PROFESSIONAL SUMMARY

QA Architect with 15+ years of experience, specializing in AI-driven test automation, leading enterprise QA strategy across web, mobile, API, and Salesforce platforms. Expertise in modernizing legacy automation frameworks into scalable, low-maintenance, AI-powered solutions.

Leverage tools like GitHub Copilot, Claude, and OpenAI/Azure OpenAI to enable intelligent test generation, self-healing automation, and accelerated release cycles. Architecting end-to-end Agentic AI QA platforms, provisioned on Terraform-managed Azure infrastructure, that autonomously ingest user stories, generate test cases and Gherkin feature files, sync with Jira/Xray and Git, execute from a self-service UI portal, and deliver real-time results to Slack for predictive quality insights.

Strong hands-on experience with Playwright, Cypress, Selenium, AccelQ, Provar, Java, Type Script, Cucumber, JMeter, Postman, and Salesforce automation (UI & API), along with accessibility testing (Axe, NVDA) and monitoring using Splunk and CloudWatch. Deep expertise in CI/CD using GitHub Actions and DevSecOps practices with SonarQube and WebInspect.

Highlights include:

- Architected enterprise-scale automation frameworks integrated with CI/CD, reducing manual testing effort by 50%+ and accelerating release cycles.
- Delivered measurable ROI through AI-driven automation, improving test stability and reducing maintenance overhead.
- Led AI transformation in QA by implementing self-healing automation, intelligent test generation, and predictive defect analysis.
- Designed Agentic AI frameworks enabling autonomous test creation and execution.
- Built a full-lifecycle Agentic AI QA automation platform on Azure (infrastructure provisioned via Terraform) that ingests user stories, auto-generates test cases and Gherkin feature files, syncs with Jira (Xray) and Git, executes from a self-service UI portal, and posts real-time results to Slack.
- Spearheaded enterprise tool strategy (Playwright, Cypress, AccelQ, Provar), aligning with architecture and business goals.
- Modernized legacy automation frameworks into scalable, reusable, automation solutions.
- Built real-time QA observability and reporting dashboards using Splunk, CloudWatch, and Jira (RTM/Xray).
- Implemented accessibility automation using Axe and NVDA to ensure WCAG compliance.
- Executed performance and load testing using JMeter, identifying bottlenecks and improving system scalability.
- Developed API automation frameworks using Postman with CI/CD integration.
- Enabled cross-browser and cross-device testing using BrowserStack, Kobiton, and TestGrid.
- Integrated DevSecOps practices using SonarQube and WebInspect within CI/CD pipelines.
- Led global QA teams, mentoring engineers and aligning stakeholders on quality strategy and delivery.
- Delivered end-to-end testing across Agile and Waterfall models, including UAT, regression, integration, and data migration with strong SQL validation.

STRENGTHS

- Strong ability to **rapidly adapt to emerging technologies**, including AI-driven testing tools and modern automation frameworks.
- Excellent **communication and stakeholder management skills**, with experience presenting to senior leadership and driving alignment across business and technology teams.

- Proven ability to **build strong relationships and influence decision-making** across cross-functional and global teams.
- Experienced in **leading, mentoring, and scaling high-performing QA teams**, including onsite-offshore coordination.
- Demonstrates **ownership, integrity, and accountability**, with a collaborative mindset focused on delivering high-quality outcomes.

SKILLS

Category	Skills
Methodologies	Agile (Scrum, SAgile), Waterfall
Automation & Testing	Playwright, Cypress, Selenium, Cucumber, AccelQ, Provar, Appium, Postman
AI & GenAI	GitHub Copilot, OpenAI, Azure OpenAI, Claude, Cursor, Windsurf
Languages	Java, Python, JavaScript/TypeScript, Gen AI/LLM-assisted code generation
CI/CD & DevOps	GitHub Actions, Jenkins, Azure DevOps, Bitbucket, Terraform (IaC)
Cloud & Observability	AWS (CloudWatch), Azure (Azure OpenAI, Terraform-provisioned infra), Splunk, Grafana
Accessibility & Performance	Axe, NVDA, JAWS, JMeter
Cross-Browser Testing	BrowserStack, Kobiton, TestGrid
Databases	MS SQL, MySQL, Oracle, PostgreSQL
Test Management	Jira (RTM, Xray), HP ALM, Rally, Slack (ChatOps/reporting)
Version Control	GIT, SVN

EDUCATION

- Master of Computer Applications (Kurukshetra University, India)
- Bachelor's in science (Kurukshetra University, India)

CERTIFICATIONS

- Certified SAgile 5 Product Owner/Product Manager from Scaled Agile
- Certified SAgile 5 DevOps Practitioner from Scaled Agile
- Certified AWS Solutions Architect – Associate
- Certified Mobile tester (CMT) conducted by American Software Testing Qualifications Board (ASTQB)
- Certified scrum master (CSM) from Scrum Alliance

TRAINING

- GitHub Copilot for Developers, Claude for Enterprise/Prompt Engineering, Azure OpenAI Service Fundamentals, Generative AI with LLMs
- AWS Tech Essentials, Architecting and DevOps Engineering on AWS from Exit Certified corporation.
- SAgile Product Owner/Product Manager course from Scaled Agile
- SAgile DevOps Course 5.0 from Scaled Agile
- Deloitte Faculty Excellence (DFX) Training
- Agile Scrum Training
- Problem-solving training from Performance Excellence

PROFESSIONAL EXPERIENCE

Deloitte Consulting, Lake Mary, FL
QA Automation Architect/Lead

May 2017- Till Date

Responsibilities:

- Delivered QA solutions for enterprise clients across Healthcare, Pharma, Insurance, Financial Services, and State Government sectors including Anthem, Terumo BCT, Gilead Sciences, American Express, Nationwide, Progressive, and State agencies in Florida, Texas, and California.
- Led QA strategy and implementation for enterprise web, API, mobile, and Salesforce platforms, driving scalable and high-quality automation solutions.
- Conduct proof of concept (POC) on various automation tools and present outcomes to determine the best fit for the project.
- Architected and developed BDD-based automation frameworks using Playwright, Cypress, Selenium, Appium, and Cucumber across multiple domains (Finance, Insurance, Healthcare).
- Built AI-driven self-healing automation frameworks, reducing maintenance effort and improving test stability through dynamic locator strategies.
- Designed and built a multi-agent, Agentic AI-powered QA automation platform (Azure OpenAI backend, infrastructure provisioned via Terraform) that automates the full QA lifecycle: ingesting user stories, generating test cases and Gherkin feature files, uploading to Jira (Xray) and Git, executing Playwright test suites from a UI portal, and syncing results back to Jira and Slack in real time.
- Designed and executed Salesforce (UI & API) automation, validating workflows, integrations, and data accuracy across modules.
- Implemented AI-powered visual testing to ensure pixel-perfect UI validation and improved user experience.
- Integrated automation into CI/CD pipelines using GitHub Actions, Jenkins, and Azure DevOps for continuous testing and reporting.
- Enabled cross-browser and cross-device testing using BrowserStack, Kobiton, and TestGrid.
- Led performance, load, and stress testing using JMeter, identifying bottlenecks and improving system scalability.
- Developed API automation frameworks using Postman and integrated them into CI/CD workflows.
- Conducted accessibility testing (WCAG compliance) using Axe and NVDA.
- Led end-to-end testing for ERP systems (Oracle/SAP), ensuring data integrity, workflow accuracy, and system compliance.
- Directed data migration testing strategies, ensuring accuracy, completeness, and successful system transitions.
- Built Power BI dashboards and reports, enabling data-driven QA insights and decision-making.
- Drove process improvements and QA governance, including Jira-based defect tracking, test management, and reporting.
- Led defect triage, UAT support, and stakeholder communication, ensuring alignment and timely delivery.
- Collaborated with cross-functional teams in Agile environments, contributing to sprint planning, execution, and retrospectives.
- Provided leadership and mentoring to QA teams, aligning quality strategy with business objectives.

Assurant Solutions, Miami, FL

April 2010 – April-2017

Sr. QA Automation Engineer

Responsibilities:

- Reviewed functional/design specifications and other relevant documents to extract test requirements.
- Work closely with Business Owners to outline testing Requirements using rational requisite pro.
- Developed Test Plan, Test Cases and Test Scripts and Used HP Quality Center to manage and update Test Cases in Test Built and execution in Test Lab module.
- Performed Smoke Testing, System End to End testing and Regression Testing on system used for Claim processing.
- Used HP Recorder for recording End to End Testing Process.
- Designed and executed test cases for Extract, Transform, Load (ETL) processes, leveraging SQL and automation tools to verify data consistency and correctness.
- Executed Manual Test cases by using positive and negative data inputs.
- Coordinated with developers, database administrators, and business analysts to resolve migration defects and ensure seamless data transition.
- Performed backend testing using SQL queries to check backend data and data integrity.
- Identified high quality bugs and reported using Quality Center.

- Created Test Plan and Test Cases, Test Case Review, Manual execution of the Test Cases, Test Execution and Test Report.
- Participated in test plan and test cases review meetings, Generated report using HP Quality Center and Sphere.
- Responsible for creating PE Strategies, identifying & creating scenarios, creating & executing scripts, analyzing the results and creating reports.
- Conducted performance testing, load testing, and stress testing of web and mobile applications using JMeter.
- Analyzed test results and provided recommendations to improve the performance of applications.
- Designed and developed test plans and test scripts to simulate various types of load on the system.
- Collaborated with developers, architects, and other stakeholders to identify and resolve performance issues.
- Analyzing the performance of the system and identifying and improving the key bottle necks like memory leaks etc. Use HTTP Watch tool for bandwidth testing and create reports
- Participate in various meetings - Requirement review, QA plan & Test Scenarios Review with client, Daily Scrum, Sprint planning, Go/No Go.
- Developing the automation framework for soap and Rest Web Services using Ready API/SoapUI tool.
- Analyzing the defect given by the QA team. Controlling the defect life cycle.
- Giving application demos to the clients and preparing documents for Training on new implementations.
- Performing Acceptance testing and providing support for business UAT.
- Participate in release and QA meetings. Participate in reviewing and demoting the requirements.
- Interact with various clients in America, Latin America and Europe to discuss the requirements.
