## Java Backend Software Engineer

Massachusetts, USA | Open to Relocate | 508-216-0647 | [vamsi.g@myitjobmails.com](mailto:vamsi.g@myitjobmails.com) | [LinkedIn](#)

### PROFESSIONAL SUMMARY

---

Java Backend Software Engineer with 3+ years of experience delivering cloud-native, distributed applications across the end-to-end SDLC. Proficient in Java, Spring Boot, microservices, Python, SQL, AWS, Terraform, and GitLab CI/CD, with hands-on experience in requirements elicitation, application design, coding, code reviews, software integration, test automation, and production support. Skilled at translating complex business requirements into stable, scalable solutions while collaborating with cross-functional teams and maintaining clear technical documentation and knowledge bases.

### TECHNICAL SKILLS

---

**Backend Engineering:** Java, Spring Boot, Spring MVC, Spring Data JPA, Microservices, Python, FastAPI, Django REST Framework, Node.js, REST, GraphQL, gRPC

**SDLC & Delivery:** Requirements elicitation, business requirements documentation, application design, coding, code reviews, GitLab & Git repositories, software integration, Agile/Scrum

**Testing & Support:** JUnit, Mockito, PyTest, unit & integration testing, API testing, test automation, defect analysis, bug fixing, troubleshooting, production support, technical documentation

**Cloud & DevOps:** AWS (Lambda, EC2, S3, IAM, CloudFormation), Terraform, Docker, Kubernetes, GitLab CI/CD, Jenkins, ArgoCD, CI/CD pipelines, DevOps practices

**Databases & Data:** SQL, PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Apache Airflow, PySpark, Databricks, ETL pipelines, query optimization

**Architecture & AI:** Distributed systems, event-driven architecture, asynchronous processing, RAG, vector databases, LLM integration, performance optimization, system reliability

### PROFESSIONAL EXPERIENCE

---

#### ServiceNow, MA | Software Engineer

Nov 2024 - Present

- Designed and implemented distributed Java and Spring Boot backend microservices with REST and GraphQL APIs for an AI-driven enterprise knowledge platform, supporting semantic search across large volumes of unstructured data.
- Facilitated requirements clarification and application design discussions with product and platform stakeholders, documented design decisions, and translated complex business needs into actionable development tasks for the technical team.
- Engineered AWS Lambda-based asynchronous ingestion and indexing workflows with event-driven processing, retry handling, and monitoring, improving responsiveness and system stability under heavy concurrent load.
- Conducted code reviews, maintained Git repositories, and optimized API schemas, query batching, and service integrations to improve throughput and uphold production-grade code quality across the team.
- Implemented test strategies using JUnit, Mockito, and automated integration suites, analyzed results, and coordinated bug fixes with QA to uphold software quality standards ahead of every release.
- Containerized services with Docker and deployed on Kubernetes through GitLab CI/CD and ArgoCD pipelines, enabling controlled releases, rollback strategies, and consistent environment parity.
- Resolved production issues, coordinated fixes across cross-functional teams, and authored runbooks and knowledge-base articles that recommended preventive strategies and strengthened long-term system reliability.

#### Infinite Infolab, India | Software Engineer

Sep 2021 - Aug 2023

- Built and maintained modular backend services and REST APIs using Java, Spring Boot, Python/Django, and Node.js for high-volume transactional workflows backed by PostgreSQL and MongoDB.
- Participated across the end-to-end SDLC, including requirement gathering, application design, coding, integration, testing, code reviews, and Agile sprint planning with distributed cross-functional teams.
- Architected ETL pipelines using Apache Airflow and PySpark on Databricks, improving reliability through retry logic, monitoring, and automated failure-recovery mechanisms.
- Optimized SQL queries, database indexes, and Redis caching layers, reducing response times and database load for reporting-heavy endpoints operating under high-volume workloads.
- Automated AWS infrastructure provisioning with Terraform, standardizing development, staging, and production environments while reducing configuration drift and overall release risk.
- Developed React analytics dashboards, along with user documentation and walkthrough sessions, that enabled stakeholders to monitor operational metrics and adopt new releases smoothly.

### EDUCATION

---

Master of Science in Computer Software Engineering | Northeastern University, Boston, MA

May 2025

Bachelor of Technology in Computer Science | JNTUH, Hyderabad, India

Jun 2022
