

Adarsh Vupputuri

Healthcare Data Analyst

MI, USA | +1 (201) 735-1047 | adarshvupputuri7@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Healthcare Data Analyst with nearly 5 years of experience across healthcare and digital payments analytics. Hands-on with SQL, Python, Power BI, Tableau, Snowflake, Databricks, and Azure for claims, EHR/EMR, population health, risk stratification, pharmacy analytics, and KPI reporting. Experienced in data validation, cohort analysis, statistical testing, dashboard development, and working with clinical and business stakeholders in HIPAA-governed environments.

TECHNICAL SKILLS

Programming & Analytics	Python, SQL, R, Pandas, NumPy, SciPy, Scikit-learn, statistical analysis, EDA, regression, ANOVA, A/B testing, time series
BI & Reporting	Power BI (DAX, Power Query), Tableau, Advanced Excel, KPI reporting, data storytelling
Data Platforms	Snowflake, PostgreSQL, SQL Server, Oracle, MySQL, AWS S3, Redshift, Azure Data Factory, ADLS, Databricks, Apache Spark, PySpark
ETL & Data Quality	Alteryx, SSIS, Informatica, data mapping, transformation, reconciliation, validation, data quality monitoring
Healthcare Domain	EHR/EMR, healthcare claims, SDOH, population health, risk stratification, care gaps, value-based care, pharmacy claims, NDC, formulary analytics, HIPAA
Methods & Tools	Git, GitHub, Bitbucket, Jira, Agile/Scrum, Waterfall, data governance, root cause analysis

PROFESSIONAL EXPERIENCE

Data Analyst | Henry Ford Health | MI, USA

Jan 2025 – Present

Project: Population Health Analytics & Risk Stratification Platform

- Built PostgreSQL analyses across patient, claims, EHR/EMR, and SDOH data to identify high-risk cohorts, care gaps, and chronic-disease patterns used in preventive-care reporting.
- Designed Alteryx workflows to standardize and reconcile healthcare datasets before downstream reporting, reducing repeated manual cleanup and improving consistency across population-health outputs.
- Processed multi-million-record healthcare datasets with Python, PySpark, and Apache Spark, supporting clinical and operational reporting that previously required longer batch-processing cycles.
- Delivered Snowflake cohort and value-based-care analyses and Power BI dashboards using DAX and Power Query for risk stratification, care-management KPIs, and recurring stakeholder reviews.
- Built Azure data workflows with ADF, ADLS, and Databricks for governed patient and claims processing, applying HIPAA-aligned access, validation, and data-quality controls.
- Partnered with clinicians and care coordinators to validate KPI definitions, patient risk scores, and dashboard outputs through reconciliation, statistical checks, and pre-release review.

Data Analyst | Accenture | Hyderabad, India

Sep 2020 – Nov 2023

Project: Digital Payments Analytics & Customer Intelligence Platform

- Analyzed 10M+ digital payment transactions with Python and SQL to surface spending patterns, transaction failures, merchant trends, and customer segments for recurring business reviews.
- Built SQL datasets with CTEs, window functions, joins, and stored procedures for operational reporting, replacing repeated manual extraction steps and improving report turnaround.
- Maintained Tableau dashboards for payment success rates, customer activity, merchant performance, and core business KPIs, giving stakeholders a consistent view of transaction health.
- Processed high-volume transaction and customer data in AWS S3 and Redshift and automated recurring MIS reporting with Excel and Power Query for faster reconciliation and exception review.
- Applied association-rule analysis and exploratory analysis to customer purchase behavior, then validated findings against source data before sharing cross-sell and operational recommendations.

SELECTED PROJECT

Pharmacy Claims Analytics & Formulary Spend Forecasting

- Built a Python, SQL, and Alteryx pipeline in Databricks to ingest and normalize 1M+ pharmacy claims in Snowflake, including NDC codes, drug tiers, and formulary rules.
- Developed ARIMA forecasts by therapeutic class, drug tier, and chronic-disease cohort to flag roughly \$500K in high-cost formulary gaps and provide six-week spend projections for renewal planning.
- Created a Tableau dashboard for generic substitution, specialty-drug spend, prior-authorization denials, and formulary adherence, replacing six recurring Excel reports.

EDUCATION

- Master of Science in Information Systems | Central Michigan University | MI, USA**

Graduation date: December 2025

CERTIFICATIONS

- IBM Data Analyst Professional Certificate**
- Certified Lean Six Sigma Green Belt** | Central Michigan University
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate**
