

ABDUL MUNAF

PYTHON FULL STACK DEVELOPER | AI/ML | AWS | CLOUD

abdulmunafwork@gmail.com | +1 516-601-3850 | U.S. Green Card Holder | [linkedin.com/in/abdul-munaf-01am/](https://www.linkedin.com/in/abdul-munaf-01am/)

PROFESSIONAL SUMMARY

Python Full Stack Developer with 4+ years of professional experience building scalable, secure, and cloud-native web applications from August 2022 to present. Strong hands-on background in Python, Django, Flask, FastAPI, REST APIs, React, JavaScript/TypeScript, SQL, AWS, Docker, Kubernetes, CI/CD, microservices, and AI/Generative AI technologies. Experienced across the full software development lifecycle including requirements analysis, architecture, backend and frontend development, API integration, automated testing, cloud deployment, monitoring, performance optimization, and production support. Comfortable working with cross-functional teams and translating business requirements into reliable, maintainable solutions.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Python / Backend: Django, Flask, FastAPI, REST APIs, GraphQL, Celery, SQLAlchemy, Pydantic, AsyncIO

Frontend: React, Redux, React Hooks, Next.js, JavaScript/TypeScript, HTML5, CSS3, Responsive UI

AI / ML / GenAI: Generative AI, LLM integrations, OpenAI APIs, prompt engineering, RAG, embeddings, vector search, LangChain, AI-powered automation, model/API integration

AWS / Cloud: AWS Lambda, ECS, EKS, EC2, S3, RDS, DynamoDB, API Gateway, CloudWatch, IAM, VPC, SQS, SNS, EventBridge, Secrets Manager

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

DevOps: Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI/CD, CI/CD automation

Testing: PyTest, unittest, Selenium, Playwright, Postman, API testing, integration testing, automated regression testing

Architecture: Microservices, event-driven architecture, serverless, distributed systems, API-first development, OAuth 2.0, JWT

Tools: Git, GitHub, GitLab, Jira, Confluence, Linux, Agile/Scrum

PROFESSIONAL EXPERIENCE

DIVORCE.COM | Python Full Stack Developer / AI Engineer

Aug 2024 – Present

- Design and develop scalable full-stack applications using Python, FastAPI/Django/Flask, React, TypeScript, REST APIs, PostgreSQL, and AWS cloud services.
- Build modular backend services and microservices with clean architecture, reusable components, robust exception handling, validation, logging, and secure API patterns.
- Develop and integrate RESTful APIs supporting web applications, third-party services, authentication, document workflows, notifications, and business-process automation.
- Implement responsive React-based user interfaces using reusable components, state management, API integration, form validation, and asynchronous data flows.
- Integrate AI and Generative AI capabilities into application workflows, including LLM-powered assistance, prompt-based automation, structured responses, embeddings, retrieval workflows, and intelligent content processing.
- Design RAG-style workflows using document ingestion, chunking, embeddings, vector search, retrieval, and LLM response generation to improve the relevance of AI-generated results.
- Build asynchronous and event-driven workflows using AWS services such as Lambda, SQS, SNS, EventBridge, S3, and API Gateway.
- Deploy and operate containerized applications using Docker and AWS container/cloud infrastructure, with attention to scalability, reliability, security, and cost optimization.
- Use PostgreSQL/MySQL and NoSQL technologies for transactional and application data, designing schemas, indexes, queries, migrations, and data-access layers.
- Implement authentication and authorization using OAuth 2.0/JWT-based patterns, role-based access controls, secure secrets management, and least-privilege AWS IAM practices.

- Create automated unit, integration, API, and end-to-end tests using PyTest, unittest, Postman, Selenium/Playwright, and CI-based test execution.
- Build CI/CD pipelines using GitHub Actions/GitLab CI/Jenkins to automate code quality checks, testing, packaging, container builds, and deployments.
- Use Terraform and infrastructure-as-code practices to provision and maintain repeatable cloud environments.
- Monitor applications and troubleshoot production issues using AWS CloudWatch, application logs, metrics, alerts, and structured diagnostic practices.
- Participate in Agile/Scrum ceremonies, sprint planning, backlog refinement, code reviews, technical discussions, demos, and production support.

GEMINI SOLUTIONS | Python Full Stack Developer

Aug 2022 – Jul 2024

- Developed enterprise web applications and backend services using Python, Django, Flask, FastAPI, REST APIs, React, JavaScript/TypeScript, and SQL.
- Translated functional requirements and business workflows into scalable application components, APIs, database models, and user-facing features.
- Built REST APIs with validation, authentication, error handling, pagination, filtering, serialization, documentation, and integration with frontend applications.
- Developed React components and pages with reusable UI patterns, API integration, client-side validation, state management, and responsive design.
- Implemented database-driven applications using PostgreSQL and MySQL, including schema design, SQL queries, stored procedures where appropriate, indexing, migrations, and performance improvements.
- Developed asynchronous background processing using Celery/Redis and designed event-driven integrations for long-running and high-volume workloads.
- Created reusable Python modules and services following object-oriented programming, SOLID principles, clean-code practices, and maintainable architecture patterns.
- Integrated third-party APIs and cloud services to automate business processes and synchronize application data across systems.
- Worked with AWS services including EC2, S3, Lambda, RDS, API Gateway, IAM, CloudWatch, SQS, and SNS for application hosting, storage, integration, security, and monitoring.
- Containerized applications using Docker and supported deployments across development, test, and production environments.
- Implemented automated testing with PyTest/unittest and API testing with Postman, while supporting UI and regression automation using Selenium/Playwright.
- Participated in code reviews, defect triage, root-cause analysis, release activities, and production issue resolution.
- Used Git-based workflows and CI/CD pipelines to automate builds, tests, quality checks, and application deployments.
- Collaborated with developers, QA engineers, business analysts, and stakeholders in Agile/Scrum teams and contributed to technical documentation.

EDUCATION

Osmania University — Bachelor's in Information Technology

Jul 2018 – Jun 2022
