SUMMARY

SDET with 6+ years of experience building and owning scalable test automation frameworks across UI and API layers, now expanding into full-stack software engineering. Strong foundation in Java, TypeScript, and modern automation (Playwright, Selenium, Cucumber), paired with hands-on experience designing and building production applications end-to-end — including a full-stack SaaS platform (Next.js, TypeScript, Prisma, AWS) and a native Android application (Java, Room/SQLite). B.S. in Software Engineering from Western Governors University (2026), including a full capstone project spanning application design, database architecture, automated testing, and cloud deployment.

TECHNICAL SKILLS

- **Programming Languages:** Java, TypeScript, JavaScript, Python, SQL
- **Full-Stack & Web Development:** Next.js, React, Node.js, Prisma ORM, RESTful API design
- **Mobile Development:** Java, Android SDK, Room (SQLite), Android Studio
- **UI Automation:** Playwright (TS), Selenium WebDriver, Appium, Selenium Grid
- **BDD & Frameworks:** Cucumber, TestNG, JUnit, Maven
- **API Automation:** Rest Assured, Postman
- **Cloud & DevOps:** AWS (S3, Cloud Practitioner), GitLab CI/CD, Git, Jenkins, GitHub Actions, deployment automation (bash scripting)
- **Databases:** SQL, MySQL, PostgreSQL, SQLite
- **Test Management:** TestRail, JIRA, Rally
- **Practices:** Page Object Model, BDD, data-driven testing, regression/smoke strategy, test reporting

WORK EXPERIENCE

QA Automation Engineer — JP Morgan Chase

04/2022 – Present

- Owned and evolved UI automation frameworks using Playwright (TypeScript) and Selenium (Java), applying Page Object Model (POM), reusable utilities, and modern framework design principles.
- Built Playwright automation to support fast, reliable cross-browser validation, leveraging auto-waiting, traces, screenshots, and logs to significantly reduce test flakiness.
- Designed and implemented BDD automation with Cucumber, enabling clear collaboration between QA, BAs, and developers through executable specifications.
- Developed API automation using Rest Assured to validate request/response payloads, schemas, status codes, and negative scenarios.
- Integrated UI and API automation into CI/CD pipelines (Jenkins, GitHub Actions), supporting pull-request validation, nightly regression runs, and release testing.
- Improved failure analysis and triage efficiency by enhancing reporting, logging, and traceability across automation suites.
- Authored automation documentation and onboarding guides to standardize best practices and accelerate ramp-up for new team members.
- Managed test case execution, automation development, release support, and defect triage in parallel to meet aggressive delivery timelines.

Software Development Engineer in Test — United HealthCare

09/2019 – 03/2022

- Executed functional, regression, and BDD-based test automation using JUnit, Selenium WebDriver, and Maven.
- Built and enhanced Cucumber step definitions, feature files, and scenarios aligned with JIRA acceptance criteria.
- Developed BDD frameworks using Page Object Model and reusable utilities to improve maintainability.
- Collaborated with developers and QA teams in Agile ceremonies to ensure high-quality releases.
- Created and maintained test data, test environments, and regression suites to ensure stable deployments.

QA Automation Engineer — Target

03/2018 – 09/2019

- Developed and maintained UI automation frameworks using Selenium WebDriver and Java, following Page Object Model and reusable utility patterns.
- Implemented BDD automation with Cucumber, creating feature files, step definitions, and test scenarios aligned with JIRA acceptance criteria.
- Collaborated closely with developers, BAs, and QA teams in Agile ceremonies to ensure test coverage and quality standards.
- Maintained test data, environments, and regression suites to support continuous delivery.

PROJECTS

HomeServices-US — Full-Stack SaaS Platform (Founder & Developer)

In Progress

Next.js, TypeScript, Prisma, PostgreSQL, AI-powered estimation, AWS

- Architecting and building a full-stack SaaS platform for home service businesses, including AI-generated service estimates, client email workflows, and secure token-based estimate sharing.
- Designed RESTful API routes with the Next.js App Router and Prisma ORM for data modeling and PostgreSQL persistence.
- Implemented the estimate lifecycle end-to-end, including shareable expiring links (cryptographic tokens) and automated client email delivery.
- Drove iterative development in a real, production-oriented codebase, including type-safety fixes and Next.js route-handler upgrades.

Vacation Scheduler — Android Capstone Application

WGU Software Engineering Capstone

Java, Android SDK, Room (SQLite), JUnit, GitLab CI/CD, AWS S3

- Designed and built a native Android application for planning vacations and excursions, applying inheritance and polymorphism (an abstract ScheduledItem base class) across a Room-backed data layer.
- Implemented secure local authentication using PBKDF2-hashed PIN storage, real-time search, and a combined polymorphic reporting view.
- Wrote and executed instrumented JUnit test suites validating core security logic, and automated deployment to AWS S3 with a custom bash deployment script.
- Managed the full source control workflow in GitLab, including feature branching, merge requests, and documented commit history.

Interactive World Map Application

Angular, TypeScript, HTML/CSS

- Developed a fully interactive web application allowing users to explore global country data, with dynamic API calls for population, geography, currencies, languages, and flag imagery.
- Designed responsive UI components using Angular routing, services, and reusable modules, with real-time search and filtering.

Java Wordle Console Game

Java, Maven, JUnit, Git/GitHub

- Designed and implemented a Wordle-style console game in Java, with JUnit 5 unit tests validating scoring logic.

EDUCATION

B.S. Software Engineering — Western Governors University — 2026

CERTIFICATIONS

- AWS Certified Cloud Practitioner (2024)
- CompTIA Project+ (2024)
- CompTIA Foundation+ (2023)
- AXELOS ITIL Foundation Certification
- WGU Certificate — Front-End Developer
- WGU Certificate — Back-End Developer
