EDUCATION

University of California, Merced | Merced, CA | GPA: 3.809

Bachelor of Science, Computer Science and Engineering

August 2022 - May 2026

- Minor: Applied Mathematics

SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, C++
- **Machine Learning:** XGBoost, Scikit-learn, Pandas
- **Full-Stack:** Next.js, Tailwind CSS, RESTful APIs, FastAPI, Flask, SQLAlchemy
- **Tools:** Git, GitHub, Docker, GitHub Actions, Postman, Modal
- **Soft Skills:** Communication, Time Management, Leadership, Team Collaboration, Quick Learner

PROJECTS

FIFA World Cup Match Prediction Model

- Developed a multiclass XGBoost model in Python to predict international soccer match outcomes using historical match data.
- Engineered features including Elo ratings, recent team form, rolling goal averages, and opponent-strength-weighted statistics.
- Built a sequential feature pipeline to prevent data leakage by computing rolling statistics using only prior matches.
- Utilized pandas and scikit-learn for data preprocessing, feature engineering, model training, and evaluation.

Two Guys Auto Repair Website

- Built a full-stack web app using Next.js and Tailwind CSS for a responsive business site with a customer inquiry workflow
- Developed FastAPI backend for form handling, validation, and REST API endpoints
- Integrated Resend API for automated email notifications from contact submissions
- Containerized application with Docker and deployed via GitHub Actions CI/CD

Cropsplat - Backend Pipeline System

- Worked on a team building an AI-powered platform that converts crop videos into interactive 3D models
- Built RESTful APIs with FastAPI for authentication, scan uploads, and results
- Designed SQLAlchemy/PostgreSQL database models and integrated Supabase storage
- Developed a serverless GPU processing pipeline using Modal with Gaussian Splatting
- Created GitHub Actions CI/CD workflows and wrote Dockerfiles for app deployment
- Implemented pipeline tracking, error handling, and user access control

Car Forum

- Built an interactive web forum for car enthusiasts using HTML, CSS, and vanilla JavaScript for the frontend.
- Developed a backend with Flask, including a RESTful API to handle the forum data.
- Designed endpoints for creating, retrieving, updating, and deleting posts, leveraging JSON for data exchange.
- Incorporated a relational database with SQLAlchemy for data storage.
- Utilized Git for version control and tested API endpoints with Postman.

PROFESSIONAL EXPERIENCE

McDonald's | Livingston, CA

Crew

June 2022 - Present

- Operate in a fast-paced, high-volume environment while maintaining accuracy and efficiency
- Collaborate with team members to ensure smooth daily operations and timely service
- Manage inventory restocking and organization to support continuous workflow
- Provide customer service while handling multiple tasks under pressure
