SUMMARY

Data Analyst with 5+ years building **SQL** and **Python analytics pipelines** across healthcare insurance and marketing technology. Delivered 15+ **Tableau** and **Power BI** dashboards for 2.4M+ covered members, built **machine learning** models on 2M+ record datasets, and applied **A/B testing** and **statistical modeling** to inform care program strategy at a regional BCBS plan. Hands-on with **Snowflake**, **Google BigQuery**, **dbt**, **Apache Airflow**, **scikit-learn**, and **LLM** integration; brings **cohort analysis**, **predictive analytics**, and **data-driven decision making** to cross-functional stakeholders.

EXPERIENCE

Blue Cross Blue Shield (BCBS)

Oct 2025 – Present

Data Analyst

Irving, TX

- Designed a **Snowflake data warehouse** consolidating claims and eligibility records from 5 source systems under **HIPAA**-compliant controls, surfacing 3,200+ billing exceptions for clinical operations review across 2 plan years.
- Integrated an **OpenAI API LLM** classification pipeline processing 4,200 monthly member feedback records into 12 care themes, cutting manual review time from 14 hours to 2 hours weekly.
- Developed a **gradient boosting** readmission risk model (**XGBoost**, **scikit-learn**) on 3 years of claims data, flagging 310 high-risk members monthly and contributing to a 28-case reduction in 30-day readmissions over 2 quarters.
- Automated 7 **ELT** workflows in **Apache Airflow** and **dbt**, loading claims data into **Snowflake** on daily cycles and eliminating 11 hours of manual **data pipeline** prep per reporting cycle.
- Deployed 14 **Tableau** dashboards tracking 18 **KPIs** across utilization management and care coordination programs, adopted by 40 users across operations and finance within 6 weeks.
- Delivered **A/B testing** and **statistical hypothesis testing** in **Python** (SciPy, Statsmodels) across 4 outreach variants, surfacing statistically significant engagement differences that informed care program strategy for the subsequent plan year.

Epsilon

Oct 2024 – Sep 2025

Data Analyst

USA

- Analyzed 2M+ transaction records in **Google BigQuery** and **Python (Pandas)** to build **CLV** and **cohort analysis** models across 8 client portfolios, delivering revenue tier reports consumed by campaign planning teams across 3 clients.
- Applied a **Random Forest** classification model (**scikit-learn**) to score 1.2M loyalty members on **churn propensity**, producing ranked risk segments used by campaign teams to re-engage 8,400 lapsed accounts over 2 cycles.
- Built a **Python logistic regression propensity scoring** pipeline generating weekly ranked audience segments of 89,000 contacts, reducing manual audience assembly from 8 hours to 45 minutes per cycle.
- Constructed **dbt** dimensional models in **Google BigQuery** standardizing loyalty event schemas across 3 clients, eliminating 9 hours of manual schema correction per sprint.
- Produced 15 **Power BI** dashboards tracking campaign engagement and **customer segmentation** metrics for 5 clients, replacing static Excel reports and reducing delivery turnaround from 4 days to same-day.
- Standardized a **data quality** validation framework across 4 **data pipelines** using **Great Expectations** and **SQL** checks, intercepting 220 anomalous records weekly before downstream delivery.

Infosys

Sep 2021 – Dec 2022

Systems Engineer – Data & Reporting

India

- Migrated 12 Crystal Reports workflows to **Tableau**, saving 18 weekly hours of report generation and extending **self-service analytics** access to 65 users across 3 delivery units.
- Extracted and transformed data from **SAP S/4HANA** and **Oracle** using **SQL** and **Informatica PowerCenter**, supplying 8 downstream operational reports for project management and billing teams.
- Streamlined monthly **SLA** reporting with parameterized **SQL** stored procedures and scheduled **Python** scripts, compressing the monthly close cycle from 6 days to 2 days.
- Established a 14-dimension **data validation** checklist for inbound client files, reducing **data quality** errors in the reporting warehouse by 85 records per monthly cycle.
- Implemented a **Python**-based reconciliation script comparing source-to-target record counts across 6 nightly **ETL** jobs, reducing undetected load failures from 12 to 2 per quarter.

KPMG

Jul 2020 – Aug 2021

Data Analyst – Audit & Assurance

India

- Synthesized records from 6 audit engagements using **ACL Analytics** and **Excel**, producing risk-stratified ledger summaries reviewed by senior managers across consumer goods and financial services sectors.
- Modeled 4 **audit risk** scenarios in **Python** and **Excel** for a \$340M-revenue manufacturing client, quantifying exposure across inventory valuation, accounts receivable, and contract compliance.
- Identified 180+ anomalous journal entries across 3 audit cycles using **ACL Analytics** and **SQL** sampling, reducing manual review workload by 12 hours per engagement.
- Transformed manual confirmation workflows into **Excel VBA** and **Python** scripts for 5 recurring procedures, cutting quarterly preparation time from 3 days to 6 hours.
- Reconciled vendor master and accounts payable data across 3 client **SAP** instances using **ACL Analytics**, surfacing 94 ledger discrepancies and reducing audit confirmation exceptions by 8 hours per engagement.

TECHNICAL SKILLS

Languages & Libraries: Python, Pandas, NumPy, scikit-learn, SciPy, Statsmodels, Matplotlib, Seaborn, SQL, R

Data Platforms & Warehouses: Snowflake, Google BigQuery, Amazon Redshift, Databricks (Delta Lake), Microsoft SQL Server, Azure Synapse Analytics

ETL, ELT & Orchestration: Apache Airflow, dbt (data build tool), dbt Cloud, Informatica PowerCenter, AWS Glue, PySpark (Apache Spark), Azure Data Factory

Visualization & Reporting: Tableau, Microsoft Power BI, Looker, Excel (Advanced), Google Data Studio

Machine Learning & AI: XGBoost, Gradient Boosting, Logistic Regression, Random Forest, K-Means Clustering, Natural Language Processing (NLP), OpenAI API, Large Language Model (LLM) Integration, Predictive Modeling, Feature Engineering, MLflow, Vertex AI

Analytics Methods: A/B Testing, Statistical Hypothesis Testing, Time Series Analysis (Prophet, ARIMA), Cohort Analysis, Funnel Analysis, Customer Segmentation, Propensity Modeling, Customer Lifetime Value (CLV), Churn Analysis, Exploratory Data Analysis (EDA), Attribution Modeling, Regression Analysis

Databases: PostgreSQL, MySQL, Oracle Database, SAP S/4HANA, MongoDB

Cloud Platforms: Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP), Azure Machine Learning

Data Governance & Compliance: Great Expectations, Data Validation Frameworks, ACL Analytics, Data Lineage Tracking, HIPAA Compliance, PHI Data Handling, DataOps, CI/CD for Data Pipelines, Data Catalog

Project & Collaboration: Git, GitHub, Jira, Confluence, Agile (Scrum), Cross-functional Stakeholder Reporting, Executive Presentation

PROJECTS

Healthcare Member Retention & Enrollment Analytics | *Snowflake SQL, Python, scikit-learn, Pandas*

- Queried 880,000+ member enrollment records in **Snowflake SQL** and **Python** (Pandas), surfacing 6 **retention** drivers linked to enrollment decline across 4 product lines over 2 reporting cycles.
- Engineered a **logistic regression retention scoring model** (**scikit-learn**) producing outreach lists covering 21,500 at-risk members quarterly, reducing campaign prep time by 6 hours per cycle.

Customer Lifetime Value & Behavioral Segmentation Analysis | *Google BigQuery, Python, scikit-learn*

- Processed 7M+ transaction records in **Google BigQuery** to build **CLV** models classifying customers into 5 revenue tiers across 4 subscription cohorts.
- Segmented behavioral groups using **K-Means clustering** (**Python**, **scikit-learn**), enabling pricing recommendations that retained 17,000+ high-value accounts annually.

Sales Forecasting & Revenue Performance Analytics | *Python, Prophet, ARIMA, Snowflake, SQL, Tableau*

- Forecasted monthly revenue across 6 product lines using **Python** (**time series modeling**, Prophet, ARIMA) on 24 months of transaction data, reducing planning adjustment cycles from 8 to 2 per quarter and saving 14 analyst hours monthly.
- Aggregated sales records from 4 regional **SQL** databases into a unified **Snowflake data model**, powering a **Tableau** executive dashboard tracking 12 revenue **KPIs** for VP-level stakeholders across 3 business units.
