EDUCATION

University of Delaware

B.S. in Computer Science, Minor in Mathematics | GPA: 3.5/4.0

Newark, DE

Aug. 2021 – May 2024

University of Delaware

M.S. in Data Science | GPA: 3.6/4.0

Newark, DE

Jun. 2024 – May 2025

- **Clubs:** Competitive Programming, ACM, CS for Social Good, Linux Users Group, Hackathon
- **Awards:** Academic Dean's List

EXPERIENCE

Art of Living

Remote

Machine Learning Intern

Jan. 2025 – Present

- Integrated a Random Forest classification model in Python using scikit-learn and TensorFlow alongside a development team to accurately predict moods from wearable sensor data in real time, achieving 89% prediction accuracy.
- Streamlined a data processing pipeline using Python and Pandas to extract, transform, and label biometric data from Oura Ring CSVs, boosting processing throughput by 4x and improving classification reliability.
- Automated data ingestion by implementing a file monitoring system using Python's watchdog library, ensuring timely processing of new wearable sensor data with minimal intervention, reducing latency by 12%.

Sensify Lab

Newark, DE

Software Developer Intern

Aug. 2022 – May 2025

- Designed and built a full-stack web application with the Sensify Lab team using Python, JavaScript, Flask, and Firebase, streamlining data gathering workflows for social science researchers, improving research efficiency.
- Utilized a Flask REST API for Twitter full-archive search integration, enabling scalable data preprocessing via NLTK, increasing data analysis of over 100,000 tweets for social research.
- Developed a modular NLP pipeline using Python, NLTK, and scikit-learn for tweet relevancy classification, incorporating TF-IDF vectorization, ensemble classifiers, and visualization (word clouds, confusion matrix heatmaps), with automated performance reporting to support research data analysis.

PROJECTS

NBA Player Statistics Dashboard

- Built a full-stack web application using Flask, HTML/CSS, JavaScript, enabling the exploration of NBA player statistics through interactive tables and plots, integrating the NBA API with Pandas for data retrieval and processing.
- Engineered a data pipeline to maintain comprehensive historical records for 5,000+ players and deliver real-time updates for 450+ active athletes, optimizing data retrieval speed and ensuring accuracy for downstream analytics.
- Developed interactive, data-driven visualizations using Matplotlib and Plotly to highlight seasonal trends, advanced performance metrics, and player matchup comparisons, enhancing user engagement and enabling deeper statistical analysis.

Steam Recommendation

- Designed and implemented a relational database schema in MySQL to model users, games, and playtime data, enabling personalized recommendation algorithms and efficient query performance.
- Developed a scalable Flask-based REST API to query and serve structured game and user data, optimizing response times through indexed queries and ensuring maintainable backend architecture.
- Built an interactive JavaScript frontend with dynamic filtering and data visualization features, allowing users to explore recommendations and trends in real time.

Election 2024 Twitter Sentiment Analysis

- Performed exploratory data analysis (EDA) on 100K+ tweets related to the 2024 U.S. election, handling missing values, removing noise, and preparing text for NLP pipelines.
- Conducted sentiment analysis and extracted named entities and geolocation metadata using VADER, NER, and visualization libraries (wordcloud, pandas, seaborn, matplotlib) to track political discourse over time and across regions.
- Developed rule-based classifiers for misinformation and satire detection using keyword heuristics to identify emerging trends in political discourse.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, C, C++, SAS, R

Data Tools & Visualization: Excel, Google Sheets, Tableau, Power BI

Libraries & Frameworks: Scikit-learn, TensorFlow, Pandas, NumPy, NLTK, Matplotlib, Seaborn, Flask, Plotly

Developer Tools: Git, GitHub, VS Code, PyCharm
