

GIUSEPPE LOCONSOLO

CURRICULUM VITAE

6315 N Atlantic Ave
97217 Portland (OR)

Cell-phone: 503-360-3356
@mail: pinoloconsolo@gmail.com

PERSONAL SKILLS AND COMPETENCES

Programming languages :

- **Java :**
LTS version 8, 11,17,21,26
Enterprise Edition J2EE JSP, EJB,JSF,Facelets
- **Java Libraries/Frameworks:** Hibernate ,Spring, Spring Boot ,Spring WS.. Struts MVC Framework, Java 3D, JFC, JDBC, JMS, JTA, JNDI, Swing/AWT, Reflection, NIO, RMI, RMI-IOOP, SAX, DOM, Jakarta Commons, Jakarta DBCP, JUnit , Xpath, Xerces, JAXP, JAXR, JAXM, Java Spring,Rest,
- **Java IDEs:** Proficient with JDeveloper , Eclipse and JBuilder IDEs
- **Development/build Tools:**Ant,Maven,Github.,Docker
- **Object Programming :** extensive use of UML diagrams , methodologies and tools in design/development phases of all projects.
- **Web Services:** Axis,CXF, Spring WS
- **C/C++:** C, C++, Open GL libraries. (Visual C as IDE on Win, KDeveloper on Linux). C also used for Microchip PIC Microcontrollers programming.
- **Assembler:** NASM , MASM (Intel processors assembler), Mplab for PICs.
- **Shell:** UNIX bash and shell scripting,Windows Powershell

Tag/XML languages :

- HTML, XHTML,CSS, JavaScript , XML, XSL, XSLT, WML and WMLScript

	▪ WEB SERVICES: UDDI, WDSL, SOAP.
Web Application Servers :	▪ Web: Apache ,Microsoft IIS. ▪ Java Web Container: BEA Weblogic, Websphere WAS and WPS, Jakarta Tomcat, Jetty, Oracle IAS . ▪ Messaging Middleware: OpenJMS, IBM MQ.
Networking:	▪ TCP/IP, UDP/IP protocols family. From low level stack configuration on Unix OS to application layer protocols. ▪ (POP, DHCP, SMTP,HTTP,HTTPS, SSL/TLS, FTP, X11, Telnet, Ethernet, SSH). N network traffic sniffing with “Etherea/Sharkl” sniffer and in certificate handling (keystore, signing, exporting, etc) with OpenSSL.
Databases : administration and tuning	▪ Languages: SQL, PL/SQL ▪ Platforms: Oracle, MYSQL,Postgres, MSAccess.IBM DB2 ▪ Tools: MySqlcc, Oracle SqlDeveloper

WORK EXPERIENCES

JAVA DEVELOPER AT NIKE

(July 2013- Today).

Involved in Nike Store E-Commerce platform.

I worked mostly on 2 main fronts:

1) Development of Tesla web application. Tesla is the main customer facing app for Nike e-commerce www.nike.com, store.nike.com that is essentially an aggregator app that combines many other Nike web based platforms (order placement, order management, product data management, search app, etc) developed and deployed on tens of server geographically dispersed both on HP and Amazon AWS datacenters. The app is mostly based on Spring in the back-end and leverages several other java based technologies like Hibernate, Spring-WS Restful services, Hystrix (fault tolerant management of calls toward external web services), Maven, Ehcache and Memcached for 1st and 2nd level caching, Apache Httpd for first routing of requests.

2) Platform maintenance & admin.

Because of the highly-distributed topology of Nike infrastructure (functionalities spread over tens of separate applications and related databases), the job required an effort in isolating the issues when they appeared, collecting evidence of root causes and coordinating with different involved teams to implement fixes. Same for coordinating changes and evolution of the platform.

TECHNICAL LEAD AT USBANK

(March 2011- July 2013).

Worked on several applications for USBank wholesale business: customers line, in charge of storing checks and remittances images (and related metadata) in proprietary archive servers (Imagehawk is the name of the storage vendor) and make them available/searchable to users through a web application. Struts, Axis ws, itext-java and Hibernate were the key technologies involved

TECHNICAL LEAD AT KAISER PERMANENTE

(March 2010-March 2011).

Worked on Kaiser Permanente new claims processing infrastructure integration (Excelis), based on tens of applications running on different hardware, middleware and communicating through web services (Http and Jms transports).

Developer for ODS Companies

(August 2007 – March 2010)

Involved in the design, implementation, documentation of j2ee applications based on Struts and Jsf/facelets as MVC frameworks, Hibernate as Orm.

Applications needed to interface with as 400 mainframes to exchange data with the old system/infrastructure that was being migrated/converted to a more contemporary one. The apps I worked on were connected to a Sybase database, exposed a battery of web service for interacting with other internal/external apps and were all running over IBM Aix application server.

A big part of the job consisted in the reverse engineering of the Sybase db schema, given the poor documentation provided by Trizetto, the vendor of the main product on which the entire company business is based.

I have also been involved in the design and implementation of an Edi transactions management application to export/import subscribers related data (like claims, eligibility, etc) with external entities like other insurance companies or medical associations providers systems.

ARCHITECT/DEVELOPER/PROJECT MANAGER FOR COAXIS INCORPORATED

(AUGUST 2004 -AUGUST 2007)

Involved in the context of the beverage industry, in the design and implementation of Java web applications (J2EE running on AIX application server running both on Windows and Linux servers) and, on the client side, applications written in C# running on Windows Mobile Handhelds/PDA.

Intensive usage of multithread / transactional safe technologies.

Realized a series of "Exchange" packages to retrieve/pass data to other vendors platform using xml as format and JAXB (Java API for XML Binding), JAXP (Java API for XML Parsing) and XSLT to transform data to/from in memory objects.

Extensive experience in SOAP and web services on Open Source implementations (like Apache Axis) to exchange data to/from host to external apps, etc.

On the web tier, used AJAX (Asynchronous Javascript and XML) to improve responsiveness of the UI.

On the Model tier, mainly worked on PostgreSQL with Hibernate as persistence layer to communicate with the DB.

Eclipse + MyEclipse plugin used as reference IDE platform.

BIRT java library used to generate pdf printable reports.

CONSULTANT ANALYST/DEVELOPER FOR H3G ITALY
(May 2003 – August2004)

Worked in IOT (Inter Operability Testing) department, testing mobile terminals compatibility and performances in H3G packet network environment.

My activities were focused on :

- OTAP (over the air provisioning),
 - TCP/IP compatibility and performance evaluation (I designed a J2EE application to log packets and display throughput behavior of mobile user-agent dynamically)
 - SSL/TLS compliancy
 - XHTML, HTML, WML , CSS, JavaScript
 - Platform applications availability and failure discovery, using developed MIDlet suites and a server web app (JSP, Servlets and EJB) in J2EE technology.
 - IP & SMS Push messages.
 - Location services (GPS).
 - MMS (multimedia messaging service)
 - UNIX/LINUX SERVER NETWORK AND SYSTEM ADMINISTRATION.
- Participated in a broad range of studies and researches regarding new concepts and possible developments for the Italian Air Force logistics administration (client/server approach, IBM WebSphere, QoS).

CONSULTANT AT TIM (TELECOM ITALY MOBILE)
(MARCH 2002 – MAY 2003)

Worked in TIM SW Development division, on web Java application for WAP technologies like MMS (Multimedia Messaging Service), WAP push and EMS.

Wrote an application to analyze MMSC log files, match with DB stored traffic data and dynamically visualize (J2EE WEB APP) the obtained results.

Participated in the MMS-C (MMSCenter) installation and testing procedures, including DB implementation and tuning.

JAVA AND C DEVELOPER AT NETIKOS S.P.A. (TELECOM ITALY GROUP)
(AUGUST 2001 - MARCH2002)

Worked in the development of standalone and server side Java applications (Java Servlets, Java Server Pages, EJB and Applets).

Produced dynamic WAP sites, using WML, WML Script and the JSP Openwave tag-library.

Utilized Java J2ME, J2EE and J2SE platforms.

**ANALYST/ DEVELOPER AT ENEA RESEARCH CENTER IN FRASCATI (ROME)
(JULY 2000-AUGUST 2001)**

Developed a software user interface for the 3D visualization of data acquired by laser radar. Related to this, I studied, developed and applied algorithms for image-data fitting and matching, noise erasure/attenuation.

EDUCATION AND TRAINING

**ENGINEERING PROFESSIONAL
JANUARY 2002**

State Examination and qualification for the Engineering profession with a 110/110 grade. Registration in the Order of Italian Engineers.

**UNIVERSITY GRADUATION
MAY 2001**

Electronic Engineer Master degree, specialized in Radio transmissions, in the "Tor Vergata" Rome University.

Grade: 100\100 with honors.

Thesis title: "Algorithms and systems for visualization and 3D reconstruction of real objects Laser radar scanned".

Advisor: Prof. F. Vatalaro

**HIGH SCHOOL DEGREE
JUNE 1993**

Scientific Secondary School Degree: in the "Plinio Seniore" institute in Rome.

PERSONAL INFORMATION

Name: Giuseppe Loconsolo

Address: 6315 N Atlantic Ave 97217 Portland (OR)

Telephone: 503 3603356

E-mail: pinoloconsolo@gmail.com
