

Ankitaben Patel – QA Test Engineer – Manual and Automation

Savannah, GA.

Visa: US Citizen.

267-668-9848

ankitajpatel18@gmail.com

CARRIER SUMMARY:

- Over 10 **years** of experience in the Information Technology Industry prominent in Quality Assurance and software testing in diverse environments (manual and Automation).
- Proficient ability in handling **Web-based, Client-Server application** in diverse setups, and developing automation tests in technologies like; **Selenium suite (Web Driver, GRID), Cucumber, Java, Web Services, TestNG, SIT and UAT**, Diversified testing knowledge in QA especially in **Agile methodology**, as well as using **JIRA, QC/ALM**.
- Excellent testing skills in **Black Box Testing, Backend Testing, User Acceptance Testing (UAT), System Testing, Regression Testing, Integration Testing, Load Testing and Smoke Testing**.
- Experience in designing test strategy, test plan, planning and implementation of the test suite.
- Experienced in creating **Data-driven, Keyword driven frameworks**.
- Experience in **Functional and Regression testing** utilizing manual and automated testing skills.
- Solid knowledge of **SDLC, SQA Methodology**, and tools.
- Develop all lines of QA documentation including **Test Plans, Test Cases**, and **Traceability Matrices**.
- Identified correct GUI elements using various Selenium Locators like **ID, Name, Link Text, Partial Link Text, XPath** and **CSS** to find the Web Elements using selenium and creating automation scripts.
- Automated regression test cases using Jenkins build jobs, **Selenium IDE, WebDriver, TestNG, and Maven**.
- Hands on experience in using build and project management tools like **Maven** and version control tool **GIT**.
- Work experience in integrating Automation scripts (**Selenium Web Driver API**) with Continuous Integration tool **JENKINS** for scheduling or nightly batch run of the Script.
- Experienced in developing Test cases for system-level performance testing using **JMeter**.
- Extensive use of defect tracking tools, such as **Jira, ALM, Quality Center**.
- Experienced in working with different software **methodologies** like **Agile, Scrum, test driven development** and **waterfall methodologies**.
- Worked extensively in testing **Web Services API** (Soap and Restful web services) using **SoapUI**.
- Have experience developing user stories using **CUCUMBER** for behavioral driven development, integrated with **TestNG, MAVEN**.
- Highly motivated team player with analytical, organizational and technical skills, unique ability to adapt quickly to challenges and changing the environment.
- Ability to work independently with minimal supervision and perform excellently as a good team member.

EDUCATION: Bachelor of Computer Application (BCA) from Sardar Vallabhbhai University, INDIA. (Start: July 2010 End: April 2013).

TECHNICAL STACK:

Testing Tools	Selenium WebDriver, TestNG, Junit, Cucumber, Jenkins, Apache POI, Soap UI, Rest-Assured, JMeter, Maven, Jenkins
Test Mgmt Tools	HP-Quality Center, ALM, JIRA, DOORS
Servers	MS IIS, Apache, Web logic, WebSphere
Languages	Java, C, SQL
Database	MS SQL Server, MS Access, Oracle
Platforms	Windows, UNIX/LINUX, Mac OS

Application Tools	MS Office Suite (Word, Excel and Power Point, Outlook, Access)
Version Control	Git

PROFESSIONAL EXPERIENCE:

Abbott- HCL America Inc,

Feb 2021 – Till Date 2024

Project: Freestyle Libre 3

Description: Tested the Smallest and Thinnest Glucose Sensor Free Style Libre 3 System for Glucose testing. Using Free Style Libre 3 users automatically receive continuous, Real time Glucose Readings to their smartphones.

Role: QA Lead

Responsibilities:

- Conducted System Integration Testing (SIT) across various mobile and web applications that are used by patients, caregivers and healthcare professionals (HCPs).
- Involved in Design verification testing (DVT) for mobile application using different android and iOS devices including general function tests, compatibility, glucose alarms states(behavior), system tests, localization tests, reminders, data upload, sensor usage, application upgrade tests, sign in flow, Glucose messages etc.
- Performed Compatibility testing for mobile apps using various Debug, staging and release builds for different countries with latest mobile devices in market.
- Drove continuous improvement in testing process to deliver high quality product.
- Involved in creating and updating protocols based on the requirements and specifications.
- Trained and mentored new hires with detailed walkthrough of the app functionalities and using sensor with different applications.
- Arranged daily meetings with onsite and offshore leads to getting and provide project status.
- Assigned and lead the team and guiding through the process flow. Reviewing the executions.
- Review all execution reports in formal execution during release. Provide all details and reports to SWQA lead.
- Used Jira and QC to report and track bugs and impediments.
- Used DOORS for VRS linking, requirement traceability and tracing Software Requirements Specification for particular Protocol.
- Used ADB Commands for install Android build in test device and collect the logfiles for further verification.
- Creating and updating protocol in DOORS and exporting for team.
- Sending all Protocols for agile approval before Release.
- Closely worked with dev team for open defects.
- Used firebase Console for checking any crash during execution.
- Used Realm Studio for Database verification, view live objects in real time while running an app
- Well versed in the regulatory and compliance requirements of the health care industry.

Environment: JIRA, Mobile Applications (Native iOS), Android devices, DOORS, Android Studio, Sensors, Firebase, HPQC, Realm Studio

Kaiser Permanente

Oct 2018 – Jan 2021

Project: KPSOM

Description: Kaiser Permanente School of medicine is the informative site for all students and faculty members. User can search faculty by their last name or academic role or rank. There is news facilities such as recent news, related news and featured news.

Role: QA Engineer

Responsibilities:

- Arranged daily meetings with onsite and offshore leads to getting and provide project status.
- Created test plans and wrote test cases based on business requirements for manual execution and Automate.

- Involved in creation of automation framework in Selenium WebDriver using behavior driven approach like Cucumber. Extensively used Page Objects design and page navigation framework for readable test script and easy maintenance from developer perspectives.
- Worked closely with SCRUM team to create test scripts and test cases to ensure coverage of all areas of the product/feature(s).
- Tested Application on various mobile devices, including smart phones and tablets with different browsers via mobile lab.
- Run Compatibility Testing with various mobile handsets (cross Windows/ Mac and Android/ iOS platforms, cross browsers, cross mobile devices - phones, tablets, iPads etc.) to ensure that functionality working as expected.
- Test Mobile app's behavior under various interruptions: battery strength (full/medium/low), performance
- Designed and maintained test schedules, test plan, test strategy, test assignment documents for various testing activities.
- Used Jira to report and track bugs and impediments.
- Early identification and communication of risks related to assigned Projects.
- Attended daily scrum meetings early morning with the developers and architects to report on what was done the day before, what was to be done that day and report any impediments.
- Reported testing progress at the end of every sprint in the Sprint Review Meeting.
- Participated in and offered valuable contributions in all the scrum meetings (i.e. from planning meetings to retrospective meetings).

Environment: Manual and Automation Testing.

Java, Selenium WebDriver, HP QC, REST services, GIT, Jenkins, TestNG, Maven, Eclipse IDE, JavaScript, Oracle and Windows.

Scientific Technologies Corporation, Phoenix, AZ

Apr 2017 – Sep 2018

Project: IWeb

Description: The IWeb Core application provides patient immunization resource management and administration tools that work together to help and perform patient immunization management tasks. Depending on the access authorization, certain operations like the Searching for patients in the central registry (also referred to as the state registry database or the central database). Creating and editing patient demographics, vaccination records (current and historical), names of physicians and vaccinators.

Role: Automation Test Engineer

Responsibilities:

- Creating and enhancing numerous test scripts to handle changes in the objects, in the Tested application and in the test environment.
- Manually perform Functional testing including Security, System testing, Smoke testing and Back-end testing.
- Performed manual testing on new and existing functionality in each build and then regression testing on each build using Selenium WebDriver.
- Involved in analyzing system specifications, design, development and execution of test cases for Manual and Automated testing.
- Participated in SCRUM-related meeting (sprint planning, daily stand-up meetings, reviews, retrospectives and demos)
- Design, develop and implement Hybrid automation testing framework utilizing Java, and Selenium Web Driver) and test execution using TestNG
- Used Firebug to test web based application with Selenium commands and locators inside the application.
- Worked on Cross Browser testing through Selenium WebDriver by testing the website on different browsers like Chrome, IE and Firefox.
- Involved in design and implementation of Selenium WebDriver automation framework for smoke and regression test suites (TestNG).

- Used Maven for building Hybrid Test Automation Framework project and maintained Maven build files for running automated tests.
- Used Apache POI services to read the data from the excel files
- Used Properties files to maintain all the element locators used in the framework
- Used Jenkins as version tool for automated execution of tests (nightly and need based) with Maven
- Used GIT as Source version control tool, Eclipse as IDE and Log4j is used for logging different types of messages.
- Used HP Quality Center to store all testing results, metrics, implemented test plan document, created test cases, Defect tracking and reporting
- Used Jira as bug tracking tool and to store all testing results, metrics, implemented test plan document, created test cases, Defect tracking and reporting.
- Used JDBC inside the selenium script to write SQL queries and to generate reports.
- Participated QA weekly meetings and various other meetings and discussed enhancement and modification request issues and defects in the application.

Environment: Java, Selenium WebDriver, Maven, TestNG, Apache POI Jenkins, Xpath, Jira, HP QC/ALM, HTML, XML, SQL, Oracle, Windows.

Lincoln Financial, Philadelphia, PA

Jan 2016 - March 2017

Description: Lincoln Financial Group is a nationally recognized full service financial corporation that offers a range of financial services for Individual and businesses. It provides an array of financial tools and strategies, including insurance and annuities, individual and group retirement plans.

Role: QA Automation Engineer

Responsibilities:

- Interacted with the Business Clients, Product Owners, Developers and QA Manager for clear exposure to trickle down the technical/functional User Requirements & Change Requests to Test Plans and Test Scenarios.
- Identified test cases to automate. Automate those test cases using Selenium WebDriver, TestNG and Java (Apache Solr) technologies (Eclipse IDE). Contributed in framework creation.
- Good experience in REST & SOAP based web services testing using RESTFUL web services testing tool.
- Perform Functional Testing, Regression Testing, System Integration testing, (UAT) User Acceptance Testing, and End to End Testing
- Responsible in executing Selenium test scripts on different browsers and checked for compatibility.
- Tested the application in highly dynamic environment with sprint team using agile methodology.
- Automated the Test cases using Selenium for Regression testing and TestNG for grouping the tests
- Created and enhanced numerous test scripts to handle changes in the objects, in the tested application's GUI and in the testing environment using Selenium WebDriver.
- Involved in creation of automation framework in Selenium WebDriver using behavior driven approach like Cucumber. Extensively used Page Objects design and page navigation framework for readable test script and easy maintenance from developer perspectives.
- Converted commercial QTP Scripts to open source Selenium WebDriver scripts to maximize the profits of the company without compromising Quality.
- Involved in using Jenkins as a Continuous Integration server to configure with Maven.
- Used Selenium WebDriver API to automate tests on cross browser and cross platform environment. Sound knowledge on Object Oriented Programming concept and Java Language.
- Integrated Automation scripts (Selenium WebDriver API) on Continuous Integration tools Jenkins for nightly batch run of the Script. Created Project plan on Jenkins, configured scheduled using Cron job.
- Involved in Functional Testing as Unit test, Method test, Test Suite, Integration Testing using different TestNG methods.
- Configured Selenium WebDriver, TestNG, Maven tool and created selenium automation scripts in java using TestNG prior to agile release.
- Performed Unit testing with TestNG test frame work and use Bromine for easy running the test and store the result for analysis the test.

- Involved in SOAP & REST based web services testing using SOAPUIPRO web services testing tool.
- Identified the Test Scenarios based on Functional Specifications and Business Requirements.
- Performed web services testing with SOAP UI and Performed Security testing for employee login validations.
- Conducted workflow, process diagram and gap analysis to derive requirements for existing systems enhancements.
- Used firebug to identify object's ids, Name, XPath, links in the application.
- Used HP Quality Center for Test Management for functional Test Automation.
- Provide all data validation through SQL queries UNIX commands to perform Back-end testing
- Participated in Walkthrough and defect report meetings periodically.
- Responsible for keeping up with the test schedule and interacting with software engineers to ensure clear communications on requirements and defect reports.

Environment: Java, Selenium WebDriver, HP QC, REST services, GIT, Jenkins, TestNG, Maven, Eclipse IDE, JavaScript, Oracle and Windows.

HSBC Banking Group Pvt. Ltd., INDIA

Jul 2013 - Dec 2015

Project: HSBC Global KYC Tool

Description: Global KYC TOOL is an internal build web application tool used in HSBC to perform periodic reviews on their customers by documenting and corroborating the information as required by the Global KYC Procedures. Tasks in this tool include, performing the risk analysis on customers related to bribery, Money Laundering, and sanctions. Depending on the risk, the current data on customer stocks, ownership, business, and other legal documentation was reviewed to analyze if the customer pose a risk to the bank through illegal transactions.

Role: Software QA Engineer

Responsibilities:

- Arranged daily meetings with onsite and offshore leads to getting and provide project status.
- Designed and maintained test schedules, test plan, test strategy, test assignment documents for various testing activities.
- Created test plans and wrote test cases for manual execution.
- Work closely with members of the Scrum team to translate the customers' business needs or Business Cases to a technical solution.
- Work closely with SCRUM team to create test scripts and test cases to ensure coverage of all areas of the product/feature(s).
- Early identification and communication of risks related to assigned Projects.
- Involved in preparing Test Plan and Test Cases based on business requirements.
- Executed manual and automated test scripts/plans and provide defect and usability feedback to the SCRUM team in a timely manner.
- Participated in SCRUM team development and maintaining testing environments.
- Meet with the IT Architects/Scrum Masters to get an overview of the project.
- Develop an automated approach for testing with Selenium Framework — identifying toolsets and establishing the needed environment.
- Used Jira to report and track bugs and impediments.
- Performed data-driven, Functional, GUI, Black box and Regression testing using Selenium Web driver.
- Executed functional and regression test automation script for various modules of the application by using Selenium Web Driver in multiple browsers.
- Created Test Automation Script from scratch by using Selenium Web Driver with TestNG Framework.
- Provided functional and regression test automation for software applications and environments using Selenium WebDriver.
- Used Firebug Tool to identify the Object's id, Name, XPath, link, CSS Selector in the application.
- Added annotations to the test suites (selenium).
- Performed Database Testing validating data purse for Web transactions & business rules by writing SQL queries using JDBC.

- Involved in testing of the database using SQL queries.
- Created various graphs & reports for test lab and defect modules in Quality Center and used Dashboard module to track the activities.
- Attended daily scrum meetings early morning with the developers and architects to report on what was done the day before, what was to be done that day and report any impediments.
- Reported testing progress at the end of every sprint in the Sprint Review Meeting.
- Participated in and offered valuable contributions in all the scrum meetings (i.e. from planning meetings to retrospective meetings).

Environment: Java, JavaScript, Selenium IDE/ WebDriver, Cucumber, TestNG, Maven, Firebugs, Ruby, Fire Path, JUnit, Web Services, SOAP UI Pro, Quality Center.
