SUMMARY

Recent M.S. Computer Science graduate with 3+ years of prior professional experience in data analytics, leveraging SQL, Python, and Tableau to analyze large datasets, automate reporting workflows, and deliver actionable business insights. Skilled in dashboard development, data validation, exploratory data analysis (EDA), and cross-functional collaboration within Agile environments.

EDUCATION

M.S. in Computer Science	<i>Florida International University, FL, USA</i>	GPA: 3.77/4	Jan 2024 - Dec 2025
B.E. in Computer Science	<i>BITS (GTU), Gujarat, India</i>	GPA: 3.7/4	June 2013 - May 2017

TECHNICAL SKILLS

Programming Languages	Python, SQL
Database	MySQL, PostgreSQL, Oracle
Data Analysis & Visualization	Pandas, NumPy, Tableau, Plotly, Excel (pivot tables, v-lookups, graphs/charts), Jupyter Notebook, Google Colab
Analytics & Reporting	Data Validation, Exploratory Data Analysis (EDA), KPI Reporting, Dashboard Development, Reporting Automation, ETL Workflows
Big Data & Cloud Tools	Spark, PySpark, Databricks, AWS SageMaker
Machine Learning	Scikit-learn, Regression, Classification, Ensemble Learning
Business & Workflow Tools	Agile/Scrum, Requirements Gathering, Gap Analysis, UAT
Generative AI	LLMs, Prompt Engineering
Other Tools & Concepts	GitHub, SDLC, Object-Oriented Programming (OOP)

WORK EXPERIENCE

Data Analyst, Numerator, Vadodara, India	May 2018 – Jan 2022
- Developed Tableau dashboards and automated SQL/Python reporting pipelines for U.S. and Canada TV network analytics, reducing reporting turnaround time by 60%. - Performed data validation, EDA, and ETL quality checks on large-scale datasets, improving reporting readiness and data quality by 80%. - Collaborated with stakeholders and engineering teams to define requirements and automate reporting workflows, improving analytics delivery efficiency.	

KEY PROJECTS

Fraud Detection Analytics Using Ensemble Learning — Python, Scikit-learn
- Developed an end-to-end fraud detection pipeline using Decision Tree and Random Forest models on imbalanced transaction datasets. - Performed data preprocessing and feature engineering to prepare datasets for model training and performance - Achieved an F1-score of 0.98 and a recall of 0.96 while minimizing false negatives. - Evaluated model performance using ROC-AUC and Precision–Recall curves to support evaluation.
Predictive Quality Control Analytics & Reporting — Python, Scikit-learn
- Developed models like linear, multivariate, and polynomial regression to analyze relationships between wine attributes and quality scores - Conducted EDA and data preprocessing (missing values, outliers, duplicates, normalization) to improve data reliability and model robustness. - Evaluated model performance using MSE, with a quadratic regression model delivering the best generalization.
HONORS & ACHIEVEMENTS

- Numerator:** Outstanding Employee Rating for two consecutive years (2020 and 2021)
- Numerator:** Star Performance Award for three consecutive years (2019, 2020, and 2021)
