

ARAVIND CHUNDURI

Dayton, OH | +1 (937) 329-1946 | aravindchunduri3@gmail.com

PROFESSIONAL SUMMARY

Full-stack Software Engineer with 3+ years building scalable, secure applications across Node.js, TypeScript/Angular, Java/Spring Boot, and SQL Server/relational data platforms. Owns features end-to-end — API design, database/query optimization, testing, deployment, and production support — within Agile teams, with additional hands-on exposure to C++/C# for legacy systems and internal tooling. Strong in secure coding (OAuth2.0/OIDC/JWT, OWASP), CI/CD (Azure DevOps, Git), automated testing, and observability, with an AI-native mindset toward tools like GitHub Copilot.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript (Node.js), C#, C++, Python, Go

Frontend: Angular, HTML5, CSS3, RESTful API integration

Backend & Frameworks: Node.js (Express.js, KOA), Spring Boot, Spring Framework, Hibernate/JTA, .NET Core

APIs & Architecture: RESTful API Design (OpenAPI), Microservices Architecture, Event-Driven Architecture (Apache Kafka), Rate Limiting & Circuit Breaking

Databases: SQL Server (T-SQL, stored procedures, indexing/query tuning), PostgreSQL, Oracle, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch/OpenSearch

Cloud & DevOps: AWS (EC2, ECS, S3, RDS, DynamoDB, SQS, Lambda), Azure, GCP, Docker, Kubernetes, Terraform, Git, Azure DevOps, GitHub Actions, Jenkins

Security: OAuth 2.0, OpenID Connect, JWT, RBAC, OWASP Secure Coding, Encryption, HIPAA

Testing & Quality: Jest, Cypress, Playwright, JUnit, pytest, Mockito, Selenium/WebDriver, TDD, Code Reviews

Observability & AI Tools: Prometheus, Grafana, OpenTelemetry, Splunk, GitHub Copilot, Distributed Logging & Tracing, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Software Engineer — GE Appliances

Jan 2025 – Present

- Design and deliver full-stack features across Node.js (Express.js), TypeScript/Angular front ends, and Java Spring Boot microservices, partnering with product managers, architects, and QA through the Agile SDLC to ship customer-facing functionality on AWS (ECS, EC2, SQS, S3, DynamoDB, RDS) and Azure.
- Build and harden RESTful APIs (OpenAPI-aligned) with OAuth2.0/JWT authentication, RBAC, request validation/rate-limiting, and OWASP-aligned secure coding practices, strengthening security posture and reliability for production traffic.
- Design and tune relational data models and complex T-SQL/SQL queries and stored procedures across SQL Server, PostgreSQL, and Oracle-backed services, improving query performance and data integrity for high-volume workloads.
- Own CI/CD pipelines (Azure DevOps, Git) and Kubernetes-based deployments, and maintain legacy C++/C# desktop tooling and Windows-based utilities that support internal test automation and diagnostics workflows.
- Migrated legacy monolithic applications to containerized, cloud-native microservices (Docker/Kubernetes), improving scalability and deployment velocity across multi-region environments.
- Incorporate AI-assisted development practices (GitHub Copilot, LLM-based summarization/retrieval) to accelerate delivery and code reviews; build observability tooling (Prometheus, Grafana, OpenTelemetry) and lead root cause analysis, enabling near real-time analytics and faster incident resolution.

Software Engineer — Falabella India

Jan 2022 – Jul 2023

- Designed and built customer-facing vendor integration modules using Java, Spring Framework, and Hibernate/JTA within a high-traffic transactional banking platform, increasing transaction throughput by 30%.
- Migrated legacy modules — including C++/C# transaction-processing components — to Spring Boot microservices, reducing downtime and improving scalability for high-frequency, high-volume workloads.
- Built REST-based transaction APIs integrating Oracle and PostgreSQL data stores, improving financial message delivery consistency by 15% while managing 1M+ customer records via Hibernate/JTA.
- Implemented multi-threaded, multi-process failover recovery mechanisms in C++ for distributed financial data processing in a Unix environment, improving fault tolerance under load.
- Owned end-to-end deployments, RCAs, and security patch reviews using Git; authored technical documentation for solution designs, API specs, and runbooks; applied core data structures and algorithms to build efficient, well-tested backend systems (JUnit, pytest).

RESEARCH & PROJECTS

ROAMM — Real-Time Health Monitoring Platform

- Engineered high-throughput, service-oriented data ingestion pipelines (Azure Blob/Table Storage, RESTful APIs) processing 1TB+ daily IoT payloads with 99.9% durability, reducing query latency by 25% and sustaining 5K+ concurrent requests under peak load, with OAuth2.0/encryption to meet enterprise standards.
- Deployed a cloud-native telemetry pipeline using containerized microservices and Kubernetes; built CI/CD rollback/recovery workflows and dashboards as Designated Responsible Individual (DRI), cutting MTTR to under 15 minutes at 99.9% uptime and expanding automated test coverage to 85%, reducing production defects by 30%.

EDUCATION

University of Dayton, USA | Aug 2023 – May 2025

Master of Science, Computer Science and Engineering
