

Data Analyst

Kaiser Permanente | Oakland, California

EMPLOYMENT	W2 Only (No C2C)
PROJECT TENURE	1.5 years; extension up to 24 months based on project funding and performance
WORK MODE	Onsite — no remote option
TENTATIVE START	October 1, 2026
W2 RATE	WORK AUTHORIZATION
\$54.00 – \$62.70 / HR	USC • GC • H4-EAD • L2S • OPT • OPT-EXT • Day-1 CPT • H1B Transfer

Role Overview

The Data Analyst will support healthcare and operational decision-making by transforming large datasets into accurate, actionable insights. The role focuses on advanced SQL analysis, data validation and reconciliation, KPI reporting, dashboard development, trend analysis, anomaly identification, and close collaboration with clinical operations and IT teams.

Key Responsibilities

- Develop and maintain SQL-based data extraction and transformation workflows using AWS S3 and dbt, supporting datasets exceeding 1M patient and operational records per batch.
- Analyze patient demand, appointment adherence, resource utilization, throughput, and financial KPIs to identify trends and business opportunities.
- Perform time-series and trend analysis to support patient scheduling and operational planning.
- Build and maintain Power BI and Tableau dashboards for near real-time KPI monitoring and stakeholder reporting.
- Conduct data validation, reconciliation, quality checks, and exception analysis to ensure accurate, audit-ready reporting.
- Perform anomaly detection and root-cause analysis on irregularities in patient throughput and operational KPIs.
- Translate analytical findings into clear, business-focused recommendations for clinical operations and business stakeholders.
- Collaborate with clinical operations and IT security teams to align reporting and analytics outputs with compliance and business requirements.
- Support analytical models and forecasting initiatives, including Regression and Random Forest outputs, through data preparation, analysis, and performance reporting.

Required Technology & Analytics Stack

Category	Required / Preferred Technologies
Core Analytics	Advanced SQL, Python, AWS, dbt
BI & Visualization	Power BI, Tableau
Data Analysis	Trend Analysis, Time-Series Analysis, KPI Analysis, Anomaly Detection
Data Engineering	ETL / ELT pipelines, Data Validation, Data Reconciliation, Audit-ready workflows
Predictive Analytics	Regression Models, Random Forest, Forecasting
Preferred	Docker, CI/CD, SageMaker, Great Expectations or similar data-quality frameworks

Qualification Matrix

Priority	Requirement
MANDATORY	2 years of professional experience in Data Analytics, Data Science, Business Intelligence, or Analytics Engineering.
MANDATORY	Strong SQL skills with experience querying, transforming, validating, and analyzing large datasets.
MANDATORY	Hands-on experience with Python and data analysis workflows.
MANDATORY	Experience with AWS and/or cloud-based data environments; dbt experience strongly required.
MANDATORY	Experience developing Power BI and/or Tableau dashboards for KPI reporting.
MANDATORY	Experience with data validation, reconciliation, quality checks, and audit-ready reporting.
MANDATORY	Ability to analyze large datasets (1M+ records) and deliver accurate results within SLA-driven environments.
PREFERRED	Exposure to predictive analytics, Regression, Random Forest, or time-series forecasting.
PREFERRED	Experience with anomaly detection, root-cause analysis, or operational analytics.
PREFERRED	Exposure to Docker, CI/CD, SageMaker, or Great Expectations.
PREFERRED	Prior healthcare analytics experience and/or AWS Cloud Practitioner certification.

Education

Bachelor's degree in Computer Science, Data Science, Information Systems, Business Analytics, Statistics, or a related discipline.

Interview Process

ROUND 1	Kaiser technical panel
ROUND 2	Client manager interview
ROUND 3 • IF REQUIRED	HR compliance and work authorization verification
