

★ MACY'S TECHNOLOGY ★

PYTHON DEVELOPER

Technology Applications — Entry / Early Career

CLIENT Macy's, Inc.	WORK LOCATION Atlanta, GA	WORK ARRANGEMENT 100% Remote
EMPLOYMENT TYPE W2 Contract	LEVEL Entry / Early Career	REQUIRED EXPERIENCE 0-2 Years
CONTRACT TERM 24 Months	ANTICIPATED START October 5, 2026	ANTICIPATED END October, 2028
EXTENSION Possible, subject to funding & performance	REQUISITION ID MACY-2026-82609	WORK AUTHORIZATION USC, GC, Valid EAD (valid through project)

ROLE PURPOSE

Macy's Technology supports the company's large-scale digital retail and omnichannel environment, including customer-facing digital experiences, merchandising, supply-chain and enterprise technology.

This requirement is intended for an early-career Python developer who can work within an established engineering team and contribute to production application development, API/service development, data processing and automated testing.

The position is not structured as an independent greenfield developer role. The engineer will work from existing application standards, repositories, CI/CD processes and technical direction provided by senior engineers.

CORE RESPONSIBILITIES

- ★ Develop and enhance Python backend services supporting Macy's digital commerce and omnichannel retail applications.
- ★ Implement application logic for workflows involving products, pricing, inventory availability, customer orders and fulfillment status.
- ★ Develop and maintain REST APIs used by web/mobile applications and internal retail services to retrieve and exchange product, order and inventory information.
- ★ Consume existing enterprise APIs and services and transform their responses into application-specific data required by assigned retail workflows.
- ★ Write Python routines to validate, transform and process product, inventory and order-related data received from upstream systems.
- ★ Develop SQL queries to retrieve and validate application data and assist with investigation of discrepancies between application and database records.
- ★ Support changes to existing services that participate in the online order-to-fulfillment flow, including identifying and correcting application-level issues affecting assigned functionality.
- ★ Implement validation and error-handling logic for API requests, responses and data-processing operations.
- ★ Create and maintain unit tests and integration tests for Python services and API changes before deployment to higher environments.
- ★ Investigate defects identified during QA or integration testing by tracing the flow between the API, application logic and underlying database/service dependencies.

- ★ Use application logs and existing monitoring tools to troubleshoot failures in development, test and production-support situations.
- ★ Participate in code reviews with senior Macy's engineers and incorporate review findings before code is promoted.
- ★ Work within the team's Git-based development and CI/CD process, including branch management, pull requests, automated testing and controlled deployment.
- ★ Work from assigned Agile stories containing retail/business acceptance criteria and translate those requirements into application changes.
- ★ Coordinate with QA, business analysts and senior engineers when a change affects multiple retail applications or downstream services.
- ★ Support release validation and resolve application defects associated with assigned production releases.
- ★ Maintain technical documentation for APIs, service behavior, data mappings and implementation changes.
- ★ Follow Macy's requirements for application security, access control and appropriate handling of customer and transactional information.

REQUIRED QUALIFICATIONS

Non-Negotiable

- ★ 0-2 years of software development experience with demonstrated hands-on programming experience.
- ★ Strong working knowledge of Python 3.
- ★ Demonstrated ability to write Python code using functions, classes, collections, exception handling and modular application structure.
- ★ Experience developing or consuming REST APIs.
- ★ Working knowledge of JSON, HTTP methods and HTTP status codes.
- ★ Working knowledge of SQL, including joins, filtering, aggregation and basic data validation.
- ★ Experience with Git and standard pull-request/code-review workflows.
- ★ Understanding of unit testing and debugging of application code.
- ★ Ability to work within an existing application/codebase and make changes to established functionality.
- ★ Understanding of basic application integration concepts, including APIs, databases and downstream/upstream services.
- ★ Familiarity with Agile/Scrum software delivery.
- ★ Bachelor's degree in Computer Science, Computer Engineering, Information Technology or a closely related discipline, or equivalent practical development experience.

Preferred

- ★ Python experience involving e-commerce, retail, order management, inventory or fulfillment systems.
- ★ Experience building APIs for applications that process orders, products, inventory or customer transactions.
- ★ Experience working with transactional or operational databases.
- ★ Exposure to microservices or service-oriented applications.
- ★ Exposure to AWS/cloud-hosted applications.
- ★ Docker/container fundamentals.
- ★ CI/CD experience using Jenkins, GitHub Actions, GitLab CI, Azure DevOps or comparable tooling.
- ★ Experience with automated API testing.
- ★ Exposure to Kafka or another messaging/event-streaming platform.
- ★ Experience troubleshooting applications using centralized logs or application-monitoring tools.
- ★ Internship, academic or project experience involving a Python + REST API + SQL application.

COMPENSATION

Bill Rate	\$42.50 – \$46.00 / hour W2, depending on experience, technical assessment and location requirements.
Approx. Annualized	\$88,400 – \$95,680 at 2,080 hours, before applicable W2 deductions/benefits.

Compensation should not be represented as being set for H-1B purposes. Future H-1B sponsorship/filing eligibility is a separate immigration and employer-compliance determination and cannot be guaranteed by the hourly rate.

BENEFITS

- ★ Healthcare & Wellness
- ★ 401(k) Plan
- ★ Discounts & Perks
- ★ Time Off & Workplace Support
