SUMMARY

IT Systems Administrator with experience supporting large-scale Windows Server environments, including user access management, patch management, backup and disaster recovery, and incident response. Skilled in PowerShell and batch scripting for automation, with hands-on experience in VMware virtualization and Active Directory user/permission management.

PROFESSIONAL EXPERIENCE

Systems Administrator (Windows Administrator), IBM

October 2019 – August 2022 | India

- Administered and maintained 200–500 Windows Server endpoints, managing user accounts, permissions, and access control across the environment.
- Performed regular patch management and backup/disaster recovery procedures to help maintain system uptime and data integrity across production servers.
- Managed incident response and support tickets through ServiceNow, resolving infrastructure and access-related issues for end users.
- Automated routine administrative tasks using PowerShell and batch scripting, reducing manual effort on recurring maintenance and provisioning work.
- Supported virtualized server environments using VMware, assisting with provisioning and resource management.
- Managed user accounts and permissions within Active Directory, ensuring appropriate access controls across the organization.

EDUCATION
