LOCATION San Francisco, CA	WORK ARRANGEMENT Remote schedule determined by project team	EMPLOYMENT TYPE W2 Contract
TARGET RATE \$62 – \$65/hour W2, depending on experience and applicable staffing benefits	HOURS 40 hours/week	CLIENT CloudTrucks

01 PROJECT / BUSINESS CONTEXT

CloudTrucks operates a technology-enabled trucking and freight platform supporting owner-operators, carriers and freight activity across the United States. Its platform includes tools for finding and booking loads, dispatch support, financial management and operational workflows. CloudTrucks states that its network covers the lower 48 states and that its app provides load visibility and booking capabilities.

The Salesforce Administrator / CRM Business Analyst will support the administration and ongoing improvement of CRM processes used by business and operations teams. The role sits between business stakeholders and the Salesforce platform, with responsibility for configuration, data quality, user access, workflow automation, reporting and requirements analysis.

This is an administration and business-process role, not a custom Apex development position.

02 CORE RESPONSIBILITIES

- ▶ Administer Salesforce environments supporting customer, sales and operational workflows.
- ▶ Configure objects, fields, record types, page layouts, Lightning Record Pages, validation rules and permissions based on approved business requirements.
- ▶ Gather requirements from Operations, Sales, Customer Support and business stakeholders.
- ▶ Translate requirements into user stories, acceptance criteria, process flows and functional specifications.
- ▶ Configure and maintain Salesforce Flows, including record-triggered and screen flows.
- ▶ Support lead, account, contact, opportunity and case-related business processes.
- ▶ Manage users, profiles, roles, permission sets, sharing rules, organization-wide defaults and field-level security.
- ▶ Perform regular Salesforce data-quality reviews, duplicate identification and data-cleanup activities.
- ▶ Execute data imports, exports, updates and migrations using Salesforce Data Loader.
- ▶ Analyze Salesforce data using SOQL, Excel and native Salesforce reporting.
- ▶ Develop and maintain operational reports and dashboards for business users and management.
- ▶ Investigate data inconsistencies and system/process issues and coordinate resolution with technical teams.
- ▶ Coordinate sandbox activities and support environment readiness for testing.
- ▶ Support deployments using Salesforce Change Sets and established release-management procedures.
- ▶ Participate in UAT by preparing test scenarios, validating expected results and documenting defects.
- ▶ Maintain process documentation, SOPs and user-facing Salesforce documentation.
- ▶ Provide end-user support and conduct training for new or modified Salesforce functionality.
- ▶ Support ongoing data governance and access reviews.
- ▶ Work within Agile delivery processes including backlog refinement, sprint planning and issue tracking.

03 REQUIRED QUALIFICATIONS

NON-NEGOTIABLE

- ▶ 3+ years of Salesforce Administration experience.
- ▶ Strong hands-on experience with Salesforce Sales Cloud.
- ▶ Experience with Salesforce configuration rather than relying primarily on custom development.
- Strong experience with:
 - Salesforce Flow
 - Validation Rules
 - Custom Objects/Fields
 - Record Types
 - Page Layouts

PREFERRED

- ▶ Service Cloud experience.
- ▶ Experience with case management and operational support workflows.
- ▶ Experience supporting transportation, logistics, marketplace or SaaS operations.
- ▶ Exposure to Salesforce integrations/API concepts.
- ▶ Copado or comparable Salesforce release-management experience.
- ▶ Experience with Snowflake or another enterprise data platform.

- Lightning Record Pages
- Profiles
- Roles
- Permission Sets
- Sharing Rules
- Field-Level Security
- Hands-on Salesforce Data Loader experience.
- Experience with Salesforce data cleansing, deduplication and data-quality controls.
- Ability to write/use SOQL for data validation and analysis.
- Strong requirements-gathering and documentation experience.
- Experience creating user stories and acceptance criteria.
- UAT coordination and business-process validation experience.
- Experience developing Salesforce reports and dashboards.
- Experience working with Agile/Scrum teams and Jira.

04 PROJECT / BUSINESS CONTEXT

The technical discussion should focus on practical administration rather than Salesforce development:

- Salesforce configuration scenario — configure a business process without Apex.
- Flow scenario — determine when to use a record-triggered versus screen flow.
- Security scenario — explain OWD, role hierarchy, profiles, permission sets and sharing.
- Data scenario — identify and correct duplicate/inconsistent Salesforce records.
- Business-analysis scenario — convert an ambiguous stakeholder request into requirements and acceptance criteria.
- UAT scenario — design test cases for a Salesforce process change.
- Reporting scenario — create a dashboard/report structure for operational KPIs.
- Production-support scenario — troubleshoot a user-reported Salesforce issue.
