PROFESSIONAL SUMMARY:

Cybersecurity Analyst with 2+ years of experience monitoring enterprise environments, investigating security incidents, and supporting 24x7 Security Operations Center (SOC) functions. Experienced performing SIEM monitoring, alert triage, endpoint investigations, threat hunting, log analysis, incident response, and threat intelligence using Splunk, Microsoft Sentinel, CrowdStrike Falcon, Microsoft Defender, and Active Directory. Skilled at analyzing phishing attacks, malware, suspicious authentication activity, network traffic, and cloud security events across Windows, Linux, and Microsoft Azure environments. Strong understanding of the MITRE ATT&CK Framework, NIST Cybersecurity Framework, TCP/IP networking, and incident response processes. CompTIA Security+, CompTIA CySA+, **Active Secret Clearance**, and passionate about protecting enterprise environments through continuous detection and response.

TECHNICAL SKILLS:

Security Operations:

Security Operations Center (SOC), SIEM Monitoring, Alert Triage, Incident Response, Threat Detection, Endpoint Investigation, Threat Hunting, Log Analysis, Threat Intelligence

Frameworks:

NIST Cybersecurity framework, MITRE ATT&CK, Incident Response, Security Operations

Cloud & Virtualization:

Microsoft Azure, AWS, VirtualBox, Windows Server

Security Analysis:

Log Analysis, Network Traffic Analysis, IOC Analysis, MITRE ATT&CK Mapping, NIST Cybersecurity Framework, Malware Analysis, Security Awareness Training, Vulnerability Management, Security Hardening, Risk Assessment

Vulnerability Management:

Vulnerability Assessment, Risk Assessment, Security Hardening

Networking:

TCP/IP, DNS, DHCP, VPN, Routing, ACLs, Firewalls, Network Troubleshooting

Scripting & Automation:

Python, PowerShell, Bash

TOOLS:

Jira, Microsoft Word, Microsoft PowerPoint, Microsoft Excel, SharePoint, Teams, Zoom

TECHNICAL TOOLS:

Splunk, Elastic Stack, Google Chronicle, Microsoft Sentinel, CrowdStrike Falcon, Microsoft Defender, OpenEDR, Nessus, Greenbone OpenVAS, Wireshark, tcpdump, Suricata, Snort, OPNsense, pfSense, Metasploit Framework, Burp Suite, OWASP ZAP, Arachni, Nikto, Maltego, WHOIS, AbuseIPDB, VirusTotal, Angry IP Scanner, Nmap, MITRE ATT&CK, Linux, Windows, Wazuh, Python, PowerShell, Bash, Bloodhound, Microsoft Azure, AWS, VirtualBox, Windows Server, Active Directory, VMware

EDUCATION:

Associate of Science in Cyber Security LoneStar College, Texas	December-2023
Bachelor of Science in Cyber Security (In Progress) LoneStar College, Texas	Expected- December 2027

CERTIFICATION:

- CompTIA CYSA+
- CompTIA Security +
- CompTIA A+
- CompTIA Security Analytics Professional

Activities and Honors:

- United State Navy | DOD Active security clearance
- United States Navy | Sailor of the month

WORK EXPERIENCE:

HEB San Antonio, TX	
CYBER SECURITY ANALYST	Dec-2024-Present
• Monitored and analyzed 5,000+ daily security events from firewalls, EDR, IDS/IPS, NetFlow, DNS, Windows Event Logs, and cloud environments using Splunk and Microsoft Sentinel to identify suspicious activity and support incident response. • Investigated and triaged 20–30 security alerts daily by validating true positives, determining severity, and escalating confirmed incidents according to established incident response procedures. • Investigated 100+ phishing attempts, malware infections, suspicious authentication activity, and endpoint detections using CrowdStrike Falcon, Microsoft Defender, email analysis, and threat intelligence. • Leveraged VirusTotal, AbuseIPDB, WHOIS, and other threat intelligence sources to validate 500+ indicators of compromise (IOCs) and enrich investigations. • Tuned SIEM correlation rules and IDS/IPS detection signatures, reducing false positives by approximately 30% while improving alert fidelity. • Conducted Windows Security Event Log and Active Directory analysis to identify abnormal authentication activity, privilege escalation attempts, account compromise, and suspicious user behavior. • Investigated network-based threats by analyzing TCP/IP traffic, DNS, NetFlow, firewall logs, and IDS/IPS alerts to identify lateral movement, command-and-control activity, and unauthorized network access. • Monitored and investigated security events across Microsoft Azure resources and cloud authentication logs to support detection of suspicious cloud activity within hybrid environments. • Mapped attacker tactics, techniques, and procedures (TTPs) to the MITRE ATT&CK framework to improve threat detection, investigation consistency, and SOC response capabilities.	

- Collaborated with **10+** security analysts, system administrators, and IT teams to coordinate investigations, remediation efforts, and post-incident improvements.
- Generated **25+** weekly and monthly SOC metrics reports summarizing alert trends, incident activity, detection effectiveness, and operational performance for technical stakeholders.
- Documented and updated **20+** investigation playbooks, standard operating procedures, and incident documentation to improve analyst consistency and response efficiency.
- Produced **300+** incident reports and case notes, clearly communicating technical findings, remediation recommendations, and investigation outcomes to technical and non-technical stakeholders.

RAPID ASCENT | Fredericksburg, VA

SOC ANALYST

May 2023-Dec 2024

- Monitored and investigated **2,500+** daily security events using SIEM platforms to identify suspicious activity across Windows systems, network devices, firewalls, IDS/IPS, and endpoint security tools.
- Performed initial triage of **15–20** security alerts per day by analyzing logs, validating true positives, determining severity, and escalating confirmed security incidents.
- Investigated **75+** phishing emails, malware detections, suspicious authentication events, and endpoint alerts using Windows Event Logs, Active Directory, and threat intelligence sources.
- Analyzed **5,000+** Windows Event Logs, firewall logs, IDS/IPS alerts, DNS activity, and Active Directory events to identify indicators of compromise and suspicious behavior.
- Leveraged VirusTotal, AbuseIPDB, WHOIS, and the MITRE ATT&CK framework to enrich **300+** investigations and improve threat analysis.
- Assisted with vulnerability remediation and security hardening across Windows and Linux systems by validating patches, correcting misconfigurations, and supporting compliance initiatives.
- Supported SIEM detection tuning by refining correlation rules, documenting investigation procedures, and reducing false positives.
- Created **250+** incident reports, investigation summaries, case documentation, and technical reports following established incident response procedures.
- Automated **10+** administrative and security-related tasks using PowerShell to improve operational efficiency and reduce manual effort.
- Collaborated with **15+** analysts, engineers, and IT administrators to investigate security incidents, coordinate remediation efforts, and strengthen overall security operations.

US NAVY | Houston, TX

IT ADMINISTRATOR

Jan 2021 – May 2023

- Provided Tier 1 and Tier 2 IT support for **200+** military and civilian personnel, troubleshooting Windows workstations, Microsoft Office, printers, CAC authentication, and network connectivity issues.
- Resolved **500+** hardware, software, operating system, and user account issues, maintaining high system availability and minimizing operational downtime.
- Administered **Active Directory** user accounts by creating, modifying, disabling, and managing permissions for **300+** user accounts while enforcing least-privilege access principles.
- Diagnosed and resolved **250+** network connectivity issues involving TCP/IP, DNS, DHCP, VPN, Wi-Fi, and secure communications across enterprise environments.
- Supported the deployment, configuration, and maintenance of **150+** Windows endpoints by installing operating systems, security patches, software updates, and enterprise applications.

- Processed and validated **100+** user access requests and account modifications while ensuring compliance with U.S. Navy security policies and access control procedures.
- Performed routine system maintenance, patch management, and endpoint hardening to improve security, stability, and compliance across Windows environments.
- Assisted with cybersecurity initiatives by identifying suspicious activity, escalating potential security incidents, and supporting remediation efforts alongside information assurance personnel.
- Documented **200+** technical support cases, standard operating procedures, and troubleshooting guides to improve knowledge sharing and reduce issue resolution time.
- Collaborated with cross-functional IT teams to maintain secure network operations, improve service reliability, and support mission-critical communications.
- Delivered technical guidance and cybersecurity awareness to **50+** personnel, promoting secure computing practices, phishing awareness, and proper handling of sensitive information.
- Maintained accountability for government IT assets and equipment, supporting inventory management, lifecycle tracking, and compliance with Navy operational standards.
