

Data Analyst

Technology Consulting / Data & Analytics

CLIENT	Ernst & Young U.S. LLP (EY)	REFERENCE	19076EY90
LOCATION	Dallas, Texas	WORK MODEL	Remote within the U.S.*
ENGAGEMENT	W2 Contract	PROJECT TENURE	18 months*
TARGET EXPERIENCE	1–3 years	PROPOSED START	September 28, 2026*

ROLE FOCUS A hands-on analytics role centered on SQL, Python, data quality, ETL validation, KPI reporting, and BI dashboards -not experimental machine learning.

Engagement Context

EY's Technology Consulting Data & Analytics practice supports clients with data-platform modernization, data supply chains, reporting, analytics, and data-driven operating processes. For this analyst profile, the emphasis is on extracting, validating, transforming, and interpreting client data; supporting recurring reporting; identifying data-quality issues; and translating business requirements into reliable analytical outputs.

Primary Responsibilities

- Extract and analyze operational and business data using SQL and Python.
- Write and maintain SQL queries using joins, CTEs, aggregations, subqueries, and window functions.
- Perform data profiling, cleansing, validation, and reconciliation across source datasets.
- Investigate discrepancies between source data and reporting outputs and document root causes.
- Support ETL and data-integration workflows by validating transformed datasets and downstream reporting outputs.
- Build and maintain Power BI or Tableau dashboards and recurring KPI reports.
- Translate stakeholder reporting requirements into measurable KPIs, data definitions, and reporting logic.
- Conduct exploratory and trend analysis to identify unusual activity, process gaps, and performance changes.
- Automate repetitive reporting and data-validation activities using Python and SQL.
- Prepare analysis-ready datasets for downstream reporting and analytics teams.
- Maintain documentation covering data sources, business rules, transformation logic, and validation procedures.
- Collaborate with business analysts, data engineers, developers, and client stakeholders during requirements clarification and testing.
- Participate in UAT and data validation before reports or analytical datasets are released.

- Escalate material data-quality issues with supporting evidence and impact assessment.

Required Qualifications

AREA	REQUIREMENT
Education	Bachelor's or Master's degree in Information Systems, Computer Science, Data Analytics, Business Analytics, Statistics, or a related field.
Experience	1+ years of professional experience in data analysis, business analytics, or reporting.
SQL	Strong SQL skills, including joins, CTEs, aggregate functions, subqueries, and window functions.
Python	Working knowledge of Python for data manipulation and analysis.
Excel	Hands-on experience with Excel for analytical reporting, PivotTables, and lookup functions.
BI	Hands-on experience with Tableau or Power BI.
Data Quality	Experience performing data cleaning, validation, reconciliation, and exploratory analysis.
Communication	Ability to investigate reporting discrepancies and explain findings to non-technical stakeholders, with strong written documentation and communication skills.

Preferred Qualifications

- PostgreSQL, MySQL, or another relational database experience.
- Exposure to AWS data services, particularly Amazon S3.
- Experience supporting ETL or data-integration processes.
- Experience automating recurring reporting using Python and SQL.
- Exposure to Jira, Git, or an Agile delivery environment.
- Experience working with large or imperfect operational datasets.
- Consulting or client-service experience is preferred, but not mandatory.

Technical Assessment Areas

SQL

- Join selection
- CTEs
- Window functions
- Duplicate identification
- Aggregations
- Data-quality checks
- Query troubleshooting

Python

- Pandas-based data manipulation
- Missing and duplicate records
- Data validation
- Basic automation

Analytics

- KPI definition
- Trend analysis
- Root-cause analysis
- Explaining analytical findings

BI

- Dashboard design
- KPI selection
- Tableau / Power BI usage
- Data-to-visualization workflow

Expected Interview Flow

STAGE	INTERVIEW	PRIMARY FOCUS
ROUND 1	EY screening	Initial fit, experience, communication, availability, and engagement alignment.
ROUND 2	Technical interview	SQL, Python, analytics, data quality, and BI fundamentals.
ROUND 3	Hiring manager / engagement interview	Project fit, stakeholder collaboration, delivery approach, and role expectations.

Work Authorization

W2 employment is required. Candidates must be authorized to work in the United States on a W2 basis for the duration of the contract.

Compensation & Benefits

\$45 - \$58/hour	Target W2 range, depending on location, relevant experience, and client-approved bill rate.
-------------------------	---

- Medical, dental, and vision insurance options.
- 401(k) retirement savings plan, subject to eligibility.
- Paid sick time and applicable paid leave benefits.
- Employee assistance and wellness programs, where applicable.
- Pre-tax healthcare and dependent-care benefit options, where eligible.
- Statutory benefits and applicable state/federal protections.
- Ongoing recruiter and HR support throughout the contract.
- Contract extension opportunities based on project requirements and performance.

Engagement Notes

STAFFING CLASSIFICATION	W2 Contract — vendor terms to be confirmed by the staffing partner.
PROPOSED TENURE	18 months; extension subject to engagement funding, performance, and client demand.
WORK MODEL	Remote within the U.S., subject to client/project approval.
PROPOSED START	September 28, 2026.

Candidate Positioning

The strongest candidates for this role should be able to demonstrate practical ownership of the full analytics workflow: understanding a business question, querying source data, validating and reconciling results, building a clear analytical output, and communicating the result to stakeholders. Candidates should be prepared to discuss concrete examples of SQL troubleshooting, data-quality investigation, dashboard development, and reporting automation.
