

Monteray Jackson

1900 Hillenwood Road, Baltimore, MD 21239 / (443) 651 - 9219 / mmjackson1224@gmail.com

Education

Bachelor of Science at Morgan State University
Major: Computer Science

Location: Baltimore, Maryland
Graduated: May/2024

Professional Summary

I am an experienced business office professional with skills in computer programming, data science, and software engineering. I am very enthusiastic about productivity, efficiency, reliability, commitment, and success. In the past, I have demonstrated my ability to adapt successfully to various positions. I have confidently made use of my skills of adaptability, and knowledge of business for success in every new working environment.

Skills Summary

Business Knowledge - Capable of performing assigned duties and following standard operating procedures as a clerical or IT professional in any business setting. Knowledgeable of CompTIA A+ training fundamentals.

Programming Languages - Proficient in the use of C++, JavaScript, HTML5/CSS, Python, and various other programming languages for application development.

Projects/Research - Ability to utilize a combination of problem solving, statistical and structural data analysis, database management, and software engineering techniques for research and visualization of various data science projects. Capable of conducting firsthand research and data correlation.

Web Development Techniques - Ability to design, develop, implement, and deploy web applications with the use of SDLC (software development life cycle) procedures, programming code, and software/website development environments (such as Microsoft VS, Anaconda3, Figma, and NetBeans). Utilized software development platforms for practice and completion of UI/UX designs, databases, machine learning and AI projects.

System Maintenance - Basic knowledge of computer system operation, administration, cybersecurity, and maintenance procedures and standards.

Coursework/Projects

Coursework

Proficiency in all computer science coursework, which includes data structures, programming, operating systems, network design, computer architecture, artificial intelligence, statistics, software engineering and cybersecurity.

Projects

- A responsive website/blog for a New York fashion blog, which utilizes HTML and CSS languages for style and format. The site includes various jump links (such as Contact and Home). See Codecademy link for additional responsive website projects.
 - An artificial intelligence project involving the use of Python programming language for demonstrating the combination of imported libraries and plotting functions used to train an AI agent for graphical data visualization.
 - An Airline Ticket Dispenser software engineering project that encapsulates the entire software engineering process; from requirements document to prototype creation (included use cases, architecture, UML) and testing to security and maintenance.
-

Work Experience

Amazon Fulfillment Center

Seasonal (intermittently) since 2016

Duties involved the use of computer terminals and RF scanning devices for the processing and shipment of products for distribution. Picking, sorting, packing and staging products for shipment.

State of Maryland Department of Transportation

07/2022 to 08/2022

Supervisor: Ms. Lorella Dicks

Full-time (40 hrs./wk.)

Performed receptionist duties, such as telephone messaging and providing information about vehicle citations to the public.

State of Maryland Department of Labor

Human Resources: Evelyn Andrade

Full-time (40 hrs./wk.)

02/2019 to 08/2019

Processed worker's tax credit applications by verification of social service benefits and public records. Performed file management and updated client records with the use of Google Docs.

Honors, Clubs & Awards

Dean's List - Fall 2015

National Society of Leadership and Success (NSLS) – Fall 2019
