

Data Analyst

Manufacturing & Supply Chain Analytics

OPERATIONS ANALYTICS / U.S. MANUFACTURING

LOCATION Malta, NY	ENGAGEMENT W2 Contract	TERM 24 months	START Oct. 1, 2026	RATE \$48-\$60/hr DOE
-----------------------	---------------------------	-------------------	-----------------------	--------------------------

Position Overview

GLOBALFOUNDRIES is seeking a Data Analyst to support manufacturing and supply-chain analytics across operational data environments. The position is responsible for turning high-volume operational data into accurate, timely, and actionable reporting for business and operations stakeholders.

The successful candidate will work across data extraction, validation, KPI reporting, dashboard development, root-cause analysis, and reporting automation. This position is focused on operations analytics and business intelligence; it is not an AI research or semiconductor device-design role.

THE MISSION

Improve operational visibility. Deliver trusted reporting, identify KPI exceptions, investigate data and performance issues, and enable operations teams to make decisions from validated information.

Analytics Scope

01 DATA EXTRACTION SQL queries, relational data, source-system extraction and analysis.	02 DATA QUALITY Cleansing, reconciliation, validation, exception investigation and source-to-report checks.
03 PERFORMANCE KPI monitoring, trend analysis, KPI-miss investigation and root-cause analysis.	04 REPORTING Power BI/Tableau dashboards, recurring reporting, Excel models and Python automation.

What You'll Do

- Extract operational datasets from relational databases and business systems using SQL.
- Clean, reconcile, and validate datasets used for manufacturing and supply-chain reporting.
- Develop recurring reports and dashboards using Power BI and/or Tableau.
- Monitor operational KPIs and identify significant changes, exceptions, and reporting anomalies.
- Perform root-cause analysis on KPI misses and operational performance deviations.
- Prepare daily and weekly analytical reporting for business and operations stakeholders.
- Automate recurring reporting and data-preparation activities using Python/Pandas.
- Develop Excel-based analytical models and reporting templates where required.
- Partner with business users to define reporting requirements and translate them into analytical specifications.

- Validate source-to-report calculations before dashboards or KPI reports are published.
- Investigate discrepancies between operational systems and reporting outputs.
- Document business rules, data definitions, validation procedures, analytical methodology, and reporting logic.
- Support data-quality improvement initiatives across operational datasets.
- Coordinate with data engineering, IT, supply-chain, and manufacturing stakeholders.
- Deliver ad-hoc analysis for specific operational performance questions and investigations.

Required Technical Capabilities

SQL & DATA	Strong SQL capability; experience with joins, aggregations, CTEs and analytical queries; ability to extract and validate operational data.
PYTHON / PANDAS	Working experience using Python/Pandas for data analysis, transformation, validation, and basic reporting automation.
BUSINESS INTELLIGENCE	Hands-on experience with Power BI, Tableau, or an equivalent BI platform; ability to translate data into clear operational dashboards.
EXCEL	Advanced Excel capability, including PivotTables, XLOOKUP/VLOOKUP, data transformation, and analytical reporting.
DATA QUALITY	Practical experience with cleansing, validation, reconciliation, duplicate/missing-data investigation, and reporting consistency.
BUSINESS ANALYSIS	Ability to identify trends, investigate KPI deviations, perform root-cause analysis, and communicate findings to business stakeholders.

Candidate Profile

Candidates should bring an analytical mindset, strong attention to data accuracy, and the ability to work comfortably with imperfect operational datasets. The role requires clear communication with business and operations stakeholders and a disciplined approach to documentation, validation, and reporting consistency.

EDUCATION	Bachelor's or Master's degree in Information Systems, Computer Science, Data Analytics, Statistics, Engineering, or a related discipline.
EXPERIENCE	1+ year of experience in data analysis, business intelligence, operations analytics, or reporting.
OPERATIONS	Exposure to manufacturing, supply chain, logistics, or procurement analytics is valuable.
COLLABORATION	Ability to work with business users, data engineering, IT, supply-chain, and manufacturing stakeholders.

Preferred Experience

• Oracle, SAP, or another enterprise operational database.	• Alteryx or comparable data-preparation tooling.
• Recurring operational dashboard development.	• AWS or cloud-based data environments.

- Git, Jira, or Agile project delivery.

- Semiconductor or manufacturing experience — preferred, but not required for an entry-level analytics profile.

Working Environment

This position operates in a data-intensive manufacturing and supply-chain environment. Candidates should be comfortable working with high-volume operational datasets, multiple source systems, KPI and exception reporting, manufacturing terminology, data-quality investigations, and business users who require timely and accurate reporting.

Assignment & Staffing Information

TARGET W2 RATE \$48–\$60/hour		DOE Rate is subject to relevant experience, location, client-approved bill rate, and applicable staffing terms.
EMPLOYMENT	W2 Contract	
PROPOSED TERM	24 months	
PROPOSED START	October 1, 2026	
WORK MODEL	Remote — subject to client approval and data-access restrictions	
PRIMARY U.S. LOCATION	Malta, New York / U.S. manufacturing operations	
EXPERIENCE TARGET	0-2 years analytics experience	

W2 Benefits

- Medical, dental, and vision insurance options.
- 401(k) retirement savings plan, subject to eligibility.
- Paid sick time and applicable paid leave benefits.
- Employee assistance and wellness programs, where applicable.
- Pre-tax healthcare and dependent-care benefit options, where eligible.
- Statutory benefits and applicable state/federal protections.
- Ongoing recruiter and HR support throughout the contract.
- Contract extension opportunities based on project requirements and performance.

Work Authorization

Candidates must have valid U.S. employment authorization for the duration of the assignment. Accepted categories are subject to the staffing employer's compliance review and the specific GF program requirements. Sponsorship or transfer is not guaranteed and must be confirmed before submission.
