Summary

Product Manager with 3+ years of experience building B2B SaaS and infrastructure products that deliver real impact. I thrive at the intersection of strategy, execution and data, leading teams and aligning stakeholders around what matters most. With strong data analytics and product intuition, I bring clarity and momentum to every product I own.

Education

Northeastern University Master of Science in Engineering Management GPA: 3.79 Relevant coursework: Product Design & Development, Project Management, Customer-Driven Innovation, Visualization for Analytics	Boston, USA May 2025
DY Patil Institute of Engineering and Technology Bachelor of Engineering in Computer Science and Engineering	Pune, India May 2019

Work Experience

Infosys Limited Technology Analyst	Pune, India November 2021 – July 2023
- Led product strategy and execution for automation features across 10+ digital banking platforms. Partnered with client stakeholders to define technical requirements and prioritize high-impact initiatives, resulting in streamlined operations and \$300K+ in annual cost savings. - Built SQL-powered dashboards in Power BI to track KPIs like deployment velocity, incident frequency, and feature adoption. Used monthly by 40+ stakeholders to monitor customer experience and guide roadmap decisions. - Facilitated cross-functional collaboration by leading sprint reviews, backlog refinement, and planning sessions with infrastructure, QA, and compliance teams. Ensured timely delivery of client-facing features with measurable operational impact. - Defined product requirements and analyzed platform usage, logs, and incident trends to extract business insights. Used data to reprioritize features, cut issue recurrence by 20%, and improve adoption of internal tools. - Delivered a change management platform in ServiceNow to automate release approvals and ensure regulatory compliance. Reduced release cycle time by 40% and established a standardized process used across multiple product teams.	
Systems Engineer	November 2019 – October 2021
- Acted as a consultant to enterprise banking clients, advising on infrastructure architecture, deployment strategies, and system resilience. Delivered automation and monitoring solutions tailored to financial compliance and performance requirements. - Partnered with delivery and QA leads to define acceptance criteria and rollout plans for client-facing infrastructure updates. Supported 20+ successful releases with minimal downtime and strong post-launch feedback. - Scoped and delivered backend system enhancements for high-volume transaction infrastructure running on RHEL. Introduced intelligent retry mechanisms that improved transaction success by 25% and significantly reduced escalations. - Created a centralized Confluence hub to streamline onboarding across engineering teams, reducing new hire ramp-up time by 60%.	

Projects

Lawgic – Legal Clarity, Powered by Logic , (Link)	September 2024 – December 2024
Conducted in-depth competitive analysis of 5+ legal-tech platforms to identify market gaps, crafted a scalable business model, and defined a clear value proposition that differentiated the product in the legal-tech landscape.	
Hospital Management System (Link)	January 2024 – April 2024
Engineered a data-driven dashboard using T-SQL and Power BI to track and visualize key hospital metrics, optimizing operational decisions on patient flow and resource allocation, ultimately improving throughput by 20%.	
Subject Spotlight (Link)	January 2024 – May 2024
Drove product discovery through 50+ user interviews to uncover friction in learning resource access; prioritized MVP features using RICE and mapped user journeys that directly shaped feature scope and early UI prototypes.	
Reliability Feature for Google Maps , (Pitch Deck), <i>Northeastern University- Product Hackathon</i>	September 2023 – December 2023
Identified a market gap in navigation safety through user research and behavioral surveys; delivered a Figma prototype and feature concept backed by competitor analysis and user-driven insights, earning finalist recognition in a university hackathon.	

Skills and Technical Expertise

Business & Product Skills: Roadmapping, Requirements Gathering, KPI Definition, User Research, Stakeholder Management, Business Case Development, Usability Testing, Go-To-Market (GTM) Strategy, Competitive Intelligence
Technical: SQL, Python, AWS, ETL Pipelines, Data Visualization (Power BI, Tableau), Jenkins, Git, Bitbucket, JFrog
Tools: ServiceNow, Jira, Confluence, Figma, Miro, Lucidchart, Google Analytics, Salesforce, Trello
Certifications: AI for Product Management, AWS Cloud Practitioner (In Progress), AWS Cloud Essentials

Leadership & Involvement

Step Nation , <i>Project Manager (Volunteer)</i>	September 2024 – December 2024
Managed end-to-end delivery of digital outreach initiatives by defining scope, building timelines, and coordinating work across design, content, and development teams. Used Trello to track tasks, monitor progress, and ensure deadlines were met.
