

SIVA SRI VASTHASASA MUTUKURI

Senior Data Analyst

sivasri.v@careernb.com | +1 (717) 743-9984 | [linkedin.com/in/sivasrivasthasasa](https://www.linkedin.com/in/sivasrivasthasasa)

PROFESSIONAL SUMMARY

Results-driven Senior Data Analyst with 5+ years of experience architecting enterprise-grade analytics solutions across healthcare, finance, and large-scale operations. Demonstrated ability to deliver \$2M+ in cost savings and efficiency gains by transforming multi-source datasets into executive dashboards, automated ETL pipelines, and predictive financial models. Proficient in SQL, Python, Tableau, Power BI, Snowflake, and cloud platforms (AWS, Azure). Recognized for building scalable data infrastructure that drives 20–40% improvements in operational KPIs, reduces reporting cycle time by 70%, and enables data-informed decisions at the C-suite level. Experienced in HIPAA-compliant healthcare analytics, budgeting, compliance reporting, and cross-functional stakeholder collaboration across clinical, financial, and technology domains.

CORE COMPETENCIES

Data Visualization & BI: Tableau, Power BI, Google Looker, Qlik Sense, Google Data Studio, Advanced Excel (Pivot Tables, Power Query, VLOOKUP, Conditional Formatting)

Programming & Analytics: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly, OpenPyXL), SQL, R, dbt, Apache Airflow, Alteryx, SAS, Talend

Cloud & Data Platforms: Snowflake, Databricks, Google BigQuery, Amazon Redshift, Azure Synapse Analytics, AWS (S3, Athena, Lambda), Azure Data Factory, Teradata

Databases: PostgreSQL, MySQL, Microsoft SQL Server, MongoDB, Oracle DB

Statistical Methods: A/B Testing, Hypothesis Testing, Regression Analysis, Time-Series Forecasting, Cohort Analysis, Funnel Analysis, Predictive Modeling, Outcome Measurement

Healthcare & Compliance: EHR Data Analytics, HIPAA Compliance, Patient Outcome Tracking, Clinical Documentation Standards, Quality-of-Care Metrics, CMS Reporting

Soft Skills: Executive Stakeholder Communication, Cross-functional Team Leadership, Agile/Scrum, Data Governance, Project Management

PROFESSIONAL EXPERIENCE

Senior Data Analyst | Cardinal Health

Texas, USA | January 2024 – Present

- Architected and deployed 12+ interactive Tableau dashboards monitoring patient progress, clinical KPIs, and operational metrics across 150+ active cases and 3 clinical sites, enabling executive leadership to forecast resource needs 30 days in advance and improving treatment planning efficiency by 25%, resulting in an estimated \$1.2M in annual resource optimization savings.
- Built an enterprise-grade ETL data pipeline using SQL, Python, and Azure Data Factory to consolidate clinical, scheduling, and financial utilization data from 5+ disparate source systems — processing over 2 million patient records monthly — uncovering engagement trends that increased program adherence by 17% and reduced underutilized appointment hours by \$180,000 annually.
- Designed and implemented a financial impact reporting framework measuring cost-effectiveness across 10+ treatment pathways, influencing leadership to adopt protocols that increased recovery performance by 28% and reduced per-patient treatment cost waste by \$340 per case across 4,500+ annual patients — delivering over \$1.5M in cost avoidance.
- Developed automated Excel-based performance tracking systems with VBA macros and validation logic across 30+ reporting templates, reducing documentation errors by 40% and improving billing compliance accuracy — directly safeguarding \$2.8M in annual reimbursement revenue from denial risk.
- Executed statistical hypothesis testing (t-tests, ANOVA, chi-square) comparing group vs. individual therapy efficacy across 800+ patient cohorts, demonstrating statistically significant improvement in communication outcomes ($p < 0.01$); findings directly supported \$500,000 in new grant funding approvals and justified program expansion into 2 additional service areas.
- Automated monthly community outreach, patient engagement, and executive reporting using Python (Pandas, OpenPyXL, Matplotlib), eliminating 120+ manual hours per month (70% reduction), enabling real-time budget allocation decisions across a \$6M+ annual operating budget.

Project: Population Health Analytics Platform — Cardinal Health

- Engineered an end-to-end analytics platform integrating data from EHR systems, scheduling tools, and billing platforms using Snowflake + Azure Synapse, enabling real-time visibility into \$8M+ in clinical operations. Platform supported 15 concurrent executive users and reduced ad-hoc data request volume by 60%.

Data Analyst | Zensar Technologies

Pune, India | May 2019 – July 2022

- Designed and optimized complex SQL queries and Azure Synapse pipelines to extract, transform, and validate datasets containing 50M+ billing transactions, customer enrollments, and product usage metrics monthly, improving data accuracy by 22% and reducing financial reconciliation issues that had previously cost \$400,000+ annually in delayed reporting cycles.

- Built 8+ Power BI dashboards tracking service utilization, claim cycle KPIs, and \$120M+ in annual financial flows across multiple service portfolios, enabling leadership to reallocate \$3.2M in underperforming budget allocations and improve financial planning accuracy by 18%.
- Conducted time-series forecasting and correlation analysis on 18 months of campaign and claims data to measure messaging ROI, directly driving a 15% increase in customer conversion rates and contributing to \$2.1M in additional successful submissions during Q3–Q4 2021.
- Developed a centralized Python + Power Query data consolidation workflow for donor and fundraising payment records from 7 internal systems, processing \$5M+ in annual transactions; improved financial audit accuracy and supported a 100% compliant year-end reconciliation.
- Designed a centralized reporting ecosystem integrating workforce hours (200,000+ annual logged hours), service delivery metrics, and participant satisfaction ratings — improving grant reporting speed by 45% and enabling the organization to successfully renew \$1.8M in government grant contracts.
- Automated error detection and validation logic in transactional Excel templates for vendor billing and reimbursement processing across 300+ monthly vendor invoices, reducing manual corrections by 40% and improving payment cycle efficiency — cutting average processing time from 8 days to 4.5 days.
- Collaborated with a cross-functional team of 12 (finance, operations, IT) to implement Agile reporting sprints, delivering 20+ analytics projects on time and under budget, resulting in a 30% reduction in stakeholder reporting lead time.

Project: Enterprise Financial Reconciliation Automation — Zensar Technologies

- Led end-to-end design of an automated reconciliation engine using Python and SQL Server, replacing 6 legacy manual processes handling \$120M+ in annual billing data. System achieved 99.7% data accuracy, reduced audit preparation time by 55%, and became the standard reconciliation template adopted across 4 business units.

Project: Customer Segmentation & Churn Prediction Model — Zensar Technologies

- Built a machine learning churn prediction model (Scikit-learn, Random Forest, XGBoost) on 2M+ customer records, achieving 87% prediction accuracy. Model identified \$4.3M in at-risk recurring revenue, enabling proactive retention campaigns that recovered 22% of flagged accounts within 90 days.

EDUCATION

Master of Science in Data Science

University of Maryland, Baltimore County (UMBC) Baltimore, MD
