SUMMARY

Data Analyst with **4+ years** of experience delivering healthcare and banking analytics solutions across patient care, DME/HME operations, digital onboarding, transactions, lending, and regulatory reporting. Built scalable data pipelines, semantic models, dashboards, and predictive analytics solutions that improved data accuracy to 98%, reduced reporting time by 38%, and automated 10+ hours of weekly effort. Experienced in translating complex operational data into actionable insights through statistical analysis, A/B testing, forecasting, and AI-assisted reporting. Proven ability to maintain HIPAA, PHI, AML and KYC controls while supporting business and executive decision-making.

TECHNICAL SKILLS

Programming & Data Analysis: Python, SQL, R, Pandas, NumPy, SciPy, Statsmodels, SQLAlchemy, OpenPyXL, Exploratory Data Analysis, Data Cleaning, Data Wrangling, Data Validation, Feature Engineering

AI & Machine Learning for Analytics: Predictive Analytics, Regression, Classification, Clustering, Scikit-learn, XGBoost, Cross-Validation, Hyperparameter Tuning, Model Evaluation, SHAP, Microsoft Copilot, LLM-Assisted Insights, Prompt Engineering

Business Intelligence & Visualization: Power BI, Tableau, Matplotlib, Seaborn, Advanced Excel, DAX, Power Query, KPI Reporting

SQL & Databases: Advanced SQL, T-SQL, SQL Server, MySQL, PostgreSQL, Oracle, CTEs, Joins, Subqueries, Stored Procedures

Statistical & Business Analytics: Hypothesis Testing, A/B Testing, Cohort Analysis, Trend Analysis, Root-Cause Analysis, Ad Hoc Analysis

Cloud & Data Platforms: AWS (S3, Glue, Lambda, Redshift, SageMaker), Azure Synapse Analytics, Snowflake

Data Integration & Modeling: Data Warehousing, Fact and Dimension Tables, Data Reconciliation, Data Quality, Data Governance

WORK EXPERIENCE

Apria Healthcare, USA | Data Analyst

Aug 2025 – Present

- Addressed fragmented **DME/HME patient-service data** by developing **SQL and Python ETL workflows** with **AWS S3, AWS Glue** integrating referral, eligibility, authorization, prescription, delivery, resupply and claims records with **98% reconciliation accuracy**.
- Engineered **Power BI semantic models** for **Sleep Care** using star-schema tables, **Power Query, DAX measures, and calculated columns**, enabling drill-down analysis of CPAP setup, mask resupply, adherence, referral conversion, and therapy discontinuation.
- Analyzed home oxygen, ventilator, and **COPD Respiratory Care** workflows using **CTEs, window functions, stored procedures, cohort analysis, and root-cause analysis**, reducing delayed equipment fulfillment by **14%**.
- Built automated validation rules to reconcile **ICD-10, HCPCS, CMN, payer authorization, NPWT, utilization, and claims data**, lowering Wound Care documentation exceptions and avoidable denials by **12%**.
- Developed predictive models using **Amazon SageMaker, Pandas, NumPy, Scikit-learn, XGBoost, and SHAP** to forecast resupply demand, medication refills, delivery delays, and denial risk, improving accuracy by **15%**.
- Automated exception detection and **LLM-assisted reporting** with Power Automate, Advanced Excel and Microsoft Copilot, saving 10+ hours weekly while enforcing HIPAA, PHI, data-quality, and role based access controls.

Infogain, India | Data Analyst

Feb 2022 – Jul 2024

- Centralized fragmented banking data by building **Python and SQL ETL pipelines** with Pandas, NumPy, SQLAlchemy, Azure Synapse, and Snowflake, integrating onboarding, KYC, account, transaction, deposit, loan, and payment records.
- Improved KPI visibility by developing **Power BI dashboards** with DAX, Power Query, star schemas, and row-level security to monitor deposit growth, transaction volume, delinquency, onboarding, and retention.
- Accelerated reporting by optimizing **CTEs, joins, window functions, stored procedures, incremental loads, and Snowflake clustering**, reducing dashboard-query time by 38%.
- Addressed application abandonment through funnel, cohort, segmentation, and A/B testing with **SciPy and Statsmodels**, uncovering verification and activation bottlenecks that increased digital onboarding by **11%**.
- Investigated transaction failures, customer attrition, and branch performance through **ad hoc, variance, and root-cause analyses** with **Matplotlib and Seaborn**, reducing recurring operational exceptions by **14%**.
- Automated transaction-to-ledger reconciliation and data-quality reporting with OpenPyXL, Power Automate, and Advanced Excel, saving 12+ hours weekly while strengthening AML and KYC controls.

PROJECTS

Digital Trust & AI Misinformation | Data Integrity Pipeline

- Built an end-to-end text analytics pipeline using **Python, Pandas, Hugging Face Transformers, and LLMs** to extract, clean, validate, and classify **25,000+ unstructured digital records** for AI-generated content and misinformation risk.
- Developed interpretable **Logistic Regression and Decision Tree** models with tokenization, feature extraction, class balancing, cross-validation, and confusion-matrix analysis, achieving a **94% F1-score** and improving stakeholder interpretability by **40%**.

FinRisk 360 | Full-Stack Credit Risk & ETL Pipeline

- Developed a credit-risk solution using **Python, Scikit-learn, and Random Forest**, processing **50,000+ financial records** through validated ETL workflows and loading standardized borrower and loan data into a **star-schema warehouse**.
- Deployed risk scoring through **Docker, FastAPI, and SQL** and integrated curated datasets with **Power BI** dashboards for default probability, delinquency, loan exposure, portfolio segmentation, and **What-If stress testing**.

EDUCATION

- Master of Science in Data Science** – University of Texas at Arlington and Arlington, Texas, USA
- Bachelor of Engineering in Information Technology** – Savitribai Phule Pune University and Pune, India
