U.S. Citizen, GC, or EAD

IDEAL CANDIDATE PROFILE

Senior QA/SDET Leader with hands-on framework ownership across Java/Python, Selenium, REST API, Advanced SQL, CI/CD, and high-volume healthcare distribution systems. Must have personal experience designing enterprise QA architecture.

EVALUATION STAGES

- **Round 1:** Tech Screening (Tech System)
- **Round 2:** Hands-on QA Team Technical
- **Round 3:** Sr. Architecture & Integration
- **Round 4:** Hiring Manager & Leadership
- **Final:** Client Compliance & Onboarding

CARDINAL HEALTH

Senior QA Automation Engineer

Healthcare Distribution & Enterprise Technology

PROGRAM CONTEXT & ENGINEERING SCOPE

Cardinal Health is seeking a Senior QA Automation Engineer to provide technical ownership of quality automation across high-volume healthcare distribution, pharmaceutical, and medical-product platforms. This role spans order management, inventory, fulfillment, and complex enterprise integrations.

TRANSACTION LIFECYCLE COVERAGE:

Requirement → App UI → REST API → SQL DB → Enterprise Integration → Transaction Result

CORE RESPONSIBILITIES & OWNERSHIP

- Architect, build, and maintain enterprise test automation frameworks (Java/Python, Selenium WebDriver, API automation).
- Automate end-to-end transactional workflows across order management, inventory, and healthcare distribution logistics.
- Develop automated REST API integration test suites (REST Assured / Postman) and validate backend microservices.
- Perform backend data verification using complex SQL queries across relational transactional databases.
- Integrate automated test suites into CI/CD pipelines (Jenkins, Azure DevOps, GitLab CI) for continuous release validation.
- Perform root-cause analysis on test failures across code, data, environment, and infrastructure layers.
- Establish risk-based automation priorities and review production defects to enhance regression suite coverage.
- Mentor junior QA engineers, enforce code review standards, and stabilize flaky automated tests.

TECHNICAL & DOMAIN COMPETENCIES

Core Technical Requirements:

- 12+ years of QA Quality Engineering / SDET leadership experience.
- Advanced Java and/or Python programming & OOP design.
- Selenium WebDriver & Page Object Model (POM) architecture.
- REST API automation, TestNG/JUnit, Git, and complex SQL

data validation.

- CI/CD implementation experience (Jenkins, Azure DevOps, GitLab CI).

Domain & Preferred Expertise:

- Healthcare / Pharma distribution, OMS, IMS, Supply Chain & Logistics.
- BDD (Cucumber/Gherkin), Playwright, Docker, JMeter, Postman, REST Assured.
- Regulated data compliance, security protocols, and enterprise messaging systems.

SECURITY & DATA GOVERNANCE

Strict adherence to Cardinal Health data policies is required. Only authorized synthetic test data may be used in non-production environments. Unapproved production data or sensitive PHI/PII testing is strictly prohibited. Full compliance with client credential handling and security training is mandatory.
