

NIVED KUMAR DAMMALAPATI

SENIOR DATA ANALYST | BUSINESS INTELLIGENCE | SQL | POWER BI | PYTHON

Delray Beach, FL | +1 561-809-7542 | nivedkumard2000@gmail.com | [LinkedIn](#)

Professional Summary:

Data Analyst with **4+ years of experience** working with business data, reporting and analytics. Strong hands-on experience with **SQL, Python, Power BI, Tableau and Microsoft Excel**, with a focus on data analysis, dashboard development, KPI reporting, data validation and reporting automation.

Experienced in working with large datasets from multiple sources, writing **complex SQL queries**, cleaning and transforming data, investigating discrepancies and building reliable datasets for analysis and reporting. Develop dashboards and reports that help teams monitor **KPIs, trends, performance, revenue, operational metrics and business results**.

Works closely with business and technical stakeholders to understand requirements, define metrics, answer ad hoc business questions and turn analysis into practical recommendations. Comfortable taking ownership of analytical work from **data extraction and preparation through analysis, validation, visualization and presentation**.

Strong foundation in **data warehousing, data modeling, ETL, statistical analysis, predictive analytics, and machine learning**, supported by a **Master's degree in Data Science**. Known for being detail-oriented with a practical approach to solving data problems and communicating results clearly to both technical and non-technical teams.

Technical Skills:

Data Analysis & Business Intelligence: Data Analysis, Business Intelligence, Business Analytics, KPI Development, Performance Analysis, Ad Hoc Analysis, Trend Analysis, Variance Analysis, Root Cause Analysis, Data-Driven Decision Making

SQL & Databases: SQL, Advanced SQL, Complex Queries, CTEs, Window Functions, Subqueries, Joins, Aggregations, Stored Procedures, Views, Data Extraction, Data Transformation, Data Validation, Query Optimization, Relational Databases

Programming & Analytics: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Statistical Analysis, Exploratory Data Analysis, Predictive Analytics, Regression Analysis, Forecasting, Machine Learning

Business Intelligence & Visualization: Power BI, Tableau, Dashboard Development, Interactive Dashboards, KPI Dashboards, Data Visualization, Power Query, DAX, Calculated Measures, Drill-Down Reporting, Executive Reporting

Data Engineering & Warehousing: Data Warehousing, Data Modeling, Dimensional Modeling, ETL, ELT, Data Integration, Data Pipelines, Data Transformation, Data Quality, Data Cleansing, Data Reconciliation, Data Validation

Microsoft Excel & Reporting: Advanced Excel, PivotTables, Power Query, XLOOKUP, VLOOKUP, INDEX-MATCH, SUMIFS, Conditional Logic, Data Validation, Charts, Financial Analysis, Reporting Automation

Business & Stakeholder Skills: Requirements Gathering, KPI Definition, Stakeholder Management, Cross-Functional Collaboration, Business Requirements Analysis, Process Improvement, Documentation, Presentation, Data Storytelling

Analytics & Reporting: Recurring Reporting, Ad Hoc Reporting, Executive Dashboards, Operational Reporting, Financial Reporting, Performance Metrics, Data Quality Controls, Reporting Automation

Tools & Platforms: Jupyter Notebook, Google Colab, PyCharm, Git/GitHub, Microsoft Office, PowerPoint, Word

PROFESSIONAL EXPERIENCE:

Advanced Data Analyst

Elite Core Systems, USA

May 2026 – Present

- Own end-to-end analytical projects, from gathering business requirements and identifying data sources to developing analysis, validating results, and presenting findings to stakeholders.
- Write advanced **SQL** using CTEs, window functions, nested queries, complex joins, aggregations, temporary tables, and conditional logic to analyze large datasets and build reusable reporting datasets.
- Design and maintain analytical data models that support **Power BI, Tableau, recurring reporting, and ad hoc analysis**, with a focus on performance, scalability, and consistent business definitions.
- Build and maintain executive and operational dashboards in **Power BI and Tableau**, combining multiple data sources to provide a clear view of KPIs, trends, performance, and business drivers.
- Develop **DAX measures, calculated columns, time-intelligence calculations, filters, drill-throughs, and data models** for interactive Power BI reporting.
- Analyze large datasets to identify trends, anomalies, performance gaps, relationships, and root causes, then translate findings into practical recommendations for business teams.
- Partner with Finance, Operations, Sales, Marketing, Product, and Technology teams to define KPIs, establish reporting requirements, and determine the appropriate analytical approach.
- Lead data validation and reconciliation activities by comparing source-system data with analytical outputs and investigating differences at the record and aggregate levels.
- Establish data-quality checks for completeness, accuracy, consistency, duplicates, missing values, unexpected changes, and reporting exceptions.
- Develop automated data-processing and reporting workflows using **Python, Pandas, SQL, and Power Query**, reducing repetitive manual analysis and improving reporting consistency.
- Optimize SQL queries and reporting datasets by reviewing execution logic, reducing unnecessary transformations, and restructuring calculations where appropriate.
- Perform recurring and ad hoc analysis involving **KPI performance, revenue, customer behavior, operational metrics, financial results, and business trends**.
- Develop analytical frameworks for measuring performance against targets, comparing period-over-period results, and identifying the factors contributing to significant changes.
- Create reusable reporting templates, standardized KPI definitions, and documented analytical processes to improve consistency across teams.
- Work with technical teams to troubleshoot data pipeline, database, integration, and reporting issues and verify fixes before production reporting is updated.
- Translate technical findings into clear business language and present recommendations to both technical and non-technical stakeholders.
- Review existing dashboards and reports to identify outdated calculations, duplicated logic, inefficient queries, and opportunities to improve usability and performance.
- Maintain detailed documentation covering data sources, SQL logic, business rules, KPI definitions, transformation processes, dashboard calculations, and validation procedures.
- Manage multiple analytical projects and recurring reporting responsibilities while coordinating priorities, dependencies, deadlines, and stakeholder expectations.

Lead Business Intelligence Analyst
Community Dreams Foundation, USA
Sept 2025 – May 2026

- Lead the development and delivery of business intelligence solutions that give leadership and business teams a consistent view of KPIs, financial performance, operational metrics, customer trends, and business results.
- Partner with business leaders and subject-matter experts to understand reporting needs, define measurable KPIs, and convert business questions into scalable BI solutions.
- Develop advanced SQL queries using CTEs, window functions, subqueries, complex joins, aggregations, and conditional logic to prepare and analyze data from multiple sources.
- Design and maintain Power BI and Tableau dashboards that combine data from different systems and provide interactive views for management and operational teams.
- Build and maintain Power BI data models, relationships, calculated measures, DAX logic, filters, drill-throughs, and time-based calculations to support self-service reporting.
- Establish consistent definitions for KPIs and reporting metrics, reducing differences between reports and improving confidence in business reporting.
- Review analytical requirements, data availability, source-system limitations, and reporting logic before development to ensure BI solutions address the actual business need.
- Lead data-quality and reconciliation activities by validating source data, investigating discrepancies, and confirming dashboard results before reports are distributed.
- Work closely with Data Engineering and IT teams to troubleshoot data pipelines, database issues, ETL processes, integration problems, and reporting failures.
- Analyze business performance across multiple dimensions, including time period, product, customer, region, channel, and operational segment, to identify trends and areas for improvement.
- Develop recurring executive reports and ad hoc analyses that explain performance changes, emerging trends, and potential business risks or opportunities.
- Automate manual reporting processes using SQL, Python, Power Query, and Power BI, improving reporting consistency and reducing time spent on repetitive data preparation.
- Establish reporting standards covering dashboard design, KPI calculations, data validation, documentation, naming conventions, and report maintenance.
- Conduct dashboard performance reviews and improve inefficient queries, data models, calculations, and visualizations where necessary.
- Create documentation for data sources, business rules, SQL logic, KPI definitions, data models, dashboard calculations, and reporting procedures.
- Coordinate multiple BI requests and prioritize deliverables based on business impact, reporting deadlines, data availability, and stakeholder requirements.
- Present analytical findings and dashboard results to technical and non-technical audiences, explaining the numbers in clear business terms.
- Support and guide analysts on SQL development, dashboard design, data validation, analytical approaches, and reporting best practices.
- Review completed analytical work for accuracy, consistency, usability, and alignment with agreed business requirements before delivery.
- Identify opportunities to improve existing reporting processes and replace fragmented spreadsheets with centralized, automated BI solutions.
- Maintain strong working relationships with Finance, Operations, Sales, Marketing, Product, Customer Success, and Technology teams to ensure reporting remains aligned with changing business needs.

Data Operations Analyst

Edu Vance, India

Feb 2020 – Aug 2023

- Managed and analyzed operational data from multiple sources using SQL, Excel, and Python, ensuring data accuracy, completeness, and consistency across business systems.
- Developed and maintained data validation and quality-control processes to identify duplicates, missing values, inconsistencies, and data integrity issues.
- Created and optimized SQL queries to extract, transform, and reconcile large datasets for operational reporting and business analysis.
- Automated recurring data-processing and reporting tasks using Python and Excel, reducing manual effort and improving reporting efficiency.
- Built and maintained Power BI dashboards and reports to monitor key operational metrics, data quality, productivity, and performance trends.
- Performed data cleansing, transformation, and reconciliation to prepare datasets for reporting, analytics, and downstream business processes.
- Investigated data discrepancies and worked with cross-functional teams to identify root causes and implement corrective actions.
- Monitored daily data operations and proactively resolved issues related to data availability, accuracy, and processing workflows.
- Prepared recurring daily, weekly, and monthly operational reports and communicated key findings to stakeholders.
- Documented data processes, business rules, validation procedures, and reporting requirements to improve operational consistency.
- Collaborated with business, technical, and operations teams to support data integration, process improvements, and reporting requirements.
- Used analytical techniques to identify trends, operational bottlenecks, and opportunities to improve data processes and overall business performance.

Education:

Master's degree in data science

Florida Atlantic University

GPA: 3.7

Bachelor's Degree in ECE

Vidya Jyothi Institute of Technology

GPA: 3.4
