

EXPERIENCE

eBay

TX, USA

Software Engineer

March 2025 – Present

- Reduced CI/CD build time by 83% by parallelizing test suites, removing flaky tests, and integrating dynamic, data-driven workflows enhancing developer velocity and release cadence.
- Engineered a secure, high-throughput batch processing system using Spring Batch, enabling safe handling of sensitive data at scale for internal operations.
- Refactored batch pipelines to efficiently process large datasets in chunks, improving throughput by 90%.
- Boosted code reliability by achieving 80% test coverage with robust JUnit and Mockito testing, significantly decreasing production-level defects.
- Orchestrated a connector using Apache Kafka and Apache Flink to get the information from a specific source to Argus sink.

Syracuse University

NY, USA

Software Engineer

July 2024 – February 2025

- Developed 4 resilient microservices with Java Spring Boot, MongoDB, and MySQL integrated Kafka for async messaging, reducing latency by 40% during peak usage.
- Built a centralized API Gateway using Spring Cloud for unified request routing, improving system observability and performance.

iConsult Collaborative

NY, USA

Software Engineer

August 2023 – July 2024

- Designed and deployed a React.js-based education platform, increasing engagement by 35% and reducing page loads by 40% via component reusability and React Context optimization.
- Integrated Google Gemini AI into backend pipelines, reducing external API latency by 25%, and supporting ML-based user personalization.

Neosoft Technologies

Remote, IN

Software Engineer

June 2021 - July 2022

- Created modular boilerplates for Node.js and Nest.js using TypeScript, integrating components like Express.js for request-response handling, MySQL, MongoDB, and Passport.js for authentication which streamlined the development processes and improved code maintainability.
- Enhanced developer productivity by 40% and ensured best practices by incorporating Nginx for reverse proxy and standardized boilerplate solutions.
- Enhanced server-side response time by 10% and reduced database read redundancy by 30%, by engineering and maintaining networking components using Node.js, integrating Redis caching for optimal database performance.
- Engineered a scalable multi-tenant architecture to seamlessly onboard and manage 4+ acquired tenants, enabling secure data isolation, tenant-specific configurations, and enhancing system scalability by 40%.

Sankalp Engineers

Remote, IN

Software Engineer

June 2020 – June 2021

- Engineered a React.js and Firebase full-stack application automating labor attendance tracking and payroll processing for 50+ workers across 5+ construction sites, reducing monthly calculation errors by 90% and processing time by 20 hours through real-time NoSQL databases, JWT authentication for security.

PROJECTS

The Merch Store

Dec 2023

- Deployed a high-performance, cloud-native e-commerce platform using MongoDB, Express.js, React.js, Node.js, leveraging AWS services (EC2, S3, CloudFront) for scalability, implemented Redux for state management and Elasticsearch for advanced product search capabilities.

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript (ES6+), Typescript, HTML5, SCSS, C++, Python, C.
- **Frameworks & Databases:** Spring Boot, Node.js, Nest.js, React.js, TensorFlow, Django, Flask, SQL, MongoDB, Redis.
- **DevOps:** AWS (EC2, Lambda, Cognito, SNS, DynamoDB, SQS), Git, Docker, Postman, Kubernetes, Terraform, Hadoop.

EDUCATION

Syracuse University

2022-2024

Master of Science, Computer Science

CGPA: 3.6/4.0

- Coursework: Algorithms, Operating Systems, Data Science, Machine Learning, Data Mining, Cryptography.
