

Kapish Patel

Hicksville, NY | +1 2066788776 | patelkapish5@gmail.com

SUMMARY

Backend engineer with 5+ years of experience designing, building, and owning distributed, event-driven systems in production. Proficient in Python and Java for developing scalable APIs, data pipelines, and durable workflows. Experienced with serverless and cloud-native architectures on AWS (Lambda, DynamoDB, S3) and implementing CI/CD pipelines using Git, Docker, and Azure DevOps. Skilled in applying SOLID principles, design patterns, and test-driven development to deliver maintainable, high-performance software.

TECHNICAL SKILLS

- Programming skills:** Python, Java, Javascript, Typescript, Angular, React.
- Cloud and DevOps:** AWS, Docker, Git, Github Actions, Azure Devops, Ubuntu, Linux.
- Database:** MS SQL, Postgres, MySql, MongoDB, Dynamo DB.
- Core Competencies:** Object Oriented Programming, Agile Development, Software Development Lifecycle.

PROFESSIONAL EXPERIENCE

Software Engineer, TCS, Remote	Nov 2025 – Present
- Built a role-based web application using React and Spring Boot to manage workflows and user activities, supporting 1K+ active users and improving task completion efficiency by 25%. - Designed secure REST APIs with JWT-based authentication and integrated PostgreSQL for efficient data handling, reducing query latency by 30% through indexing and optimized schema design. - Deployed the application on AWS (EC2, S3, RDS) with Docker and GitHub Actions CI/CD pipelines, reducing deployment time by 40% and ensuring high availability across environments	
Software Engineer, CivicPlus, Hicksville, NY	Dec 2024 – Nov 2025
- Designed and optimized RESTful APIs using Python and Java, processing 700K requests/week; reduced average response time from 2.0s to 0.5s through caching, query optimization, and efficient data modeling. - Improved platform reliability by 40% by implementing unit and integration testing, increasing test coverage to 80%+ across a large-scale system supporting 340M users using TDD, Jest, and Pytest. - Accelerated release cycles by 30% and saved 100+ developer hours per sprint by building CI/CD pipelines with GitHub Actions, Docker, Terraform, and AWS, ensuring consistent deployments across environments. - Refactored 3 core microservices, reducing technical debt by 50% and lowering production incidents across 10+ critical workflows using OOP principles and scalable design patterns. - Developed accessible, high-impact front-end features using React and JavaScript, achieving ADA compliance for 8.5M users and contributing to reduced churn and \$20M+ ARR growth. - Optimized database performance by 75% (2s → 0.5s) through schema redesign (MySQL, DynamoDB), pagination strategies, and ORM tuning with Prisma and Hibernate for improved scalability.	
Software Engineer, Sports Excitement, New York City, NY	Jan 2024 – Dec 2024
- Generated \$400/month in early revenue by leading end-to-end MVP development in 10 weeks; onboarded 20+ users within 14 days to validate product-market fit using Node.js, Express, React, and Google Cloud Platform. - Designed a scalable service-oriented architecture supporting 4,000+ users under load testing while reducing operational costs by 25% through well-defined API contracts, optimized data models, and caching strategies. - Improved code quality by reducing cyclomatic complexity from 18 to 9 across 5 core modules, enhancing maintainability and system stability using SOLID principles and proven design patterns. - Increased release cadence by 50% (monthly → biweekly) by implementing Agile sprint practices and automating CI/CD pipelines with GitHub Actions, Docker, and unit testing, eliminating 90% of manual deployment effort.	
Software Engineer, Anant Pharma, Ahmedabad, India	Apr 2019 – Jul 2022
- Architected and scaled RESTful APIs in a Node.js application, increasing throughput from 400 to 2M+ requests/week while improving system flexibility and security for 2,000+ users using JavaScript, AWS, and React. - Automated reporting workflows using Python and MySQL, reducing manual effort by 60% and improving data accuracy by 20% by replacing spreadsheet-based weekly reporting with scalable pipelines. - Built and optimized CI/CD pipelines, reducing deployment time by 97% (2 days → 90 minutes) by automating build, test, and release processes using Git, Docker, AWS, and Azure DevOps. - Improved product reliability by reducing production defects by 35% through expanding automated test coverage to 70% across a 100K+ LOC codebase using Jest, JUnit, and robust unit/integration testing.	

EDUCATION

Masters of Science in Computer Science , Seattle University, USA	Sept 2022 – Jun 2024
Bachelors of Science in Information Technology , Ganpat University, India	Aug 2018 – Jun 2021
