

RAJESHWAR BOLISHETTY

+15126488552 | rajeshwar.bolishetty22@gmail.com | [LinkedIn](#)

Summary:

- Skilled with over 7 years of experience in **Java, Spring boot, spring MVC, Microservices, Struts, Hibernate, ReactJS, NodeJS, ExpressJS, Redux, AngularJS, REST Services, Typescript, HTML5, CSS3, JavaScript, Bootstrap, MySQL, Mongo DB, Oracle, GIT, Web pack.**
- Experience in implementing store management for front end applications using **Redux** and usage in middleware like **Redux Thunk** and **Redux Saga.**
- Worked on writing the unit tests in **Jest, enzyme, Mocha** and **Jasmine** for front end applications and **Junit** for backend applications.
- Strong Experience in writing the functional tests using **cypress** and **protractor** for front end applications and **testNG** for backend applications.
- Strong knowledge on **Hibernate** ORM framework. Used Hibernate Connection Pooling, HQL, Hibernate Caching, Transactions, Sessions.
- Experience in **Spring Security** Framework for **User Access Management, JWT token-based authentication** and involved in **OAuth 2.0** configuration for authentication, authorization and implemented comprehensive authentication and authorization mechanisms with **Spring Security.**
- Experience developing Service components using Spring framework APIs like **IOC, AOP, JDBC, Transactions, JPA, Hibernate Integration, Web Service Integration (SOAP/REST).**
- Good Knowledge on Spring Boot to run Spring Scripts for creating micro services.
- Good Knowledge in working with the building tools like **Maven, Ant, Jenkins.**
- Experienced with **Linux** system administration, **DevOps, AWS** and **GCP** cloud platform.
- Worked on Deployment Automation of all Microservices to pull image from Private **Docker** registry and deploy to **Kubernetes** Cluster.
- Streamlined development workflows through adept use of **Git** version control and **GitHub** for efficient code management and seamless collaboration.
- Skilled in performance testing with **JMeter** to identify bottlenecks and optimize application performance on **JBoss** servers.
- Used **Jira** and **Rally** for agile project management and leverage their features for issue tracking, backlog refinement, epic creation, task management and sprint planning.
- Strong experience in writing SQL queries in PL/SQL ,Triggers and stored procedures in **RDBMS** like **Oracle** and **MySQL.**
- Expertise in messaging queues like **Rabbit MQ,Apache Kafka**
- Adept at working within **Agile** Scrum environments, ensuring efficient project delivery.

Skills:

Web Technologies: HTML4/ HTML5, CSS3, SASS, JavaScript, Bootstrap, AngularJS, ReactJS, Java, NodeJS, NextJs, Spring Framework, Redux, Ajax, JSON, Angular, TypeScript, Angular CLI, AWS Cloud Services, Material UI.

Cloud Technologies: Amazon Web Services (AWS).

Web/App: Web Sphere, Apache, Apache Tomcat, JBOSS EAP, Web Logic Server

Frameworks: Angular 19, D3.JS, React JS, Bootstrap, spring MVC, Spring Boot, JDBC

Databases: MySQL, NOSQL,Postgres, RDBMS,Mango DB,DB2,ORACLE.

Build Tools: Jenkins, Maven

Task & Project Management: Jira, Rally

Version controls: GitHub, SVN Tortoise

Tools: Atom, IntelliJ, VsCode

Unit Testing: Jasmine, Karma, Mocha, Enzyme, Spring Junit, Kubernetes.

Functional Testing: Cypress, Selenium, Protractor

Professional Experience:

Optum

Feb 2024-Present

Java Full Stack Developer

Responsibilities:

- Worked on backend Spring Configurations for order services using **Spring Boot** framework.
- Developed **RESTful** Web Services with **JAX-RS** using Spring Boot and Microservices Architecture.
- Implemented the application with various Spring Framework modules like Spring IOC, **Spring MVC**, Spring Boot, Spring Security, Spring JDBC (with JPA annotations)
- Developed and maintained enterprise healthcare applications using **Java 21**, Spring Boot, and Spring Framework, leveraging modern language features to improve code readability and performance.
- Involved in development of services-based architecture utilizing open-source technologies like Hibernate ORM with JPA Annotations and Spring MVC Framework.
- Developed efficient designs and implemented User Interaction screens/Single Page Applications (SPA) using **HTML5, CSS3, JavaScript, ReactJS, and Bootstrap**.
- Implemented client-side Interface using React JS and used various predefined components from NPM (Node Package^[1]Manager) and Redux.
- Optimized backend services by adopting **Java 21** performance enhancements, resulting in reduced response times and improved resource utilization
- **Java 21** Record Classes and Pattern Matching to simplify DTO modeling and reduce boilerplate code across micro
- Developed backend services, data access objects, data repositories using spring and **Spring JPA**.
- Used Log4J was used to log both User Interface and Domain Level Messages.
- Implemented various features of **spring framework** such as Dependency Injection and Spring Integration with **Hibernate**. Used spring data JPA to communicate with data base.
- Worked with Restful Web services to interact with external systems exposed via **API Gateway** Interfaces
- Developed Unit tests by using **Jest** also involved in writing the functional test scripts using **Cypress** for front end components.
- Built and optimized complex Oracle PL/SQL packages, stored procedures, functions, and triggers to support critical business processes and improve database performance.
- Developed unit testcases for backend services using **Junit** and involved in writing the functional test scripts using **testNG** for third party apps.
- Create third party server-side APIs using NodeJS for authentication to enable instant communication to facilitate data transfer and improve overall application security.
- Deployed and developed the project using AWS EC2, S3 Buckets, Lambda.
- Involved in writing Java API for Amazon Lambda to manage some of the AWS.
- Integrated **GIT** into **Jenkins** to automate the code check-out process, using **Kafka** as a messaging system to exchange messages with the web.
- Evaluated and integrated AI/ML-enabled services and APIs to support intelligent automation, data-driven insights, and future platform enhancements.
- Involved in Setting up the Continuous Integration (CI) pipelines & jobs for the application using the Jenkins, managing **Docker** containers and **Kubernetes** Clusters.
- Optimized complex joins across multiple tables to retrieve comprehensive customer data for personalized marketing campaigns. Reduced query execution time by 35% through efficient indexing strategies

- Employed **Agile methodologies** to deliver projects efficiently and adapt to changing requirements.
- Currently focus on creating a clear, intuitive, and user-friendly experience for customers interacting with the order support system.

NYCT
Java Developer

July 2023-Feb 2024

Responsibilities

- Built new features and reusable platform libraries in **ReactJS** to accelerate development cycles and enhance customer-facing applications..
- Conducted API testing with Postman and implemented frontend unit tests using **Jasmine**, ensuring UI functionality and performance.
- Developed and maintained enterprise-scale backend applications for NYCT using **Java 17**, Spring Boot, and Microservices architecture to support critical transportation operations.
- Designed and implemented **RESTful APIs using Java Spring Boot** to integrate with backend incident tracking and disaster recovery workflows.
- Implemented **Spring Boot microservices** to process messages into a **Kafka cluster** setup for scalable and resilient data processing.
- Developed a **microservice leveraging Kafka** as a message broker to enable real-time notifications and updates, improving user engagement by 30%.
- Implemented **Spring Batch jobs** to automate disaster recovery report generation and incident archival processes.
- Utilized Java 17's enhanced garbage collection and JVM performance **improvements** to increase application stability and efficiency.
- Contributed to modernization initiatives by upgrading legacy applications to **Java 17**, improving performance, security, and long-term maintainability.
- Integrated **Spring Data JPA and Hibernate ORM** with MySQL databases for efficient data persistence and transaction management.
- Designed and implemented a **secure user authentication module using OAuth2 and JWT**, strengthening access control protocols.
- Implemented **Azure Functions, API Management (APIM), Azure Kubernetes Service (AKS)**, and automated deployments using **Azure DevOps CI/CD pipelines**.
- Managed **CI/CD pipelines using Docker and Kubernetes** for automated testing and deployments, and used **GitHub** for version control.
- Enhanced logging and monitoring capabilities using **Splunk**, enabling real-time insights and proactive issue resolution.
- Ensured continuous code quality by integrating **SonarQube** into the CI/CD pipeline to detect code smells, bugs, and vulnerabilities.
- Performed production support activities, troubleshooting application issues and conducting root cause analysis (RCA) for critical incidents.
- Conducted **load and performance testing using JMeter** to validate application behavior under stress and optimize throughput.
- Collaborated with cross-functional teams to integrate payment gateways and POS systems, enabling seamless transaction processing and reconciliation workflows.
- Written **E2E test cases using the Cypress framework** for robust front-end testing.
- Developed secure file transfer integrations using SFTP and RSA-based encryption mechanisms to support sensitive data exchange with external partners.
- Optimized **Cosmos DB** queries and used **Azure Monitor and Application Insights** for performance tracking and anomaly detection.

- Designed and implemented **API proxies in Apigee**, enhancing security through authentication, authorization, and traffic management.
- Followed the full **Software Development Life Cycle (SDLC)** under **Agile methodologies**, participating actively in **Scrum ceremonies** and utilizing **JIRA** for tracking tasks.
- Ensured continuous delivery and collaboration across **cross-functional teams** in an Agile environment.

Flipkart, Hyd,india
Java developer

July 2018-Aug 2022

Responsibilities:

- Implemented various front-end screens using **React.js**, leveraging reusable components from **NPM** and **Redux** libraries.
- Developed and maintained high-volume e-commerce backend applications using **Java 8**, Spring Boot, and Microservices architecture to support order management and customer-facing services.
- Used **HTML5**, **CSS3**, and **JavaScript** for developing responsive user interfaces; ensured mobile-first design using **Bootstrap**.
- Implemented **J2EE** components using **Spring MVC**, **Spring IoC**, **Spring Transactions**, and **Spring Security** modules.
- Optimized application performance by leveraging Java 8 Streams, caching mechanisms, and efficient database query tuning.
- Designed and implemented **RESTful web services** using **Node.js** for server-side and integrated communication to the front-end using **JSON**.
- Developed microservices using **Flask**, building modular backend systems for scalable applications.
- Integrated **Hibernate** with **Spring** using JDBC Driver Manager and implemented Hibernate second-level cache for performance.
- Performed **CRUD operations** on **MongoDB** and wrote optimized queries to enhance application performance.
- Implemented **Single Sign-On (SSO)** using **Spring Security** and **OAuth2** for seamless authentication across applications.
- Utilized **Amazon CloudWatch** for monitoring AWS services and **CloudWatch Logs** to track Kafka-driven applications.
- Configured **GitLab CI/CD pipelines** for automating build, test, and deployment processes to streamline software delivery.
- Handled asynchronous/synchronous communication by sending **JMS messages** to **Apache ActiveMQ** via **Kafka**.
- Built secure RESTful and SOAP-based APIs for claims processing, member management, and provider integration using JSON, XML, and WSDL
- Designed and implemented batch workflows using **Spring Batch** and **Spring Job** for handling large data volumes and task automation.
- Utilized **Apache Camel** as an integration pattern for seamless communication between enterprise components.
- Configured and deployed applications on Apache Tomcat and JBoss servers, ensuring high availability and operational stability.
- Experienced with **functional programming in Kotlin**, including higher-order functions, lambdas, and immutability for cleaner code.
- Used **IntelliJ IDEA** for application development and **log4j** for logging/debugging.
- Participated in **Agile** development cycles, including sprint planning and daily stand-ups.
- Practiced **Test-Driven Development (TDD)** with thorough **regression testing**.
- Used **JIRA** for bug tracking and **Jasper Reports** for generating detailed reporting dashboards.
