SUMMARY

Software Engineer with 3+ years of experience designing scalable full-stack systems and translating complex requirements into measurable outcomes. Specializes in building high-performance architectures, automating workflows, and integrating intelligent solutions that reduce latency, accelerate delivery cycles, and drive demonstrable efficiency gains across cross-functional teams.

SKILLS

Methodologies: Agile, SDLC, Microservices Architecture, System Design

Languages: Python, Java, TypeScript, JavaScript, SQL

AI & Machine Learning: LangChain, LangGraph, LlamaIndex, RAG Pipelines, Agentic Workflows, Prompt Engineering, TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas

Frontend Development: React, Angular, HTML5, CSS3, Bootstrap

Backend Development: Node.js, Express.js, Spring Boot, Django, Flask, FastAPI, RESTful APIs, GraphQL

Databases: PostgreSQL, MySQL, MongoDB, Redis, Snowflake

Cloud & Infrastructure: AWS (EC2, S3, Lambda, RDS, Redshift, ELB), Microsoft Azure Terraform

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, Apache Airflow, MLOps

Testing & Version Control: Git, GitHub, JUnit, Postman, Unit Testing

Soft Skills: Problem-Solving, Communication Skills, Team Collaboration, Critical Thinking, Adaptability

WORK EXPERIENCE

Software Engineer | BNY, New Jersey

January 2025 – Current

- Developed a full-stack financial trading platform using **React**, **Redux**, and **TypeScript** on the frontend with **Java Spring Boot** on the backend, decomposing a monolithic codebase into microservices and reducing inter-service dependencies by 30%.
- Engineered reusable, responsive UI components and integrated **GraphQL** APIs served via a **Spring Boot** and **PostgreSQL** backend, cutting transaction processing time by 40%.
- Built an AI-powered **RAG Pipeline** using **LangChain**, **LangGraph**, and **LlamaIndex**, enabling analysts to query financial reports and trade data in plain English, replacing manual document review with automated workflows.
- Automated CI/CD pipelines using **Jenkins** and **Docker**, managing version control with **Git** and **GitHub** and deploying containerized applications to **AWS EC2**, reducing deployment time from approximately 2 hours to 25 minutes.
- Optimized **PostgreSQL** query execution plans and used **Redis** caching to reduce API response latency by 50% under high-volume trading loads; integrated **TensorFlow** and **Scikit-learn** based models for risk scoring and anomaly detection, improving fraud detection accuracy.

Software Engineer | Citus Infotech, India

January 2021 – March 2023

- Developed responsive web applications using **React (TypeScript)** and **Spring Boot**, implementing modular e-commerce platform features with **Redux** state management to enhance user engagement and application performance.
- Designed secure authentication systems utilizing **Node.js** and **Express.js**, implementing role-based access control and deploying services on **AWS EC2** to strengthen application security and access management.
- Created interactive data visualization dashboards using **MongoDB** aggregation framework and **Node.js**, optimizing **MongoDB** database queries to reduce report generation time by 35% and facilitate real-time data communication.
- Implemented microservices architecture using **Docker** and **Kubernetes**, streamlining deployment processes through **GitHub Actions** and collaborating with cross-functional teams to improve continuous integration workflows.
- Integrated third-party **APIs** and payment processing systems using **RESTful** services, implementing error handling and request validation middleware to ensure data integrity and enhance application reliability across multiple service endpoints.

ACADEMIC PROJECTS

DishWise, (core skills: Node.js, React.js, MongoDB, Google Maps API, Redis, AWS):

Created a backend system for a food discovery platform using Node.js, enabling real-time data processing and concurrent user requests. Integrated Google Maps API for location-based search and AWS S3 for media storage, supporting efficient handling of user data. Improved query performance using MongoDB indexing and Redis caching, reducing database load by 30% and achieving faster response times during testing.

Soma.ai, (core skills: React, Node, Express, MongoDB, OpenAI API, distilBERT):

Designed an LLM-powered conversational system using OpenAI APIs and distilBERT, enabling context-aware responses for user interactions. Developed Node.js backend services to manage prompt pipelines and handle concurrent user requests, enabling efficient retrieval of responses during real-time user interactions. Designed an interactive TypeScript frontend with dynamic chat UI and personalized response flows based on user input, improving user engagement.

Vogue Mind, (core skills: Node.js, React, Python, Google Cloud Vision):

An AI-powered fashion assistant that recommends outfits based on wardrobe and weather data. It leverages ML for garment classification and personalized styling suggestions.

EDUCATION

Master of Science in Computer Science | Pace University, Seidenberg School of Computer Science & Information Systems

May 2025

Bachelor of Engineering in Computer Engineering | L.J. Institute of Engineering & Technology, India

July 2021

CERTIFICATIONS

AWS Certified Cloud Practitioner
