Professional Experience

Inflexion Point — Software Developer

2023–Present

- Develop and maintain Manufacturing Execution System (MES) applications and industrial software solutions using Ignition, TrakSYS, C#, SQL Server, ASP.NET, JavaScript, Python, and Jython in enterprise manufacturing environments.
- Build backend integrations and APIs for processing and exchanging real-time manufacturing data using JSON, XML, REST, and IDOC-based workflows.
- Develop SQL Server queries, stored procedures, and operational reporting systems supporting live production environments, manufacturing workflows, auditing, and data visualization.
- Troubleshoot production system issues involving MES applications, manufacturing databases, enterprise integrations, and operational reliability across active manufacturing facilities.
- Design and maintain web-based MES interfaces and dashboards integrating live operational, production, and process data.
- Support manufacturing automation initiatives through integration of MES platforms, databases, enterprise systems, and industrial software workflows.
- Collaborate with cross-functional and international engineering teams on manufacturing software deployments and operational initiatives, including implementation support at a Kenvue (Johnson & Johnson) manufacturing facility in Brazil.
- Work directly with live production systems where reliability, data integrity, and operational continuity are critical.

- Ported working full stack C# application to Ignition by inductive automation. Cut execution time nearly in half with frontend listeners and enhanced UI workflow
-

Education

University of Michigan – Ann Arbor

Bachelor of Science in Computer Science & German
2019–2023

- University Honors — December 2020
-

Technical Skills

Languages: Python, Jython, C#, SQL, JavaScript, Java, C++

Backend & APIs: FastAPI, ASP.NET, REST APIs, JSON/XML Processing

Databases: SQL Server, SSMS

Frontend & Web: ReactJS, HTML/CSS, JavaScript

Tools & DevOps: Docker, Git, GitHub

Industrial & Enterprise Systems: TrakSYS MES, Ignition, Manufacturing Execution Systems (MES), Industrial Automation Systems

Other: Fluent in German, Experience collaborating with international teams

Projects

AI Neural Network Pong Player

- Developed a machine-learning-based Pong AI using Python, Pygame, and the NEAT algorithm to evolve autonomous agents over multiple training generations.

Activity Finder Web Application

- Built a full-stack web application using React, Node.js, and Google Maps API to help users discover activities and connect through shared interests.
 - Collaborated within a four-person development team on application architecture, feature implementation, and deployment coordination.
-

Athletics

Competitive Soccer

- Crew MLS Academy Player (2014–2017)
- Real Madrid Trial Participant
- USYS National Finalist (2019)
- Two-Time State Cup Champion (2018, 2019)
- First Team All-State MHSSCA (2019)
