

Carrier Objective:

Aspiring to leverage my expertise in **full-stack Java development** to contribute to innovative and impactful projects within a dynamic and collaborative team. With a strong foundation in **Java, Spring Boot, Angular/React, and RESTful API development**, I aim to deliver robust and scalable applications that enhance user experience and meet business objectives. Passionate about continuous learning and staying updated with emerging technologies, I am committed to driving excellence and efficiency in software development processes.

Professional Summary:

Extensive **4+ years** of experience on **Full Stack Java Development** in the IT Industry. Extensive experience in **software analysis**, design, development, implementation, and testing of **java/J2EE-based Object-Oriented Applications** and **Web-based Enterprise Applications**.

- Experienced in developing front end applications and dynamic web pages using **HTML, CSS (using SASS and LESS), Bootstrap, AngularJS** and using components like **Java Server Pages, AJAX, JSTL, JAVASCRIPT** and **XML**.
- Experience with **JavaScript, Angular JS, React JS, Backbone.js, Express.js, Bootstrap, Node.js**, and **jQuery** for designing and developing dynamic and user-interactive websites.
- Developed **AngularJS Controllers** for modules in the application.
- Expertise in **Core Java** with **Multithreading, Concurrency, File Handling, I/O Generics, Data Structures and Collections, Garbage Collection** and in **java8** features like **Parallel Streams, Lambda, functional interfaces, and filters**.
- Have excellent problem solving, **proactive thinking, analytical, programming skills, communication skill, work ethics** and the ability to work well in a team or individual environment.
- Participation in all phases of **project development** including requirements **gathering** and **analysis** as well as project design, development, implementation and deployment.
- Experience in developing Microservices using **Spring-Boot** and working with spring modules like **Spring MVC, Spring Boot, Spring IoC, Spring ORM, Spring JDBC, SpringWebServices, Spring JMS, Spring AOP** etc.
- Expertise in server-side development with **JDBC, Servlets, MVC architecture, Java Beans, XML**.
- Experience with different application security features such as authentication, authorization, encryption, logging, and application security testing and containing modern distributed mechanisms like **OAuth2, JWT**.
- Experience in working with **Spring cloud** for quickly deploying the JVM based application on the clouds
- Expertise in **ORM tools Hibernate 2.0, 3.0, 4.0, with JPA specifications, HQL, Caching, ACID transaction, Locking and implemented ODM framework like Mongoose for mapping MongoDB**.
- Experienced with **RDBMS** implementation and development using **Oracle, My SQL, MSSQL and DB2**.
- Expertise in database modeling and development using **No SQL** Databases such as **MongoDB and Cassandra**.
- Experience using **MAVEN, JENKINS and Log4j** tools and experience in Data Modeling, Design, Development, Implementation & **Administration of Database systems** using **MYSQL**
- Good knowledge in writing stored procedures, Packages and functions using **SQL & PL/SQL** and good at advanced PL/SQL topics like Triggers, Collections.
- Expertise in creating Databases, Tables, Stored Procedure, **DDL/ DML Triggers**, Views, User defined data types (UDT), Cursors, Functions, data dictionaries, and **maintaining data integrity** and Indexes using **SQL**.
- Experienced in developing **Restful Services** using **JAX-RS** specification like **Jersey and Rest Easy** to implement REST based Application and fully distributed system using **Restful API and Microservices**.
- Knowledge in web **Service Oriented Architecture (SOA)** fundamentals and exposure in **web services-WSDL** using **SOAP and REST** web services.
- Working experience in **Agile (SCRUM)** and test-driven development (**TDD**) development methodologies
- Experience in application development into **Continuous integration** environments like **Jenkins** to integrate and deploy code on CI environments for development testing.

- Good knowledge working with the application management tools such as **JFrog Artifactory, SonarQube**.
- Experience in using bug/issue tracking, project Tracking and Management tool **JIRA**.
- Experience in using **version control** and configuration management tools like **GIT, SVN and CVS**.
- Experience of working with enterprise application **development IDE like NetBeans, Eclipse IDE and IntelliJ**
- Experience in developing selenium automation framework using **Junit/TestNG** and built **ANT/Maven** targets to execute automation suites from command line.

Technical Skills:

Languages	Java 7&8 features, SQL, PL/SQL, Python, JavaScript, PHP, C, C++
Mark-up/XML Technologies	HTML5, CSS3, XHTML, JavaScript, jQuery, Ajax, Angular JS, Angular 2, Angular 4, React JS, Node JS, JSF, JSON, XML, XSD, XSL/XSLT
Tools & Framework	Spring, Spring MVC, Spring AOP, Spring Boot, Spring Security, Hibernate
Web services	AJAX, JAVASCRIPT, JQUERY, JSON, XML, XSL, XSLT, RESTful, SOAP
J2EE Technologies	JDBC, Servlets, JSP, EJB, JNDI, JMS
Web/App Servers	Apache, JBoss and Tomcat.
Database	Oracle SQL-Server, MySQL, MongoDB, Mongoose, Cassandra.
Development Tools	Eclipse, NetBeans3.3, JBuilder, Spring Tool Suite (STS), IntelliJ, Visual Studio Code, Visual Studio, Jupiter Notebook
O-R mapping	Hibernate, IBatis, JPA.
Testing Tools/ Others	JUnit 4.x, JIRA, Soap UI, Mockito, Rational ClearQuest, Jenkins.
Cloud	AWS S3 , AWS SQS , AWS Code Pipeline, AWS Cloud Formation , AWS EC2
Version Control	GIT, GITHUB.
OS & Environment	Mac OS Big Sur 11.4, Windows, Linux, UNIX, Ubuntu

Education Details:

Master: Information Technology
University - Missouri State University

Professional Experience:

Client: Citi Bank -NY
Role: Full Stack Java Developer
Duration: March 2024- Present

Responsibilities:

- **Involved in a variety** of Project Management meetings with the **Customer team**.
- Establishing good responsive **UI web pages** with **XHTML, jQuery, HTML5, CSS3, Angular2, JavaScript**, and **node JS**, as well as **AngularJS** filters in expressions and directives to filter data in the UI with **jQuery** tool.
- Using **Java 8** features such as **Lambda expressions** and the **Stream API** for **Bulk data operations on Collections**, which would improve the application's **performance** as well as the **Spring MVC, Hibernate**, and **Junit frameworks**, to develop the application.
- Extensively used **Core Java** concepts such as **Collections API, Exception Handling, Multithreading, Synchronization**, and **Java I/O** during business logic development.
- Used **Multithreading** (Executor Service) in programming to improve overall performance.
- Engaged in the analysis, specification, design, and implementation and test phases of the Life Cycle (**SDLC**) and **Agile Methodology** used to develop **Java, J2EE, Spring Framework** and **Hibernate** Immunization Registry Web Application.
- Participated in **PI Planning, Sprint Refinement, Sprint Retrospective, Collaboration**, Business Requirements Analysis, Spike Documentation, Story Implementation, **Code Reviews**, Static Code Analysis, and Unit Test Cases.
- Used **Pivotal Cloud Foundry (PCF)** to deploy and monitor microservices, as well as manage domains and routes.
- Performed complete database operations for various layers using **Hibernate (ORM)**.

- Using **Spring Boot**, I implemented one complete module of an application in **Rest API** architecture.
- Created applications with **Spring Framework** features such as dependency **injection**, **Spring Beans**, **Spring data**, **Spring AOP**, **Spring Security**, **Spring ORM**, **Spring boot**, **Spring batch**, and **Spring Web flow** using **MVC**.
- Developed applications using **Spring Boot RESTful** web services and Spring Data JPA, Cloud foundry and Oracle Responsibilities.
- Implemented **Microservices** using **Spring Boot** for making applications smaller and independent and use of **LOG4j** to log regular Debug and Exception statements.
- Using **Kubernetes** cluster to build **Pods** on top of **Docker** Image for using them to define Policies in **AWS IAM** to give access to the credentials.
- Using **Role based** architecture for **Pods** to give access to **AWS S3** Bucket and **AWS SQS** Queue automatically.
- Used **AWS Cloud Pipeline** for **CI/CD** automation that Triggers **AWS Cloud Formation** that provides provision in environment in a safe reputed way. Triggering **AWS EC2** instance and **AWS Lambda** during cloud formation.
- Have experience with **Python** writing automated scripts for generating **MFA** token at regular interval.
- Used **Harness** for Continuous Integration and Continuous Deployment (**CI/CD**)
- Involved in writing **Stored Procedures, Functions, Packages and Cursors** using **SQL** and **PL/SQL** for different **web pages of application**.
- **Critical** and **critical issues** have been addressed. The security rating of Sonar is **A**.
- Creating written test cases for all **Controllers, Services, and DAO levels**, and using **SonarQube's** Quality gate pass to increase code coverage to 90%.
- Using **GIT** to manage software configuration and **version control**.
- Using **JUnit** and **Mockito**, prepare test cases and strategies for unit and integration testing.
- Take care of **Jenkins builds/deployments/Configurations** in all level environments.
- Collaborated with the **QA team** on **testing, debugging, and defect resolution**.

Environment: Java 8, J2EE, Spring Boot, Microservices, Hibernate, JPA, Junit, Mockito, Eclipse IDE, Oracle 11g, Maven, WebLogic Server, Log4j, Git, Sonar, Jira, Splunk

Client: Honeywell- India

Role- Java Developer

Duration: Aug 2020- July 2023

Responsibilities:

- Implemented the application using Agile Development methodology which included **daily scrum calls, two-week iterations, user story planning, retrospective meetings, code reviews**.
- Designed and developed the UI of the website using **HTML, XHTML, AJAX, CSS, and JavaScript**. Developed and tested many features for dashboard using Python, Java, Bootstrap, CSS, JavaScript, and J Query.
- Implemented features such as routing, data binding without a page refresh using Angular 6.
- Designed and developed **Microservices** business components using **Spring Boot** and used various component classes to customize the monitoring of **Microservices**.
- Developed web applications using Java/J2EE technologies Spring **MVC** and **Spring Boot**
- Implemented and exposed service layer using **Spring Boot**, Annotations and controller using **Spring MVC**
- Used **Java 11** new features like **HTTP Client, Nested Based Access Control, Java String Methods, Local Variable Syntax**.
- Used **JQuery/JavaScript** Promises for data manipulation, data traversing, form validations, create the content on the fly depend on the user request, implementing Ajax features for the application.
- Designed and developed application using Struts Framework which is based on MVC architecture to authenticate access levels of users.
- Developed Rest Controller for mapping requests to generate **Restful APIs**.
- Worked on developing **CRUD** applications using MERN stack (**MongoDB, Express, ReactJS and NodeJS**) and REST based API.
- Extensively used **ReactJs, D3.Js, underscore.js, Node JS and lodash.js** for JavaScript object and array manipulations.
- Utilized **Bootstrap** and to develop a reactive website from a static JavaScript, Node JS, Bootstrap, Semantic UI, RESTful API, jQuery existing code base.

- Used **Hibernate** annotation to control data fetching and cascading type and batch size to improve the data access performance.
- Built relational databases (Oracle) to query and maintain the database.
- Implemented JPA repository to access data as DAO.
- Developed Servlets for carrying out controller functionality and JSPs for generating view.
- Implemented DAO layer using **Spring JDBC Template and Hibernate Template API**.
- Wrote **SQL queries** to get the data, update the data from the database and to connect database in the **DAO** implementation classes.
- Wrote **AWS Lambda functions in Python** for AWS's Lambda which invokes python scripts to perform various transformations and analytics on large data sets in EMR clusters.
- Used **Postman, Rest Client, Spring Mock MVC, Spring 4JUnit** for testing the web services.
- Setup the **Continuous Integration (CI)** and **Continuous Development (CD) process** for the application using the **Docker, Maven**.
- Used **JIRA** tool for tracking stories progress, follow agile methodology and sprint planning.
- Used **GitHub, Bitbucket** to maintain the version of the files and took the responsibility to do the code merges.

Environment:

Angular 6.0, Bootstrap 4.0, HTML5, CSS3, Java 1.11, Spring Boot 2.1.1, Spring 5.x, Spring AOP, IOC, Kibana, Cloud Foundry, RESTful, Maven, Lambda, Hibernate 5.0.2, REST Webservice, SQL, Oracle 12c, GIT, TeamCity, Log4j, Node.js.
