

Training & Certifications

- CompTIA **Security+**
- TryHackMe **SOC Level 1**
- **DataCom Cyber Security Operations Job Simulation** on Forge
- AWS Certified **Cloud Practitioner**
- Google **Cybersecurity Certificate**

Skills

Security: SOC Ops, SIEM, Log Analysis, Threat Hunting, Incident Response, Malware Forensics, Network Security

EDR / XDR: Microsoft Defender for Endpoint, Microsoft 365 Defender

Frameworks: MITRE ATT&CK, NIST CSF, CIS Controls, CVSS, CVE Program

Tools: Microsoft Sentinel, Splunk, ELK, Wazuh, Wireshark, Zeek, Snort, Sysmon, Osquery, Volatility, VMware, PuTTY, Kali, Ubuntu

Programming: Python, C++, KQL, HTML/CSS/JS, SQL, AWS (IAM, EC2, S3, CloudTrail), OpenCV, Pandas

Projects

Azure Sentinel SOC Honeypot Lab | *Azure VM, MS Sentinel, Log Analytics, KQL, GeoIP Watchlist* May 2026 – Jun 2026

- Built a SOC-focused Microsoft Sentinel honeypot lab using an Azure Windows VM to simulate brute-force login activity and practice SIEM investigation workflows.
- Intentionally exposed inbound access through Network Security Group rules and configured Azure Monitor Agent with Data Collection Rules to forward Windows Security Event logs into Log Analytics Workspace.
- Investigated Event ID 4625 failed logons using KQL, analyzing attacker IPs, attempted usernames, timestamps, authentication patterns, and source activity trends.
- Enriched attacker IP addresses with GeoIP watchlist data and visualized attack origins through a custom Microsoft Sentinel Workbook to support incident review and reporting.

Log and Domain Intelligence Analysis | *Python, pandas, CSV, Jupyter Notebook* Aug 2025 – Oct 2025

- Correlated access logs with HR and organizational datasets to identify cross-department access patterns, policy violations, and unauthorized access attempts.
- Analyzed the Top 1 Million Domains dataset to identify low-frequency domains, suspicious domain patterns, and potential indicators of malicious infrastructure.
- Automated log parsing and anomaly detection using Python and pandas, improving SOC-style investigation workflows for domain intelligence and access-log review.

Insider Threat Forensic Investigation | *FTK Imager, Autopsy, Registry Explorer, Netcat* Jan 2025 – Apr 2025

- Investigated a simulated insider-threat scenario involving USB malware execution and Netcat reverse-shell activity by analyzing Windows event logs, registry artifacts, and forensic evidence.
- Acquired and verified disk images using FTK Imager; examined deleted files, service creation artifacts, USB history, and persistence indicators in Autopsy and Registry Explorer.
- Correlated malicious scripts, removable-media events, PowerShell traces, and reverse-shell indicators to reconstruct attacker behavior and document findings for incident reporting.

Experience

Cyber Security Intern | **PROJXON (JBMP Consulting LLC)** Jul 2026 – Present

- Joined a remote security operations team responsible for monitoring network systems, servers, and endpoints and escalating suspected security events under a defined incident-response process.
- Completed security onboarding covering the team's monitoring workflow, escalation paths, and internal security procedures.

SOC Analyst Practical Training | **TryHackMe SOC Level 1** Aug 2024 – Jun 2026

- Completed practical SOC operations training across simulated enterprise environments, covering alert triage, threat hunting, incident response, digital forensics, and IOC extraction.
- Investigated security events using Splunk, ELK, and Wazuh by correlating endpoint, authentication, process, and network logs to identify suspicious activity and indicators of compromise.
- Performed network and endpoint investigations using Wireshark, Zeek, Snort, Sysmon, Osquery, Velociraptor, and Volatility to detect intrusions, persistence mechanisms, and malware behavior.
- Built and tuned YARA and Snort rules; used MISP, OpenCTI, PhishTool, VirusTotal, and CyberChef to analyze threats, extract IOCs, and document investigation findings.

Graduate Information Security Assistant | **UNC Charlotte** Sept 2025 – May 2026

- Supported 60+ students across core information security topics: CIA Triad, cryptography, hashing, brute-force attacks, OWASP Top 10, access control, and secure authentication concepts.
- Guided hands-on security labs (packet analysis, Windows XP password cracking, SQL injection, XSS, access-control testing) and, from Jan 2026, malware analysis labs covering static/dynamic analysis, persistence mechanisms, and evasion techniques.
- Assisted an 80-student Operating Systems & Networking course on processes, scheduling, memory management, IPC, TCP/UDP, HTTP, and routing, reinforcing fundamentals relevant to traffic analysis and incident investigation.
- Held weekly office hours and in-class support, troubleshooting labs, networking concepts, and application-layer communication issues for students.

Education

UNC Charlotte | *Masters in Cybersecurity* Aug 2024 – May 2026

MIT ADT University, Pune | *B.E. Computer Science (Network & Security)* Sep 2020 – Jun 2024
