Professional Summary

- An Information Technology Professional with more than 13 years of experience in working as a **Core Java Developer, QA Engineer Lead/Analyst, 5 years as a Business Analyst** in agile project teams or development environment for clients from PLM, Healthcare domains and Product Development/Management.
 - **CertifiedScrumMaster** professional with experience working as a **Scrum Master** for the product development teams to deliver an enterprise application solutions for PLM Clients.
 - Knowledge of Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC) with experience in software designing, implementation and testing.
 - Experienced in **Unit Testing, Regression Testing, Functional Testing of API (SOAP and REST) using SoapUI and Postman, UAT, Automation Testing using Selenium** in agile projects.
 - Experience in creating detailed use case documents and user stories adhering to the industry or company adapted best practices. Experienced in creating detailed test cases and test execution in JIRA or Excel documents.
 - Experienced in designing architecture and development of an application, automation framework and integration solutions/frameworks for products/service-based solutions.
 - Adept in business requirement understanding, gap & impact analysis, and translating them into test cases and test plans for manual and automation testing. Experience in Unit testing, Integration testing and UAT testing, regression testing.
 - Experience working with SQL database queries for testing and development of applications.
 - Experienced in planning QA exit activities for the product or application release.
 - Experienced working in tools like JIRA, GIT repository with knowledge of CI/CD processes.
 - Capable leader with experience organizing and coaching project teams that produce quality solutions on time. Have performed multiple roles in the team when required and have led cross function onsite and offshore teams including business analysts, developers, QA and support team. Thorough professional with strong communication and organization skills.
-

Skills and Tools

- Core java development, Manual testing applications and web services, automation testing using Selenium framework, Functional/API testing (REST and SOAP), Regression Testing, Unit Testing, UAT, Business Analysis, Scrum Master.
 - PLM Tools: Teamcenter Unified, Windchill, Enovia, xPDMGateway
 - Programming Languages: Core Java
 - Database: SQL
 - Web Servers: Tomcat, WebLogic, JBoss
 - Tools: Atlassian-JIRA, GIT, Postman, SOAP UI
-

Professional Experience

➤ **Java-Developer/Technical-QA Lead/BusinessAnalyst – HCL Technologies 05/2010 to 11/2020**

Worked on various projects in product team at HCL Technologies and have performed developer as well as QA(manual/automation) role in the team. Worked as functional consultant/business analyst for digital transformation centered around product/solution for multiple clients. Elicited detailed functional requirements, facilitated prioritization meetings, lead training for product or integration solution and helped define migration strategy & future state business processes. Implemented an integrated technology platform that increases operational efficiency, brand consistency and agility in customer interactions. The list of projects/solutions is as enlisted below:

- ECCO Digital Thread
- V6 xPDM Adapter for Teamcenter
- Geometric EDGE
- Interop- An Teamcenter-V6 Integration program
- Windchill JCA/WBI Adapter

Roles and Responsibilities:

- Discovery phase requirement gathering. Conducting client interviews. Creating requirement documents.
- Design, implementing and testing applications and web services implemented in the integration solution.
- Creating test plans and test cases for manual/automation testing for the applications along with test data creation and maintenance.
- Performed database testing by running SQL queries. Analyzed and manipulated data wherever required.
- Make sure system is tested end to end before new feature/defect fix release against any regressions for previous requirements. Run SQL queries to validate data outputs and make necessary changes in the test data.
- Responsible for deployment and configuration of product packages in various environments and report any changes to be done to the product documentation.
- Responsible in design of in-house automation framework using java required for automated testing of the applications to adhere to CI/CD process. Created some automation test cases using selenium framework.
- Responsible for final QA sign off for customer delivery Go or no Go.
- Conducted product and solution trainings for stake holders in the team.
- Created use case documents and presentations for client demo for final requirement gathering phase.
- Performed **Scrum Master and Business Analyst** role. Coordinated with the development and business teams to deliver solution to the client in agile development environment. Responsible to arrange scrum ceremonies for the team and trained the team to work in agile mode.
- Responsible for identifying user stories for QA team to test the user stories delivered by development team.
- Responsible for peer code reviews, creating user stories for the team and tracking testing activities in JIRA with.
- Performed API testing using POSTMAN. Also tested already existing SOAP and REST web service applications by analyzing returned JSON outputs.

➤ **Senior Quality Assurance Developer/BusinessAnalyst – OpenText Corporation 11/2020 to 01/2022**

Worked on manual/automation QE activities for new features in the product team at Opentext Corporation.

Roles and Responsibilities:

- Manually verify new feature development delivered in the team. Report bugs/enhancements identified and track the same in JIRA.
- Perform sanity testing and regression testing to make sure previous requirements are not affected by new implementation. Report defects wherever applicable.
- Creating test plans and test cases for manual/automation testing for the new features stories planned for the team for sprint.
- Developing automation testing scripts for the web-based solution in java based selenium. Automate test cases for new features and maintain automation for already automated test cases.
- Maintain history of changes done in the functionality of any product or applications and make sure system is tested against any regressions for previous requirements.
- Connecting with stake holders to understand product framework and suggest changes or improvisation in the QA or development processes.
- Connecting with product owner to understand the requirement and document the same to be shared in the team. Part of UAT team to make sure requirements are according to the business needs.
- Create wireframes for UI changes in the client's existing web pages.
- Responsible for deployment and configuration of products and report any changes to be done to the product documentation. Responsible for upgrades of all the testing environments with documentation maintained for other QEs in the team.
- Make sure system is tested end to end during sanity testing for new features. Run/Create/Update SQL queries for data validation and manipulate data according to the requirement.
- Responsible in design of automation framework required for automated testing of the applications to adhere to CI/CD process.
- Responsible for identifying UAT test scenarios and derive test cases from the same.

➤ **QA Lead/BusinessAnalyst- Tata Consultancy Services**

01/2022 to 04/2025

- Worked on manual/automation QE activities for existing or new features implemented for a leading healthcare client.
- Identify test cases for the User Stories to be delivered in the assignment and making sure they are tested as per quality standards before release.
- Participated in project planning and execution of internal product from inception to delivery ensuring that the delivered product is as per client and company standards.
- Handled multiple teams and stakeholders and make sure that business requirements are communicated effectively. Also participated in UAT.

Certification / Education

- | | |
|---|------------------------|
| ➤ Certified Scrum Master, Scrum Alliance | valid:2025-2027 |
| ➤ Masters of Science (MS) Software Systems, Birla Institute of Technology, Pilani, INDIA | 2011-2013 |
| ➤ Bachelor of Engineering (BE), Computer Science, Amravati University, INDIA | 2005-2009 |
-

Work Authorization

- **Canada Visa status- Canada Permanent Resident**
- **USA Visa Status: B1/B2, H4 EAD (Approved till 5-May-2027)**
- **Nationality - India**
