Cleveland, OH | +1 (216) 456-1246 | prahasyaaroo@gmail.com | [linkedin.com/in/prahasyaa-lokineni](https://www.linkedin.com/in/prahasyaa-lokineni)

PROFESSIONAL SUMMARY

Data and business analytics professional with 3+ years building SQL-driven data models, Power BI dashboards, and Python/ETL pipelines across FinTech, enterprise, and healthcare domains. Skilled at translating stakeholder requirements into scalable reporting solutions and delivering measurable gains in operational efficiency, customer retention, and pipeline visibility. Currently contributing to cloud-native regulatory surveillance systems on AWS with PostgreSQL, FastAPI, and React.

CORE COMPETENCIES

Languages & Query: SQL (T-SQL, PL/SQL), Python (Pandas, NumPy), DAX, M / Power Query, HTML, CSS, C, C++

BI & Visualization: Power BI, Tableau, Excel (Pivot Tables, VLOOKUP, Macros), SSRS, Power BI Service, Dataflows, KPI Dashboards, Data Storytelling

Databases: SQL Server, PostgreSQL, Oracle, MySQL, MongoDB, Dataverse, NoSQL

Cloud & Data Platforms: Azure (Data Factory, Logic Apps, Analysis Services), AWS (ECS, RDS, S3, CloudFront), Databricks, Snowflake

ETL & Automation: ETL / ELT, SQLAlchemy, Alembic, Power Automate, Azure Logic Apps, REST APIs, Data Pipelines, Star Schema, Data Modeling

Frameworks & Tools: FastAPI, React, Git / GitHub, Jira, Agile / Scrum, VS Code, MATLAB

CRM & Business: Dynamics 365, Dataverse, Lead Qualification, Pipeline Management, Requirements Gathering (BRD / FRD), UAT, Stakeholder Management

PROFESSIONAL EXPERIENCE

RegEdge, United States

Jun 2026 – Present

Software Engineer

- Configured 7 market-manipulation detection scenarios end-to-end for an AI Surveillance platform, including detection logic, alert workflow, UI, and real-time market and news data integration via TwelveData and Finnhub APIs.
- Designed and documented a normalized PostgreSQL schema (orders, trades, NBBO, alerts, accounts, traders), enabling migration from a single-file prototype to a scalable multi-scenario backend serving compliance analysts.
- Modeled order- and trade-level simulations at the market microstructure level to generate realistic alert data, accelerating detection tuning and QA cycles.
- Contributed to re-architecting the platform into a FastAPI backend, React frontend, and PostgreSQL database deployed on AWS (ECS, RDS, CloudFront) with Alembic-managed schema migrations.
- Standardized the analyst alert-disposition workflow into a repeatable checklist with embedded charts, reducing manual write-up time and improving audit-ready review consistency.
- Authored technical documentation covering detection logic, data requirements, risk indicators, and threshold reasoning to support client onboarding and regulatory audit defense.
- Supported a secondary E-Comm Surveillance AI tool by generating LLM-simulated training phrases across 4 misconduct scenarios.

Tools: Python, FastAPI, React, PostgreSQL, SQLAlchemy, Alembic, AWS (ECS, RDS, CloudFront), REST APIs (TwelveData, Finnhub, EDGAR), Git

Inedge Technologies, United States

Aug 2025 – May 2026

Business Analyst

- Designed and maintained scalable data models (star schema, relational) supporting enterprise analytics and executive reporting across sales, marketing, and operations functions.
- Built and optimized ETL pipelines to transform raw source data into clean, analysis-ready datasets in SQL Server and Dataverse.
- Developed interactive Power BI dashboards and KPI reports using DAX and Power Query, enabling leadership to track pipeline, revenue, and campaign performance in real time.

- Analyzed lead, account, and engagement data in CRM platforms to prioritize outreach, track pipeline progression, and improve lead-to-opportunity conversion.
- Conducted market and account research to identify organizations aligned with target solutions, contributing to a measurable increase in qualified pipeline.
- Partnered with sales and marketing teams to translate campaign activity into pipeline attribution and actionable insights.
- Automated recurring reporting workflows using Power Automate and Azure Logic Apps, reducing manual effort by 40%.
- Delivered executive-level insights supporting strategic planning, forecasting, and performance improvement.

Tools: *SQL, Power BI, DAX, Power Query, Python, Excel, SQL Server, Dataverse, Azure, ETL, Data Modeling*

Xlysi Technologies Pvt Ltd, Hyderabad, India

Apr 2022 – Jun 2023

Software Engineer

- Designed and delivered interactive dashboards and KPI reports in Power BI and Tableau for cross-functional performance tracking.
- Structured enterprise data into analytics-ready datasets and star-schema models supporting business, sales, and marketing teams.
- Performed data analysis and forecasting using SQL, Python, and DAX to identify trends and guide decision-making.
- Applied lead qualification criteria in CRM systems to progress inbound and outbound leads to sales-ready opportunities.
- Automated recurring workflows and reporting processes, delivering real-time insights and monitoring to business stakeholders.
- Partnered with business stakeholders on account research, stakeholder identification, and data-driven customer engagement strategies.
- Enforced data accuracy through validation, governance, and quality checks across reporting layers.

Tools: *SQL, Power BI, Tableau, Python, DAX, Power Query, Excel, SQL Server*

PROJECTS

Healthcare Data Analytics and Reporting System — *Power BI, SQL, Python, Excel, Power Query*

Built an end-to-end analytics solution to monitor patient outcomes, cost efficiency, and hospital operational performance. Designed interactive dashboards tracking admissions, treatment outcomes, and physician KPIs, delivering insights that supported data-driven improvements in resource utilization and care quality.

Customer Churn Prediction and Retention Dashboard — *Power BI, Python, SQL Server, DAX, Power Query*

Combined transactional and behavioral data into a unified Power BI model and applied Logistic Regression and Random Forest models in Python for churn prediction. Visualized churn risk, customer segmentation, and retention KPIs, helping business teams improve retention rate by 20%.

Supply Chain Optimization Dashboard — *Power BI, Power Automate, Dynamics 365, SQL, Dataverse*

Integrated Dynamics 365, Excel, and Dataverse data into a consolidated Power BI model tracking supplier performance, order cycle time, and logistics KPIs. Automated refresh and notifications via Power Automate, cutting manual follow-ups by 40% and improving supply chain visibility by 25%.

EDUCATION

Master of Science in Information Technology

CGPA: 3.3 / 4.0

Cleveland State University, Cleveland, OH
