

Senior .NET Full Stack Developer

Client: Macy's, Inc.

Location: Atlanta, Georgia

Job Type: Full-Time / Contract

Experience Level: Senior (8+ Years)

Industry: Retail / Enterprise Technology

Position Overview

Macy's, Inc. is seeking an experienced Senior .NET Full Stack Developer to design, develop, enhance, and maintain enterprise web applications and backend services supporting the retail technology organization based in Atlanta, Georgia. The ideal candidate will have strong hands-on experience with C#, ASP.NET Core, RESTful APIs, SQL Server, Entity Framework, and Angular, along with experience supporting modern application architectures, cloud-based deployments, CI/CD, automated testing, and Agile development practices.

This role will work closely with product owners, business analysts, UX teams, QA engineers, and other developers to translate business requirements into scalable, secure, and maintainable software solutions that support Macy's omnichannel retail platforms.

Key Responsibilities

- Design, develop, and maintain enterprise web applications using C#, ASP.NET Core, Web API, Angular, TypeScript, HTML5, CSS3, and JavaScript.
- Develop scalable RESTful APIs and backend services to support web applications and integration with distributed systems.
- Build responsive and reusable front-end components using Angular, RxJS, NGRX, Angular Material, Bootstrap, and modern CSS frameworks.
- Implement business logic and data-access functionality using Entity Framework and established .NET development patterns.
- Design, develop, and optimize SQL Server databases, stored procedures, queries, and data-access processes.
- Integrate applications with internal and external services using REST APIs, GraphQL, and event-driven technologies such as Kafka.
- Develop and maintain applications that meet enterprise accessibility requirements, including WCAG and Section 504/ADA-related standards where applicable.
- Participate in application modernization initiatives, including migration and enhancement of legacy enterprise applications.
- Develop reusable components, services, directives, and common application functionality to improve maintainability and consistency.
- Implement authentication, authorization, role-based access, and secure application workflows.
- Develop and maintain automated unit, integration, and UI tests using appropriate testing frameworks and tools.

- Troubleshoot application, API, database, and integration issues and participate in root-cause analysis and resolution.
- Monitor application and backend service performance using tools such as Postman, Swagger, logging platforms, and application monitoring solutions.
- Support CI/CD processes and automated deployments using Jenkins, GitHub Actions, and Azure DevOps.
- Work with Microsoft Azure services, including Azure SQL Database and Azure-based deployment pipelines.
- Participate in code reviews, technical discussions, sprint planning, daily stand-ups, retrospectives, and other Agile/Scrum ceremonies.
- Collaborate with QA, product, UX, and business teams to clarify requirements and deliver production-ready solutions.
- Provide technical guidance and mentorship to junior developers when needed.

Required Qualifications

- Bachelor's degree in Computer Science, Information Technology, Engineering, or a related field, or equivalent practical experience.
- 8+ years of professional software development experience, with significant experience in the Microsoft .NET ecosystem.
- Strong hands-on experience with C# and ASP.NET / ASP.NET Core.
- Experience developing and consuming RESTful APIs.
- Strong experience with Angular and TypeScript for modern web application development.
- Strong SQL Server experience, including stored procedures, database design, complex queries, and performance optimization.
- Experience with Entity Framework and data-access development.
- Strong understanding of HTML5, CSS3, JavaScript, responsive web design, and modern front-end development.
- Experience working in Agile/Scrum software development environments.
- Experience with source control and collaborative development practices using Git or similar tools.
- Experience developing and maintaining automated tests using frameworks such as xUnit, NUnit, Jasmine, Karma, Selenium, or Cypress.
- Strong problem-solving, debugging, communication, and collaboration skills.

Preferred Qualifications

- Experience with Microsoft Azure, Azure SQL Database, Azure DevOps, and Azure deployment pipelines.
- Experience with Kafka or other event-streaming technologies.
- Experience with GraphQL integrations and microservices-based architectures.
- Experience with Blazor and modern .NET UI development.

- Knowledge of WCAG, ADA/Section 504 accessibility requirements, ARIA, and accessibility testing tools.
- Experience with Jenkins and GitHub Actions for CI/CD automation.
- Experience with SSRS or Crystal Reports and enterprise reporting.
- Experience integrating applications with mapping or geospatial services such as ArcGIS.
- Experience modernizing legacy applications and migrating older Angular/.NET implementations to newer frameworks.

Technical Environment

Backend	C#, .NET, ASP.NET Core, ASP.NET Web API, Entity Framework, ADO.NET, WCF
Frontend	Angular, TypeScript, JavaScript, HTML5, CSS3, RxJS, NGRX, Bootstrap, Angular Material, Tailwind CSS, ReactJS
Databases	Microsoft SQL Server, Azure SQL, Oracle, MySQL, DB2
APIs & Integration	REST APIs, GraphQL, Kafka, Apache Storm
Cloud & DevOps	Microsoft Azure, Azure SQL, Azure DevOps, Jenkins, GitHub Actions
Testing	xUnit, NUnit, Jasmine, Karma, Cypress, Selenium, Postman
Reporting & Visualization	SSRS, Crystal Reports, D3.js
Development Tools	Git, SVN, JIRA, Rally, Swagger, NPM, Webpack
Accessibility	WCAG 2.1, ADA/Section 504, ARIA, JAWS, NVDA, aXe

What Success Looks Like

Within this role, the successful candidate will be able to:

- Deliver reliable, maintainable .NET applications and APIs.
- Build modern Angular-based user interfaces that provide a consistent user experience.
- Translate business requirements into scalable technical solutions.
- Develop efficient database and API implementations.
- Contribute effectively to application modernization initiatives.
- Maintain high standards for testing, code quality, security, and accessibility.
- Work effectively within a distributed Agile engineering team.
- Support reliable CI/CD and cloud-based application delivery.

Core Skills

C# | ASP.NET Core | .NET | Web API | Angular | TypeScript | JavaScript | SQL Server | Entity Framework | REST APIs | Azure | Azure SQL | Kafka | GraphQL | Git | Azure DevOps | Jenkins | GitHub Actions | xUnit | NUnit | Cypress | WCAG | ADA/Section 504

Internal Note: Candidate Fit Rationale

This isn't written as a generic .NET posting — it is specifically calibrated around the candidate's demonstrated background: 12+ years of SDLC experience, 5+ years with ASP.NET Core/C#, 10+ years of front-end development, extensive SQL Server/Entity Framework experience, Azure, Kafka, CI/CD, testing, and enterprise accessibility work. The candidate's most recent role also directly supports the emphasis on ASP.NET Core Web API, Angular 14/18, Entity Framework, SQL Server, Kafka, Azure, CI/CD, testing, and Agile delivery.

*Recommended title for submission to Macy's or a staffing partner: **Senior .NET Full Stack Developer** (rather than "Senior .NET Developer"), reflecting the candidate's substantial Angular/front-end responsibility in addition to core .NET backend work.*
