beulah.jayasingh@gmail.com

PROFESSIONAL SUMMARY

- 13 years of experience in Automation and Manual testing in Manufacturing, eCommerce, data center, product engineering services, and video domains
- Experience in Sanity, Functional, Regression and end-to-end testing
- Experience in Mobile application testing including iOS (iPhone/ iPad), Android (Smartphones and tablets), mobile simulator testing
- Experience in set top box testing, API Testing experience using Parasoft SOA tools and POSTMAN
- Experience in Salesforce CRM - Classic and Lightning, Microsoft Dynamics D365 CE, D365 Finance and Operations, ServiceNow
- Experience with database validation using Sql Server Management Studio
- Experience in automation using Selenium BDD, Perl scripting, basic shell scripting, including automation framework development
- Possess a strong understanding of STLC and test automation lifecycle
- Leveraged AI agent to generate test scenarios for user stories, and test data creation
- Experience in leading QA test teams - test planning, effort estimation, test case assignment, tracking test execution, providing testing metrics and defect reports
- Strong experience in Quality Assurance, User Acceptance Testing (UAT), Test strategy Development, and Test Automation
- Experience in SAFe methodology, Agile, Waterfall methodology.
- Experience in using Rally agile software used for creating user stories, sprint planning, iterations and task tracking.
- Management of test cases and execution using HP Quality Center/ALM, Salesforce UAT Tracks, Azure DevOps
- Defect logging and tracking using HP Quix, Bugzilla, JIRA and Azure DevOps
- Experience in SCM tool - Tortoise SVN and Jazz (IBM Rational Team Concert) for source control management
- Strong experience in translating business requirement documentation to test scenarios/cases and test automation feasibility analysis
- Excellent analytical and problem-solving abilities
- Good exposure of interaction with clients, and third-party vendors with excellent communication skills
- ASQTB certified tester

TECHNICAL SKILLS

Languages: Perl scripting, HTML, Shell scripting, Expect, Net SSH Expect, Java, TestNG

Database: Azure Cosmos DB, Informix DB, Microsoft SQL Server Management DB

Testing Tools: HP ALM, Parasoft SOA Test, Postman, SOAP UI, Selenium, Cucumber, IntelliJ IDEA, Jenkins

CRM: Salesforce Classic and Lightning modes, Microsoft Dynamics CRM/D365, ServiceNow

Mobile Devices: iOS/iPad/iPhone

OS: Windows, Linux, UNIX, Solaris, Mac OSX

Defect tracking Tools: Bugzilla, HP Quality Center/ALM, Salesforce UAT Tracks, PEGA, JIRA, Azure DevOps

Other Tools: Net-SNMP, iperf, Tortoise SVN, Jazz Administration (IBM RTC), Git, IBM AS/400

EDUCATION/CERTIFICATION

- Bachelor of Engineering in Computer Science and Engineering – 2008, KCG College of Technology affiliated to Anna University
- ASQTB Certified Tester, Foundation Level – September 2021

PROFESSIONAL EXPERIENCE:

QA Analyst III

Park Place Technologies (May 2023 – present)

Project Description: Testing integration of Microsoft Dynamics D365 CE with servicePath CPQ application for quotes and service contracts, testing for supply chain workflow project with Dynamics D365 and ServiceNow

Roles and Responsibilities:

- Analyze functional requirements and business process flows across work streams to ensure alignment with project objectives
- Analyze user stories, develop test scenarios and create test cases in Azure DevOps
- Develop and maintain test suites and test cases
- Work with QA, business team members and developers to ensure test coverage of assigned modules
- Manual execution of test cases for Functional, end-to-end, Regression and smoke testing
- Testing integration of quotes, opps on Dynamics D365 Sales and integration to servicePath (CPQ) for contracts, including verification for Billing/Financial workflows in D365 FO
- Validated end-to-end supply chain order workflows in D365 FO (transfer, purchase, intercompany, and sales orders, including pick/pack/ship)
- Conducted end-to-end testing across FO modules including inventory, order management, warehouse management, invoicing, and customer returns
- Performed API testing using Postman to validate request/response payloads and status codes for system endpoints
- Warehouse management order workflow testing using mobile simulator
- Performed data verification, event sequencing and validation in Azure Cosmos Portal – Data Explorer
- Database validation using Sql Server Management Studio
- Log, track and verify defects in Azure DevOps and JIRA
- Cross platform testing in collaboration with other QA testers
- Critical testing for key go-live functionalities related to supply chain orders
- Lead all testing efforts for Services workstream integration, owning test planning and test suite creation/execution for phased launches
- Provide technical guidance and troubleshooting support to other QA testers
- Collaborate with BAs and business users for preparing and assisting with UAT
- Provide testing support for production issues for phased launches.
- Address normalization testing for orders with international addresses
- Leveraged internal AI agent to generate test scenarios for user stories, and test data creation
- Integration testing involving ServiceNow and end to end verification
- Coordinate with developers, business analysts, product owners, third party vendors and other stakeholders during different stages of testing
- Participate in Agile ceremonies – PI planning, sprint planning, daily standup, demos and sprint retrospective meetings,
- Provide periodic testing status reports for project management

Testing Analyst

eGrove Systems Corporation for J M Smucker (Apr 2022 – Dec 2022)

Project Description: Testing JMS AIRE application on the PEGA platform

Roles and Responsibilities:

- Analyze functional requirements and business process flows
- Analyze user stories and design/manage tests in an Agile project implementation
- Work with IS and Business team members to develop test cases
- Manual execution of test cases for Functional, end-to-end and Regression testing
- Log and track defects in PEGA Agile Studio
- Retest bugs/defects and work them to completion
- Coordinate with developers, business analysts and other stakeholders during different stages of testing
- Participate in sprint planning meetings, daily standup meetings and sprint retrospective meetings

Software Quality Test Analyst

eGrove Systems Corporation for MTD Products (Dec 2017 – Feb 2022)

Project Description: Testing websites manufacturing and selling outdoor power equipment and parts, and associated Salesforce customer support applications.

Roles and Responsibilities:

- Execution of automated test suites using Selenium Cucumber framework built using Java for Regression testing
- Utilized automation scripts using Selenium WebDriver, Maven project and integration with Jenkins for daily runs
- Utilized xpath locators for UI application testing
- Built and managed automated Selenium test suites with version control in Git and executed through Jenkins pipelines
- Analyze use cases and functional requirements from business requirement documents
- Preparation of QA test plans, test estimates, test scenarios, and test cases
- Manual execution of test cases for Functional, Regression, QA end-to-end testing for commerce websites and Salesforce integration projects
- Maintain user accounts and permissions, creating custom fields and record types in Salesforce
- Salesforce service cloud testing
- REST API services testing using POSTMAN and validation of responses
- End to end testing for eCommerce orders originating from Websphere, Salesforce commerce cloud and verification in COM/ERP systems
- Tested and validated order and payment workflows in a COM/ERP system on IBM AS/400
- Execution of test cases on mobile devices - Apple iPad, iPhone and Android
- Coordinate with developers, business analysts, product owners, third party vendors and other stakeholders during different stages of testing
- Log and track defects in Salesforce UAT Tracks
- Participate in and support User Acceptance Testing (UAT) for Salesforce projects – testing integrations and new functionality for eDealer community
- Preparation of test execution status reports, testing metrics reports to share with various stakeholders

- Participate in testing strategy meetings, defect triage meetings, daily standup meetings, FMEA meetings
- Led testing for several projects, responsible for providing test estimation, assigning test cases, and providing test status reports, defect reports and test summary reports
- Create and maintain Salesforce UAT Track views, test cases, reports and dashboards
- Contributed to creation of tool to estimate QA testing efforts for projects

Senior Test Engineer

L&T Technology Services (Apr 2013 – Dec 2014) for Cisco Systems

Project Description: Cisco set-top box testing for Solaris based network controller application, DNCS (Digital Network Control System). The application provides set top box solutions for multiple system operators ranging from system configuration, source creation, and subscription package creation to management of connected devices such as modulators.

Roles and Responsibilities:

- Automation of test cases using Parasoft SOA Test server with Java, and Web UI application testing for Cisco set-top box applications
- Failure analysis and fixing issues from automation run reports
- Modification of existing test suites/modules to support changes in current behavior or test plan changes.
- Functional test automation with end to end video testing
- Log and track defects, update test results in Cisco TIMS
- Documentation and maintenance of test suite framework, execution and wiki updates for trouble shooting problems.
- Coordination with manual test team, and development teams during different releases to update results executed using automation test suite
- Automation team metrics report preparation.
- Knowledge transfer for new joiners

Test Automation Lead

Wipro Technologies Ltd for HP (Jan 2012 – Apr 2013)

Project Description: Virtual Connect is a set of interconnect modules and embedded software for HP Blade System c-Class enclosures that simplifies the setup and administration of network and storage connections. The Virtual Connect Manager provides support for many protocols and features such as Server profiling, SNMP, LACP, LVLAN, FC, Flex-10 etc

- Preparation and execution of test plans, test cases for HP server products
- Develop automated tests and execution using Perl testing framework
- Generation of test logs and failure analysis, verification of testing results
- Defect reporting and test reports using HP QC/ALM
- Assign test cases for execution, and conduct test script reviews
- Provide technical guidance to team members for test execution, product queries
- Conduct daily scrum meetings with team for test execution status updates
- Resolve product issues from offshore team
- Execution of automated and manual test cases and log defects as needed
- Provide regression support and fix bugs.
- Participate in revision of review checklists, analysis of script failures, code reviews.

- Documentation and maintenance of automation framework installation, test bed setup and execution.

Test Automation Engineer

Wipro Technologies Ltd (Nov 2009 – Dec 2011)

- Analysis of test cases for the product and check feasibility for automation
- Execute tests manually, develop and execute scripts in Perl, API testing using SOAP UI
- Used Expect and Net::SSH expect for automation of tests requiring log in/command execution on HP Procurve and Cisco switches
- Integration testing using HP Quality Center, and run script batches from QC.
- Participate in design and code reviews for automated tests
- Coordinate with manual testing team, for defect logging and defect verification. Worked with manual team for performance testing.
- Coordinate with onsite team, provide support during regression testing, analyze and fix bugs during different releases.
- Develop functions for libraries, and provide enhancement for functions
- Mentor new joiners and provide technical input for product or domain related queries
- Log and track product defects using defect management tool HP-Quix
