Professional Summary

10+ years of experience in software testing including both manual and automated testing. I possess a comprehensive understanding of the Software Development Life Cycle (SDLC). My expertise extends to analyzing and interpreting test requirements, as well as monitoring and maintaining automated test scripts and test cases to align with evolving business needs. I have a strong aptitude for identifying design issues through objective analysis and subjective evaluation, and I am highly skilled in manual quality assurance testing processes.

My technical proficiency encompasses a variety of testing frameworks and tools, such as Playwright, Selenium WebDriver, JUnit, NUnit, TestNG, LambdaTest, Pytest, Cypress, Mocha, Chai and Cucumber. I am adept at locating web page elements using both XPath and CSS selectors, and I am experienced in defining page structures and specifying web elements for testing purposes. My programming expertise is grounded in object-oriented principles, and I consistently apply best coding practices when developing automated tests using Java, C#, Python, and JavaScript.

Core Competencies

- Exceptional analytical, communication, and interpersonal skills; recognized as a strong team player.
- Dependable and reliable, consistently aware of responsibilities and duties in all situations.
- Quick to learn, self-motivated, effective communicator, and demonstrates a strong work ethic.
- Proactive in identifying potential issues and resolving problems; capable of working independently, taking initiative, and exercising sound judgment.
- Strong collaborative orientation and interpersonal skills; maintain a positive outlook and foster strong working relationships across all organizational levels.
- Capable of managing multiple projects simultaneously.
- Highly flexible and adaptable to changing environments.

- Experienced in diverse professional settings with a consistent record of achieving positive results.

Tools and Skills

Languages and Technologies	C, C#, Java, Python, HTML, XML, CSS, JavaScript
Automated Testing Tools	Selenium, Playwright, Cypress, LambdaTest, Jenkins
Test Management Tools	ADO, Jira, Snagit, TestRail, BrowserStack
Operating Systems	Windows 11, 10, Windows 98/2000/2007/Vista, Windows Enterprise 2003, Linux
Microsoft Office Suite	MS Word, MS Excel, MS PowerPoint
Database	MS SQL Server, MySQL, MS Access, Java DB
Methodologies	Agile/Scrum, Waterfall
Browsers	Internet Explorer, Microsoft Edge, Firefox, Chrome, Safari

Professional Experience

CMG Mortgage

Automation Test Engineer (October 2023 – November 2025)

- Participated in daily scrum meetings, providing updates on test statuses, work items, and highlighting any blockers or issues.
- Developed and documented test plans and test cases using ADO.
- Created comprehensive test plans, added relevant test cases to each plan, and updated their statuses accordingly.
- Defined web elements for new functionalities and incorporated new web pages into the Test Suite.
- Updated existing tests, including web elements, pages, and methods, following UI or Angular changes that led to test failures.
- Developed automated regression and sanity tests in the UAT environment using Cypress and Playwright, enabling manual QA and BSA users to run feature-specific tests easily and observe results in real time.
- Utilized Selenium with C# and NUnit to write and execute test cases in Visual Studio.
- Developed automated tests for LambdaTest and executed them through remote and Lambda Pipeline environments.
- Ran automated tests overnight for validating data, checking system stability and reliability.
- Conducted regression tests in UAT and production environments before and after new feature releases.
- Utilized conditional statements to identify specific locators across DEV, QA, UAT, and production, reducing test failures.
- Reported environment related issues to the team and escalated critical concerns to the Product Owner when necessary.
- Performed manual testing for all automated test failures to determine root causes.
- Documented and reported bugs, creating defects in the team's board for tracking and resolution.

- Conducted regression testing on new builds and versions to confirm application stability and performance.
- Participated in sprint planning meetings to review requirements and assign new user stories.
- Held weekly meetings with the manager to discuss workload, performance, and any challenges with assigned tasks.
- Maintained a Daily Run Log, recording test results, outcomes, and relevant notes.
- Communicated with the team prior to pushing changes to the main branch and resolved code merge conflicts.
- Completed pull request forms, added new test cases to test plans, and executed tests in both local branches and Lambda Pipeline before submitting pull requests.
- Performed end-to-end testing before and after creating test cases.
- Attended DEV meetings to review new features, discuss bugs, and collaborate on functionality improvements.
- Created and tracked bugs in ADO, ensuring timely resolution.
- Kept the team informed of any issues identified through the team's chat platform.

CI&T

QA Engineer (November 2022 – October 2023)

- Conducted comprehensive testing throughout all stages of the SDLC.
- Developed detailed test cases and scenarios for DEV, QA, and UAT environments.
- Developed automated test cases using Playwright utilizing Typescript and migrated test cases from Selenium Pytest, JUnit and TestNG frameworks to Playwright.
- Utilized Selenium with Python to write and execute test cases using Pytest framework.
- Maintained automated test cases with Selenium and Java using JUnit and TestNG.
- Updated and maintained existing tests, web elements, pages, and methods to ensure accuracy.
- Ran automated regression tests daily in both pipeline and local environments to verify application functionality.
- Participated in daily scrum meetings to provide updates on testing progress and address any blockers.
- Executed manual testing, including functional, regression, sanity, and smoke tests.
- Performed regression testing on new builds and versions to validate expected application behavior.
- Attended sprint elaboration meetings to discuss business requirements and new user stories.
- Collaborated with the development team to optimize application performance by testing user stories and verifying bug fixes.
- Joined weekly meetings to review bugs and features with the team.
- Reported weekly to the QA manager on project status and progress.
- Managed bug creation and tracking using JIRA and ADO.
- Created test plans and test cases in JIRA and ADO.

- Conducted end-to-end manual testing, as well as back-end database and API testing using SQL, LINQPad, Swagger, and Postman.
- Worked collaboratively to ensure software updates, bug fixes, and business requirement compliance.
- Demonstrated new software functionality to clients and stakeholders.

NTERSOL

QA Engineer (January 2022 – November 2022)

- Participated in testing throughout the SDLC stages.
- Created test cases and scenarios for DEV, QA, and UAT environments.
- Utilized Selenium with Python to write and execute test cases using Pytest framework.
- Maintained automated test cases with Selenium and Java using JUnit and TestNG.
- Updated existing tests, web elements, pages, and methods as needed.
- Executed automated regression tests daily in both pipeline and local environments to verify functionality.
- Attended daily scrum meetings to provide updates and discuss blockers.
- Performed manual testing, including functional, regression, sanity, and smoke tests.
- Conducted regression testing on new builds and versions to ensure proper functionality.
- Participated in sprint elaboration meetings to understand business requirements and new user stories.
- Worked with development teams to enhance application performance by testing user stories and confirming bug fixes.
- Joined weekly meetings to review bugs and features.
- Submitted weekly reports to the QA manager regarding project progress.
- Managed bug creation and tracking using JIRA and ADO.
- Developed test plans and test cases in JIRA and ADO.
- Performed end-to-end manual testing, back-end database, and API testing using SQL, LINQPad, Swagger, and Postman.
- Collaborated to ensure the software met business requirements and was free of bugs.
- Presented new software functionality to clients and stakeholders.

Aptar

QA Automation Engineer (September 2018 – November 2021)

- Analyzed business requirements to create test plans and detailed test cases for upcoming and new functionality.
- Selected test cases for automation and performed functional, regression, and sanity testing using Selenium WebDriver with Java.
- Worked within Agile Scrum methodology, with each sprint lasting two weeks.

- Automated web application testing using Java, Maven, Cucumber, and TestNG.
- Participated in both Test-Driven Development and Behavior-Driven Testing across projects.
- Conducted smoke, functional, system, and regression tests, and performed client requirement-based testing.
- Executed system integration testing, reported issues, tracked progress, and followed up for timely resolution.
- Attended weekly meetings to review new features, bugs, and release schedules.
- Documented test plans and test cases using Microsoft Excel, ADO, and JIRA.
- Reported daily to the QA manager.
- Participated in daily scrum meetings, providing team updates.
- Collaborated closely with developers and stakeholders, serving as an integral member of the software development team using an iterative process.

Unilever Pakistan

QA Automation Tester (February 2015 – March 2018)

- Developed test strategies for client-side verification and validation.
- Automated test cases using Selenium WebDriver with Java and TestNG.
- Created test cases utilizing element locators and Selenium WebDriver methods.
- Conducted response testing using developer tools.
- Executed Selenium test cases and reported defects as needed.
- Performed data-driven testing, cross-browser testing, and parallel test execution.
- Conducted regression testing using Selenium.
- Tested website experiences across various browsers and devices, including mobiles and tablets, using Browser Stack emulator.
- Set up automation test environments with Eclipse, Java, and Selenium WebDriver.
- Collaborated with offshore teams using test management tools such as JIRA.
- Worked with development teams to create test plans for application enhancements and fixes.
- Prepared weekly and monthly status reports.
