

Meet Popat

Fairfax, Virginia - 22030 | (571)-263-1261

meetpopat09@gmail.com | <https://www.linkedin.com/in/meetpopat/>

SUMMARY

Master's CS student (GPA 3.95) with ~3 years' experience at Thomson Reuters building and supporting production applications across backend, UI, and data workflows. Skilled in Java (Spring Boot, Maven), C# (.NET Core), JavaScript, Angular, Vue.js, SQL Server, AWS, Azure, REST APIs, CI/CD, and Docker, with experience in improving performance, maintenance, and deployment, while also exploring natural language processing and generative AI agents.

EDUCATION

George Mason University, Fairfax, Virginia

GPA: 3.95/4.0

Master of Science in Computer Science

Jan 2025 – Dec 2026

Courses: Computer Fundamentals, Analysis of Algorithm, Database Management, Mathematical Foundation, Network Security, Web Development

University of Mumbai, India

GPA: 9.40/10

Bachelor of Engineering in Information Technology

Aug 2019 - May 2022

Courses: Data Structures & Algorithms, Operating System, Automata Theory, Natural language Processing, Computer Networks, Cryptography

TECHNICAL SKILLS

Programming Languages:	C#, C++, Java, Python, Visual Basic, JavaScript, TypeScript, SQL, HTML, CSS.
Tools & Technologies:	.NET, Spring Boot, Spring MVC, Angular, Node.js, React.js, Vue, REST API, Flask, Docker.
Cloud & Database:	AWS, Azure, MSSQL, MySQL, PostgreSQL, MongoDB.
DevOps & Testing:	Azure DevOps, Git, GitHub, GitLab, Team Foundation Server, Selenium, Jenkins.
Fundamentals:	DS, Microservices, OAuth/JWT, NLP, LLMs, Unit Testing (NUnit/xUnit), CI/CD, Agile/Scrum

WORK EXPERIENCE

Thomson Reuters, Mumbai, India

July 2022 – Jan 2025

Senior Software Engineer

- Refactored Porting Agents, to automate the W-2 based 1040 workflow for tax professionals, while optimizing unparameterized LINQ SQL queries, resulting in 30% faster response times and 25% lower database load during peak tax season.
- Architected a bi-directional integration pipeline that decrypted tax data, parsed JSON payloads, and used stored procedures for schema-level field mapping, enabling seamless data exchange and reducing manual effort while improving data accuracy
- Accelerated deployment by migrating 4 team-owned projects from TFS to GitHub and implementing GitHub Actions, reducing manual deployment time by 40% through automated CI/CD workflows.
- Provided production support for Azure-hosted data processing services by resolving stuck job queues (binders) during seasonal traffic spikes, reducing backlog and ensuring service continuity.

Software Engineer

- Migrated document upload functionality to the core service using Stream Writer and extended REST APIs for dynamic file-picking, removing the external agent dependency, lowering response time by 200ms, and improving reliability.
- Reduced logging latency and improved traceability by developing a Serilog wrapper library that enabled dual-output structured logging. Configured automated log purging (10-day retention) to minimize overhead and prevent performance degradation.

Trainee Software Engineer

- Enhanced support operations by delivering 12+ feature enhancements and stability fixes to internal IT monitoring tools using C# and .NET, and developed a configurable maintenance window in the support portal using ASP.NET, enabling controlled database shutdowns during scheduled operations and reducing downtime.
- Wrote 40+ selenium automation scripts in C# using NUnit to validate critical workflows and UI components of the web applications.

PROJECTS

Alexis: A Voice based Chatbot using Natural Language Processing

Currently Working

- A voice-enabled chatbot using Python, Flask, and NLP (NLTK library) supporting real-time speech and text interactions.
- Implemented TF-IDF + cosine similarity (scikit-learn) to retrieve responses from a 1000+ query CSV dataset, improving answer relevance.
- Added Google search fallback with BeautifulSoup to handle out-of-scope queries and ensure consistent responses.

Handshake Job Watcher Bot

[GitHub](#)

- A Java 17 Maven automation bot using Selenium WebDriver & WebDriverManager to log in via a persistent Chrome user profile (SSO session reuse) and scrape Handshake job cards (title/company/pay/link) from a filtered job-search feed.
- Implemented a 2-hour polling scheduler with JSON state persistence (~/.handshake_state.json via Jackson) to detect count increases and send Telegram alerts for the top 15 newest jobs, plus CLI modes for login-once / check / daily-summary and packaged as a runnable JAR.

Stock/Profile REST API

[GitHub](#)

- An ASP.NET Core REST API with EF Core, SQL Server, Repository pattern, DTO/Mappers, JWT token Authentication and Swagger (Bearer/JWT).
- Seeded Admin/User roles, added APIs for Stocks/Comments/Portfolio, including filtering, pagination and PATCH-based partial updates for stock fields, and secured endpoints with [Authorize].

Student-Survey

[GitHub](#)

- A Student Survey full-stack app with Angular 19 (Reactive Forms) and an alternate Vue 3 UI, backed by a shared Spring Boot REST API.
- Developed the backend in Spring Boot 3.5 (Java 21) with MySQL & Flyway, validation, and JSON storage for multi-select fields, configured CORS and deployed on AWS EC2 & RDS.
- Containerized the app using Docker with separate frontend/backend services (8085/8086) and a multi-stage Maven build.

ACHIEVEMENTS & HIGHLIGHTS

- Certification – [Python, Professional Scrum Master – I, Microsoft .NET FSD](#)
- Authored two published technical articles: [Working with Geospatial Data in Python](#) and [Natural Language Processing](#), with combined views exceeding **350,000** on GeeksForGeeks.
