RELEVANT COURSEWORK

Data Science Capstone:

- Worked with three students on determining optimal geographical placement of wind turbines using weather and energy data
- Researched relevant datasets and utilized Pandas for cleaning/formatting
- Followed CRISP-DM methodology to prepare monthly reports on observed results
- Organized presentation slides summarizing the reports and rotated presenting with teammates

Large Scale Data Analytics:

- Implemented external sort in Python using partitioning and min-heap
- Used MapReduce to emulate grouping functionality on a dataset based on taxi rides in NYC
 - Answered questions such as distance by pickup location and identifying longest distances
- Solved similar problems using Spark DataFrame - `pypark.sql`
