The Tech System — W2	October 2nd Week, 2026	October 2028	\$58-\$70/hr W2

REQ ID BN-2026-IT-POC-4826

ROLE PURPOSE

This is a business-facing applied data science role focused on customer, product, sales, inventory and digital-behavior data. The Data Scientist will identify patterns, develop predictive models and translate analytical results into measurable recommendations for merchandising, digital commerce, store operations and customer experience.

PRIMARY DELIVERABLES

CUSTOMER & DIGITAL BEHAVIOR - Analyze customer and digital interaction data to identify behavioral patterns and opportunities. - Build predictive models for customer response, engagement or other measurable business outcomes. - Evaluate models against business KPIs, not statistical accuracy alone.	RETAIL & MERCHANDISING ANALYTICS - Analyze sales, product, category and channel performance. - Identify drivers of demand, sales performance and customer engagement. - Support promotion, product-mix and other commercial decisions. - Build repeatable analytical datasets and reporting logic.
INVENTORY & OPERATIONS - Analyze inventory movement, aging, turnover and demand patterns. - Identify anomalies and operational trends requiring investigation. - Support forecasting and scenario analysis where appropriate. - Translate findings into measurable operational actions.	MODEL DEVELOPMENT - Perform EDA and feature engineering using Python and SQL. - Build classification, regression or other appropriate predictive models. - Compare alternatives; document assumptions and limitations. - Validate with appropriate train/validation/holdout methods. - Use explainability techniques when business users need model transparency.
BUSINESS COMMUNICATION - Present findings to merchandising, digital, operations and technology stakeholders. - Convert statistical/model outputs into clear recommendations. - Build concise visualizations and analytical narratives. - Partner with technical teams so analytical work is reproducible and maintainable.	

QUALIFICATIONS

NON-NEGOTIABLE / PREFERRED

NON-NEGOTIABLE	PREFERRED
- Bachelor's or Master's in Data Science, Business Analytics, Computer Science, Statistics, Mathematics, Engineering or related quantitative field. - Strong Python for data analysis and machine learning. - Strong SQL.	- XGBoost / gradient boosting; TensorFlow/Keras or comparable framework. - SHAP/model explainability. - Retail, e-commerce, marketplace or consumer analytics. - Demand forecasting, customer segmentation or recommendation

BARNES & NOBLE

BOOKSELLERS

- | | |
|--|---|
| <ul style="list-style-type: none">• Hands-on Pandas, NumPy and Scikit-learn or equivalent.• Understanding of regression/classification and model evaluation.• Feature engineering and data preparation experience.• Experience with large, multi-source datasets.• Ability to communicate analytical findings to non-technical stakeholders.• Strong attention to data quality and analytical accuracy. | <ul style="list-style-type: none">• systems.• A/B testing and hypothesis testing.• Tableau, Power BI or comparable visualization.• Cloud data warehouses; Git/GitHub and collaborative analytical development. |
|--|---|

WORK AUTHORIZATION

W2 only. Candidate must possess valid U.S. employment authorization for the assignment period.

Potential categories for submission, subject to the active client/vendor program:

USC • GC • H-4 EAD • OPT • STEM OPT Extension • H-1B Transfer • CPT where legally authorized
