Summary

QA Automation Engineer with expertise in identifying and verifying defects through automated and manual testing. Skilled in Selenium WebDriver, Java, Python, TestNG, API testing, and SQL in Agile environments. Proven track record automating regression suites to improve coverage and reduce execution time. Seeking to apply a proactive, safety-focused approach in a manufacturing QA role.

Technical Skills

- **Automation & Frameworks:** Selenium WebDriver, TestNG, JUnit, Playwright (working knowledge), TypeScript (working knowledge), Automated Test Framework Development, Robot Framework (familiar), Regression & Smoke Testing
- **Languages:** Java, Python, C, SQL, MATLAB
- **API & Data Validation:** REST API Integration/Testing (Postman), API Testing, JSON, Excel/Data Flow Validation, LLM APIs
- **Cloud & CI/CD:** AWS (S3, Lambda), GitHub Actions, CI/CD Pipeline Integration, Git, GitHub
- **Databases:** MySQL, PostgreSQL, SQL Server, SQL Query Validation (Athena-style backend checks)
- **Salesforce & Business Systems:** Salesforce Lightning testing (willingness to learn/expand), business workflow tracing and edge-case identification
- **Process & Tools:** STLC, SDLC, BDD Concepts, Test Planning & Documentation, JIRA, Agile/Scrum, Defect Tracking & Resolution, Automation Metrics (coverage, execution time, defect leakage)

Experience

INNOVACX

Dec 2022 – Jun 2024

Quality Assurance Automation Engineer

Hyderabad, India

- Designed and maintained automated test frameworks using Selenium WebDriver, Java, and TestNG to validate feature- and system-level business logic, tracing workflows end-to-end to catch edge cases early
- Executed REST API integration testing with Postman and wrote SQL queries to validate application data and backend data flows, ensuring functional and compliance requirements were met
- Built and scaled automated regression/smoke test suites, achieving 70% automation coverage and reducing execution time, while tracking coverage and defect leakage metrics for continuous improvement
- Integrated automated test execution into CI/CD workflows to support seamless, continuous regression testing prior to release
- Collaborated cross-functionally with developers, QA engineers, and business analysts in an Agile/Scrum environment; contributed to sprint planning, test strategy, and documentation in JIRA
- Logged, tracked, and resolved defects in JIRA, documenting recurring issues and edge cases to build a shared QA knowledge base supporting reliable, data-driven production releases
- Analyzed QA processes to identify automation opportunities and designed workflow automation solutions, reducing manual testing effort and improving accuracy

Relevant Projects

Parkinson's Disease Detection Using Ensemble Machine Learning

- Built Neuro Detect Pro to analyze voice measurement data and detect Parkinson's disease early, implementing result validation to identify and report anomalies and ensure system accuracy under varied inputs

Implementation of optimized Wallace tree multiplier based on binary counters

- Replaced adders with multiplexers in a 6:3-bit stacking counter to reduce delay, verified design integrity through simulation, identified timing defects, and troubleshooted on the fly to ensure reliable performance

Design of high-speed, area-efficient VLSI architecture of 32-bit three-operand binary adder

- To reduce the delay by using the Ladner-Fischer adder in place of the Han-Carlson adder

Education

Governors State University

Aug 2024 – May 2026

Master's, Computer Science

Chicago, Illinois, USA

Nalla Malla Reddy Engineering College

Aug 2019 – May 2023

B.Tech, Electronics & Communication Engineering

Hyderabad, Telangana, India
