EDUCATION

Bowling Green State University
Master of Science in Computer Science

Bowling Green, OH
Aug. 2024 – May 2026

EXPERIENCE

Data Engineer (Contract)
IQVIA

Jan. 2026 – Present
Durham, United States

- Designed and maintained scalable cloud-based ETL/ELT pipelines using Python, PySpark, SQL, and Databricks to integrate 1.5 GB/day of healthcare claims, EHR, and pharmacy data into reliable datasets, reducing delivery time from 7 hours to 2 hours.
- Built scalable data lake architecture and data models using Bronze/Silver/Gold patterns and Delta Lake for high-volume healthcare data, applying partitioning and optimization techniques that reduced query runtime by 35%.
- Implemented automated data quality, validation, and monitoring processes across 15 production tables to improve data accuracy, consistency, completeness, and accessibility for downstream analytics and research workflows.
- Orchestrated 20+ production data pipelines with Apache Airflow using SLA monitoring, retry logic, dependency management, and automated alerting; troubleshooted data issues and collaborated with technical stakeholders to resolve discrepancies.

Intern
Cognit AI Inc.

Jan. 2025 – Apr. 2025
Elizabeth City, United States

- Built Python and SQL ETL pipelines integrating 2 internal APIs, automating data ingestion, transformation, validation, and loading workflows while reducing manual processing steps from 4 to 1 per ingestion run.
- Cleaned, profiled, standardized, and transformed 7 multi-source datasets using null handling, deduplication, schema normalization, and validation to produce high-quality datasets for downstream analytics and model training.
- Implemented automated data quality checks using row-count validation, null thresholds, and schema conformance checkpoints across pipeline stages, reducing recurring ingestion failures and improving pipeline reliability.

Software Engineer
Wipro

Feb. 2022 – Jun. 2024
India

- Built and optimized star-schema data warehouses in SQL Server using complex SQL, window functions, CTEs, stored procedures, fact and dimension structures, reducing report query time from 60 seconds to 35 seconds for downstream reporting.
- Developed data validation and reconciliation processes across 6 production pipelines, reducing data reliability incidents from 15 to 4 per quarter through systematic troubleshooting, root cause analysis, and workload optimization.
- Automated ingestion and transformation of JSON, XML, and text data supporting a customer-churn risk-scoring model, enabling 2 new data sources to feed downstream analytical workflows without manual preprocessing.
- Migrated legacy ETL workloads to AWS using S3, EC2, Glue, and Redshift, redesigning cloud data processing and storage workflows while reducing storage costs by 10%.

PROJECTS

MotelIQ – Motel Analytics Platform

2025 – 2026

- Built an end-to-end data analytics platform using Python, Pandas, DuckDB, and SQL to ingest, profile, cleanse, standardize, transform, and analyze structured operational datasets for reliable reporting.
- Implemented data quality checks, deduplication, schema standardization, validation, and analytical transformations to convert raw data into consistent and accessible datasets for downstream analysis.
- Developed an interactive Streamlit and Plotly application to visualize operational data, trends, and KPIs and communicate analytical findings through accessible data visualizations.

Real-Time Data Processing Pipeline

2025

- Built a real-time data ingestion and processing pipeline using Apache Kafka, PySpark, Spark SQL, Docker, and PostgreSQL to process streaming data and support scalable analytical workloads.
- Implemented schema validation, transformation logic, checkpointing, and automated data quality checks to identify anomalous or invalid data and improve pipeline reliability and dependency handling.
- Configured reproducible development and testing environments with Docker while using Git for version control and maintainable data engineering workflows.

TECHNICAL SKILLS

Languages: Python, SQL, Bash, Java

Data Engineering: ETL, ELT, Data Pipelines, Data Warehousing, Data Modeling, Data Quality, Data Validation, Data Profiling, Data Transformation, Data Ingestion, dbt

Data Platforms: Databricks, Delta Lake, Snowflake, PostgreSQL, SQL Server, DuckDB, Redshift

Big Data: PySpark, Apache Spark, Spark SQL, Hadoop, HDFS, Hive, Kafka

Cloud: AWS S3, AWS Glue, AWS Redshift, AWS EC2, AWS IAM, Azure, GCP

Orchestration: Apache Airflow, dbt

Development: Docker, Git, GitHub, Linux, Jupyter, Pandas, NumPy, Streamlit, Plotly
