

ARUN KOTHANDARAMAN

Data Analyst | Business Intelligence Analyst | Product Analyst | BI Analyst

+1 928-390-5441 | arunsep95@gmail.com | Flagstaff, AZ, USA | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven Data Analyst with 5+ years of experience supporting business case development and delivering actionable insights across retail, product, marketing, and operations domains. Expert in SQL and Python for Statistical Analysis and Data Quality Management, with a proven ability to lead Cross-functional Collaboration between technical and business stakeholders. Skilled in Stakeholder Management, Data Lifecycle Management, and translating complex datasets into clear recommendations that drive business outcomes. Currently completing MS in Business Analytics at NAU (GPA 4.0), authorized to work immediately on F1 OPT, STEM eligible.

CORE COMPETENCIES

SQL Development | Data Warehousing | ETL Pipelines | Predictive Modeling | Experimentation Design | A/B Testing | KPI Reporting | Dashboard Automation | Data Governance | Business Requirements Gathering | Stakeholder Reporting | Executive Reporting | Customer Segmentation | Churn Modeling | Forecasting Models | Cross-Functional Collaboration

TECHNICAL SKILLS

Languages & Querying: SQL (PostgreSQL, MySQL), Python (Pandas, NumPy, Scikit-learn), R (tidyverse, ggplot2)

Analytics & Statistics: A/B Testing, Hypothesis Testing, Regression, Clustering (K-Means), Churn Modeling, Time Series Forecasting, Customer Segmentation, Ad Hoc Analysis

BI & Visualization: Tableau, Power BI, Excel (Pivot Tables, VBA/Macros, Power Query), KPI Dashboards, Data Storytelling, Executive Presentations

Data Engineering: ETL Pipelines, Data Modeling, Snowflake, AWS Redshift, PostgreSQL, Apache Spark (familiar)

Tools & Platforms: Git, RapidMiner, Jupyter Notebook

PROFESSIONAL EXPERIENCE

Teaching Assistant | Python for Business Analytics | Northern Arizona University **Aug 2025 to May 2026**

Flagstaff, AZ

- Led weekly technical labs for 40+ MS Analytics students in Python (Pandas, NumPy, Scikit-learn), covering EDA and predictive modeling, helping students apply analytics techniques to real-world data and receive positive feedback on their skill development.
- Redesigned grading rubrics for analytics projects, cutting evaluation turnaround by 30% while maintaining consistent, high-quality feedback across a cohort of 40+ graduate students.

Business Analyst | Asian Metal Finishers

Jun 2020 to Aug 2024

Chennai, India

- Stakeholder Management & Requirements Gathering:** Partnered with cross-functional department heads to define key performance indicators (KPIs), translating complex business needs into a centralized reporting infrastructure.
- Data Lifecycle Management:** Owned the end-to-end data pipeline, from writing complex SQL queries for raw production datasets to delivering automated Power BI dashboards and Python-based automation tools.
- Operational Efficiency:** Eliminated manual reporting workflows through VBA/Macro and Python integration, recovering 30% of team capacity and increasing production throughput by 11% through trend and variance analysis.
- Strategic Planning:** Developed Python-driven demand forecasting and inventory models to replace qualitative scheduling, significantly reducing supply chain risks related to overstock and stockouts.

Data Analyst | Mobile Premier League (MPL) Games**Feb 2019 to Feb 2020**

Bengaluru, India

- **Product Analytics & Roadmap Influence:** Analyzed feature engagement patterns across millions of user sessions to surface behavioral insights that directly informed product roadmap decisions, contributing to a 12% improvement in core revenue metrics.
- **Advanced SQL & Data Governance:** Independently owned player economy analysis on Snowflake, utilizing complex SQL (Window Functions, CTEs) to identify monetization leaks and ensure data integrity across millions of records.
- **Predictive Modeling for Retention:** Engineered a Random Forest churn prediction model (80% accuracy) and collaborated with the marketing team to translate predictions into automated retention triggers, improving retention by 5% in one quarter.
- **Revenue Optimization:** Quantified the impact of user behavior on monetization, leading to strategic adjustments that resulted in a 12% annual revenue uplift.

Associate Data Analyst | GSN Games**Oct 2017 to Feb 2019**

Bengaluru, India

- **Customer Segmentation & LTV:** Segmented 1M+ users using K-Means Clustering in R to identify high-LTV personas previously invisible to marketing, enabling targeted campaigns that lifted feature adoption by 14%.
- **Experimental Design & A/B Testing:** Owned end-to-end A/B testing for in-game campaigns; designed experiments, performed statistical significance testing, and delivered findings to product teams to reduce decision time from weeks to days.
- **BI Dashboarding & Data Storytelling:** Developed a real-time Tableau self-serve dashboard on PostgreSQL to provide live visibility into monetization KPIs, reducing executive response time by 50%.
- **Cross-functional Reactivation:** Partnered with Growth teams to develop SQL-driven reactivation pipelines, utilizing behavioral signals to improve purchase frequency and reactivation rates for dormant users.

Data Analyst Intern | Mirraw (Fashion E-Commerce)**Jun 2017 to Aug 2017**

Mumbai, India

- Used SQL to query purchase transaction data and built an Apriori association rule mining model in Python that surfaced high-impact cross-sell opportunities and improved basket size.

EDUCATION**Northern Arizona University | W.A. Franke College of Business** | Flagstaff, AZ**Jan 2025 to May 2026**

M.S. in Business Analytics | GPA: 4.0

Relevant Coursework: Descriptive & Marketing Analytics, Statistical Modeling, Business Intelligence, Machine Learning

- Led ML modeling for Mountain Line Bus System analysis (1.42M records, 14 routes), XGBoost model achieved RMSE of 1.553, outperforming 3 competing models and identifying 4,594 unserved riders at peak hours.

Aegis School of Business (IBM Certified) | Mumbai, India**2016 to 2017**

Post Graduate Program in Data Science, Big Data & Business Intelligence

- Built a churn prediction model for telecom data using Decision Trees, identified at-risk customer segments to enable proactive retention strategies before revenue was lost.
- Applied Logistic Regression in R to classify clinical diagnostic data, improved predictive accuracy for patient outcome analysis, demonstrating ability to apply ML across diverse, high-stakes domains.

Anna University | College of Engineering Guindy | Chennai, India**2012 to 2016**

B.E. in Mechanical Engineering | CGPA: 6.5 (First Class)
