CDS (read-only) for policy and vendor master data synchronization; maintained OpenAPI 3.0 documentation, schema versioning, and API governance for multiple cross-functional engineering teams, supporting seamless cross-team collaboration.
- Built full-stack application features using TypeScript-based frontends and RESTful backend services, contributing to customer-facing workflows and internal integrations in a production enterprise platform.
- Supported API integrations and asynchronous service communication, applying clean architecture, testing practices, and CI/CD workflows to improve deployment reliability and development velocity.

Infosys **May 2022 - Dec 2023**
Full Stack Developer *Hyderabad, India*

- Developed and supported secure, high-traffic financial and insurance web applications by building backend services with Java 11 and Spring Boot, creating responsive UIs with React.js, and managing cloud infrastructure with AWS, ensuring robust performance and integrated customer experiences.
- Developed secure authentication and authorization flows for Java Spring Boot services using JWT, role-based access control, and multi-factor authentication; added custom detection to analyze token signatures and IP patterns, blocking suspicious or fake user profiles.
- Integrated multiple external partner APIs for payments, customer validation, notifications, and profile services within Java microservices, employing caching, request throttling, API-key security, and failure recovery patterns to ensure smooth integrations and improved system reliability.
- Led the migration of domain routing, document storage, and configuration management to AWS using EC2, S3, RDS, Lambda, and Secrets Manager, improving system reliability, lowering operational costs, and enabling the platform to scale automatically without manual intervention.
- Designed and optimized SQL-based workflows for user profiling, session tracking, filtering, reporting, and high-volume data processing, significantly reducing query execution time and enabling faster operational and business insights for internal stakeholders.
- Developed React.js dashboards using Redux, Tailwind CSS, HTML, and JavaScript for internal operations and policy management teams, supporting over 5,000 users; built Java Spring Boot APIs for multi-tenant operations, domain-based routing, and system monitoring; automated CI/CD pipelines with Jenkins, GitHub Actions, Docker, and AWS; and collaborated through code reviews and sprint ceremonies to deliver features on schedule.
- Developed and maintained React-based UI components integrated with backend APIs, delivering responsive user experiences aligned with evolving product requirements.

- Worked on SQL-backed services and API-driven systems, contributing to feature delivery, bug fixes, and performance improvements within an agile, cross-functional engineering team.

PROJECTS

Insurance Claims Management Portal | [GitHub: RouteServe-API-main](#)

- Built claim processing backend services with Spring Boot, including validation workflows and API integration.
- Implemented secure REST APIs with JWT-based authentication and role-based access control.
- Designed persistence layer with SQL/PostgreSQL and added exception handling + logging for reliability.

Smart Finance Management System | [GitHub: finance_management](#)

- Developed modules to track income/expenses, categorize transactions, and display user dashboards.
- Integrated REST APIs for CRUD operations and added validation to ensure accurate financial records.
- Implemented secure login/session handling (JWT-ready structure) and reusable UI components.

The Aroma Web App | [GitHub: The-Aroma](#)

- Built a responsive food/e-commerce style web UI with product listing and interactive frontend flows.
- Implemented dynamic rendering and form handling using JavaScript with clean component structure.

Weather Application | [Weather](#)

- Created a weather web app that fetches and displays real-time weather data using public APIs.
- Added city search, input validation, and user-friendly error handling for invalid locations.

Text Processing Service | [GitHub: text-processing-service](#)

- Developed a Python service for text parsing, filtering, and transformation for structured output.
- Designed modular functions for clean processing logic and easy extensibility.

Fetch the Most Active Workplaces (Assessment Project)

- Implemented TypeScript logic to fetch, filter, and aggregate API data to rank active workplaces.
- Focused on clean code structure, asynchronous handling, and performance-friendly processing.

Greenfoot OOP Game

- Built a 2D arcade-style game demonstrating OOP concepts such as inheritance, polymorphism, and encapsulation.

IoT Accident Prevention System

- Developed an embedded prototype integrating obstacle/drowsiness detection sensors for real-time alerts.

EDUCATION

Indiana Institute of Technology, USA

Jan 2024 - May 2025

M.S., Information Systems

- **GPA:** 3.70
- **Coursework:** DBMS, ERP, Security, Visualization, IT Governance, Systems Analysis, DSA, System Design

Vignan Institute of Technology, India

Jul 2019 - May 2022

B.E., Electrical Engineering

- **GPA:** 8.0
- **Coursework:** Data Structures, DBMS, Networks, Web Technologies

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, TypeScript, Python, C++, SQL
- **Frontend:** React.js, Angular, HTML5, CSS3, Tailwind CSS, Bootstrap
- **Backend:** Spring Boot, Node.js, Microservices, REST APIs, OAuth2/JWT
- **Databases:** MySQL, PostgreSQL, SQL Server, MongoDB, NoSQL
- **Cloud/DevOps:** AWS EC2, AWS S3, AWS RDS, AWS SQS, API Gateway, Docker, Jenkins, GitHub Actions
- **Tools:** Postman, Swagger, JUnit, Mockito, Jira, Agile
- **Additional Exposure:** SAP ABAP (training), SAP OData (read-only)

CERTIFICATIONS

- Java Full Stack Development (2023)
- SAP ABAP Cloud Certification (2025)
- SAP ABAP Development Certification (2025)
- AWS Cloud Foundations (2025)
- Deloitte Data Analytics Simulation (2025)
