Summary

High-impact BI Developer with 3+ years of experience delivering scalable, enterprise-grade analytics solutions across healthcare and financial ecosystems. Specialized in dimensional modeling, semantic layer architecture, and cloud data warehousing using Snowflake and BigQuery. Expert in optimizing SQL performance and building KPI-driven executive dashboards while orchestrating resilient data pipelines with Spark, Kafka, Airflow, and dbt. Combines advanced statistical modeling with strong governance frameworks to drive measurable operational efficiency, regulatory compliance, and strategic decision-making through trusted data platforms.

Technical Skills

Programming & Data Processing: Python (Pandas, NumPy), SQL (Advanced Joins, CTEs, Window Functions, Query Optimization), R, PySpark, Data Transformation, Statistical Analysis, Data Profiling, Automation Scripting, ETL Development

Business Intelligence & Semantic Modeling: Power BI, Tableau, Looker, DAX, Tabular Modeling, Semantic Layer Design, Row-Level Security (RLS), KPI Engineering, Executive Dashboards, Performance Tuning, Deployment Pipelines

Data Warehousing & Architecture: Snowflake, BigQuery, PostgreSQL, MySQL, MongoDB, Dimensional Modeling, Star Schema, Snowflake Schema, Data Mart Strategy, Partitioning, Indexing Strategies

Cloud & Pipeline Engineering: AWS, Azure, GCP, Airflow, dbt, Spark, Kafka, REST APIs, Workflow Orchestration, Incremental Processing, Data Integration

Advanced Analytics & Forecasting: A/B Testing, Hypothesis Testing, Predictive Modeling, Time Series Analysis, Regression Modeling, Cohort Analysis, Customer Segmentation, Anomaly Detection

Governance, Security & Delivery: Data Governance, Data Quality Frameworks, GDPR, HIPAA, SOC 2, Git, Jira, Agile Delivery, CI/CD Integration, Documentation Standards

Professional Experience

BI Developer, Sharecare

Aug 2025 – Present | Remote, USA

- Supported population health analytics initiative by transforming raw wellness engagement data using BigQuery and SQL window functions, improving monthly performance reporting accuracy by 31% for care management teams.
- Developed interactive Tableau dashboards tracking preventive screening adherence across 15 enterprise clients, standardizing healthcare KPIs and accelerating stakeholder insight delivery during quarterly operational reviews.
- Orchestrated incremental data pipelines in AWS using Spark and Kafka to process wearable device streams, reducing data latency by 28% for near real-time member engagement analytics.
- Structured healthcare data marts through Snowflake schema modeling in BigQuery, enabling scalable cohort-based outcome analysis supporting 40+ clinical program managers across digital health initiatives.
- Applied regression modeling and time series analysis in R to forecast member engagement trends, strengthening proactive outreach strategies within chronic condition management programs.
- Enforced HIPAA-aligned governance controls and CI/CD-based BI deployments with Git workflows, ensuring secure dashboard releases and improving version traceability across analytics deliverables.

BI Developer, TCS

Jan 2021 – Jul 2023 | Remote, India

- Modernized fragmented retail banking reporting ecosystem by architecting dimensional models in Snowflake and optimizing complex SQL transformations, cutting report generation time by 42% across lending analytics workflows.
- Engineered enterprise-grade Power BI semantic models using Tabular modeling and advanced DAX calculations, standardizing KPI governance and accelerating executive financial review cycles by 35% organization-wide.
- Automated end-to-end data pipelines with Airflow and dbt, integrating REST APIs and core banking databases, improving refresh reliability to 98% and reducing manual reconciliation efforts significantly.
- Strengthened regulatory reporting controls by implementing Row-Level Security and governance frameworks aligned with GDPR and SOC 2, securing data access for 120+ cross-functional stakeholders.
- Enhanced analytical performance through PostgreSQL partitioning and indexing strategies, accelerating high-volume CTE-driven risk analytics queries by 38% supporting audit and compliance functions.
- Applied cohort analysis and predictive modeling in Python to identify high-risk customer segments, enabling targeted retention strategies within retail banking portfolios and improving portfolio stability.

Certifications

- Google Business Intelligence Professional Certificate (Aug 2025)
- IBM Data Analyst Professional Certificate (Data Analysis & Visualization with R)
- McKinsey.org Forward Program (Dec 2025)
- Bank of America Global Markets Sales & Trading Analyst – Forage (May 2025)

Education

Master of Science in Business Analytics, Trine University

Aug 2023 - Dec 2025 | Indiana, USA

Bachelor of Business Administration, Osmania University

Jun 2019 - May 2022 | HYD, India
