

SOFTWARE ENGINEER I

Java / API & Digital Banking Applications

ENGAGEMENT	INITIAL TERM	EXPERIENCE	TARGET RATE	WORK MODE
W2 Contract with C2H Possibility	18 Months	0-3 Years	\$46-\$52/hr	Onsite – Allen, TX

POSITION OVERVIEW

Credit Union of Texas (CUTX) is seeking an early-career Software Engineer to support development, integration, and maintenance work across member-facing and internal financial applications. The role sits within the application-development team and operates under the direction of senior developers and technical leads — it is not a standalone or purely coding-focused position, and involves regular collaboration across application code, APIs, databases, testing, and production support.

CUTX's development environment integrates with a range of internal and third-party platforms, including systems such as Salesforce, DocuSign, TransUnion, Banno, Alkami, and Episys, within an Agile/Scrum delivery model.

KEY RESPONSIBILITIES

- Develop enhancements to backend services and web applications under the direction of senior developers and technical leads.
- Work with Java-based application code, APIs, and enterprise integrations.
- Create and modify RESTful service endpoints and support data exchange between internal and external systems.
- Troubleshoot defects across application code, APIs, and relational databases.
- Write SQL queries for application support, validation, and troubleshooting.
- Participate in Agile ceremonies, including sprint planning, daily stand-ups, backlog refinement, and retrospectives.
- Translate business requirements into implementable development tasks.
- Write unit tests and assist QA with regression testing for application changes.
- Participate in peer code reviews and follow established coding standards.
- Investigate application logs and reproduce defects reported from QA or production.
- Assist with secure coding practices and remediation of issues identified during testing or review.
- Support API/OAuth integrations, including investigation of failed requests, authentication issues, and data-mapping problems.
- Maintain concise technical documentation for application changes and integrations.
- Assist with deployment and release activities through the team's established development pipeline.
- Escalate production-impacting issues with sufficient technical detail for senior engineers and application owners.

REQUIRED QUALIFICATIONS

- 0–3 years of professional software-development experience, including relevant internship, co-op, or graduate-project work.
- Java programming experience.
- Solid understanding of object-oriented programming principles.
- Experience or academic/project exposure to Spring or Spring Boot.
- Understanding of REST APIs and HTTP request/response concepts.
- SQL and relational-database fundamentals.
- Git / version-control experience.
- Ability to read and modify code within an established, existing application — not only build standalone projects.

TECHNOLOGY DELIVERY REQUISITION

- Bachelor's or Master's degree in Computer Science, Computer Engineering, Software Engineering, or a closely related field, or equivalent technical experience.

PREFERRED QUALIFICATIONS

- Java + Spring Boot project experience.
- Experience with React, Angular, or another modern front-end framework.
- Azure or Azure DevOps exposure.
- API integration experience, including OAuth/API authentication familiarity.
- Microsoft SQL Server or another enterprise relational database.
- Exposure to CI/CD pipelines and automated testing.
- Internship or project experience in banking, financial services, payments, insurance, or another regulated industry.
- Familiarity with Agile/Scrum development practices.

INTERVIEW PROCESS

1. CUTX Engineering Interview	Java/OOP fundamentals, Spring Boot basics, REST APIs, SQL, debugging, Git, and a discussion of the candidate's most recent project, Scenario-based discussion with engineering representatives - tracing an API failure, identifying a database issue, structuring a small Java service, and testing a change.
2. Practical Assessment	May include a short coding exercise, code-review scenario, or debugging exercise, depending on the interviewing team.
3. Client Decision & Onboarding	Reference and compliance checks, followed by W2 onboarding and project-specific access provisioning.

ENGAGEMENT DETAILS

LOCATION	Allen, TX 75013
WORK MODE	Onsite collaboration based on team schedule
TARGET START DATE	September-end, 2026
EXPECTED END DATE	March, 2028
EXTENSION	Possible, based on application roadmap, budget, and performance

COMPLIANCE & WORK AUTHORIZATION

This is a W2 staffing engagement subject to client approval, background screening, employment verification, and completion of required onboarding documentation. As a financial-services organization, CUTX maintains heightened standards around data confidentiality, application security, access controls, and production-change discipline.

Work authorization: U.S. Citizen, Green Card holder, OPT/STEM OPT, H-4 EAD, and H-1B transfer candidates may be considered where permitted by the staffing arrangement and client onboarding requirements. Authorization must be verified prior to submission.

PROJECT FOCUS

Java application development • REST APIs • SQL troubleshooting • enterprise integrations • production support
