

Software Engineer

LOGISTICS TECHNOLOGY / DALLAS-FORT WORTH, TEXAS

CLIENT	GXO Logistics	ASSIGNMENT	24 months
START	October 12, 2026	END	October, 2028
LOCATION	DFW, TX	WORK MODEL	Onsite collaboration
EMPLOYMENT	W2 through staffing partner	HOURS	40 hours / week

Compensation & Eligibility

PAY RANGE	\$51.60 - \$58.00/hr W2	ANNUALIZED	\$107,328-\$120,640
AUTHORIZATION	U.S. work authorization required	REQUISITION	GXO-57T-S2026

Rate is subject to staffing-partner pay structure, final client classification and candidate experience. Assignment extension is possible based on funding, delivery requirements, performance and continuing business need.

Role Focus

Engineer application services and integration components that support logistics and supply-chain operations. The role sits at the intersection of production software, APIs, data and cloud services, with day-to-day work covering development, integration, troubleshooting, testing and release support.

Primary Responsibilities

- Develop and maintain production services using Python and established engineering patterns.
- Develop data-processing and integration components for logistics, inventory, order and operational workflows.
- Work with structured and semi-structured data; identify and resolve data-quality and integration issues.
- Integrate applications with AWS services, including EC2, S3 and related application/data services.
- Use Git, pull requests and standard CI/CD practices for controlled software delivery.
- Support deployments across development, test and production environments.
- Document APIs, data flows, technical changes and operational procedures.
- Participate in production support and release activities as required.
- Build and support REST APIs connecting internal applications and enterprise systems.
- Write, tune and troubleshoot SQL against PostgreSQL, MySQL or comparable relational platforms.
- Develop ETL/data-processing workflows and automation where operational data must be transformed or reconciled.
- Participate in unit, integration and API testing; resolve defects and support production troubleshooting.
- Investigate failures through logs, database queries and service diagnostics; determine root cause.
- Work in Agile ceremonies, technical discussions, backlog refinement and sprint planning.
- Coordinate across application, data, infrastructure, QA and operations teams when changes cross system boundaries.

Required Qualifications

- 2+ years of professional software engineering or application development experience.
- Strong hands-on Python development experience.
- Strong SQL skills with practical relational-database experience.
- Experience designing, consuming or maintaining REST APIs.
- Production experience with PostgreSQL, MySQL, MongoDB or comparable data platforms.

- Practical AWS experience, particularly EC2, S3 or comparable application/storage services.
- Git experience in a team development environment.
- Working knowledge of development, testing, code review, deployment and production support.
- Ability to independently troubleshoot application, API, database and data-integration issues.
- Bachelor's degree in Computer Science, Information Technology, Engineering or related discipline, or equivalent professional experience.

Preferred

- Logistics, supply chain, warehouse management, transportation or fulfillment systems.
- ETL/data pipelines or operational data integration.
- Azure, Azure Data Lake or Azure Data Factory.
- Docker, CI/CD or cloud deployment automation.
- Event-driven integration, messaging or asynchronous processing.
- High-volume, operationally critical production environments.
- Distributed-team delivery and production support rotations.

Submission Standard

- Resume must clearly show Python, SQL/database, REST/API, AWS/Azure, ETL/data-processing, Git/CI/CD and production support experience.
- Include complete employment dates and current work authorization status.
- Candidate must be able to meet the stated on-site requirement in the Dallas–Fort Worth area.
- Final selection is subject to client approval, staffing compliance and completion of onboarding requirements.

Work Authorization & Compliance

Candidates with valid U.S. employment authorization may be considered, including U.S. Citizens, Permanent Residents, OPT/STEM OPT where applicable, H-4 EAD and other unrestricted employment authorization. H-1B transfer candidates may be considered subject to staffing-employer petition eligibility and client approval. All hires remain subject to Form I-9 verification, applicable immigration requirements, client/vendor compliance requirements and staffing-firm employment policies.

PROFILE PRIORITY Python • SQL • REST APIs • AWS • Data Integration • Production Troubleshooting
