Work Experience

Gerent

Aug 2024 - Present

Sr. Salesforce Administrator / Business Analyst

Texas

- Lead Salesforce administration and configuration of Sales Cloud and Health Cloud for enterprise clients, using declarative tools, change sets, and permission sets to deploy custom objects and fields, which enables the organization to meet client requirements and improve system reliability
- Serve as Salesforce Business Analyst, partnering with business stakeholders to gather requirements, define user stories, and translate business needs into scalable Salesforce and Seismic solutions, delivering clear specifications that accelerate development and meet stakeholder expectations
- Facilitated requirement workshops and created process maps, user flows, and functional documentation to keep business and technical teams aligned
- Administered Salesforce environments end-to-end, including user provisioning, role, profile, and permission set management, sandbox refreshes, and environment coordination
- Implemented declarative automation using Salesforce Flows, validation rules, approval processes, and workflow rules to streamline healthcare and sales processes
- Supported Health Cloud data model and security concepts while focusing on core Salesforce platform and Sales Cloud functionality
- Configure Sales Cloud features including lead management, opportunity management, forecasting, pipeline visibility, and reporting to support sales operations and lead-to-opportunity processes

- Build and maintain reports and dashboards for business users and leadership, using SOQL and Microsoft Excel to support data analysis and provide visibility into KPIs and operational metrics
- Ensure data quality, data governance, security, and compliance through regular audits, data cleansing, access reviews, and Salesforce Data Loader activities
- Coordinated UAT testing, validated business scenarios, and supported releases to ensure successful deployments
- Managed release activities and deployments using Copado and Salesforce change management best practices at an administrative level
- Created and maintained custom objects, fields, page layouts, and Lightning Record Pages to improve usability and user adoption
- Conduct end-user training sessions, create SOPs, and provide ongoing production support for Salesforce and Seismic users

Amazon

Jun 2021 - Jul 2024

Salesforce Administrator / Business Analyst

Texas

- Supported Salesforce Sales Cloud and Service Cloud for a large internal user base, maintaining platform stability and resolving daily operational issues, which improved overall system reliability and lowered incident volume
- Served as primary point of contact for internal teams, triaging user requests, incidents, and enhancement requests through ticketing workflows
- Managed queue-based support models and prioritized requests based on business impact and SLAs
- Handled user access provisioning, role and permission updates, and security reviews in compliance with internal governance standards
- Supported Lightning Experience adoption by optimizing Lightning Record Pages and assisting users during post-migration stabilization
- Build operational and management-level reports and dashboards to track pipeline health, case trends, and user adoption metrics, using Microsoft Excel to analyze structured and semi-structured data
- Assisted business teams with requirement clarification, acceptance criteria validation, and UAT execution for internal Salesforce enhancements
- Coordinated sandbox refreshes and validated test data to support ongoing development and testing processes
- Supported metadata deployments using Change Sets and Copado under established release processes
- Conducted root-cause analysis for production issues and worked with technical teams to ensure timely resolution
- Provided ongoing end-user training and documentation to improve Salesforce adoption and reduce support tickets
- Maintain data accuracy through routine audits, validation checks, cleanup activities, and data governance practices across Salesforce records

Infor

Jan 2018 - Dec 2020

Salesforce Administrator

Hyderabad, India

- Created and maintained custom objects, custom fields, record types, and custom applications using Salesforce Setup and Change Sets, enabling the sales team to capture new product data and reducing manual entry errors
- Configured standard Salesforce objects including Accounts, Contacts, Leads, Campaigns, Opportunities, Activities, Reports, and Dashboards
- Gathered and documented business requirements and supported functional specifications under guidance from senior team members
- Implemented page layouts, validation rules, formula fields, and record types to improve data quality and usability
- Managed profiles, roles, sharing rules, and field-level security to enforce data access and security controls
- Performed data migration, data imports, updates, exports, and backups using Data Loader
- Conducted data cleansing activities including identifying, merging, and removing duplicate records
- Executed data purge and archival activities using Data Loader hard delete functionality when needed
- Implemented roll-up summary fields to calculate metrics from child records to parent records
- Built and maintained standard reports and dashboards based on business requirements
- Supported Agile delivery processes by working with VersionOne to track tasks, updates, and releases
- Assisted with routine Salesforce administration tasks and provided basic user support
