| Summary

- Senior Java Full Stack Developer with **8+ years of experience** designing, developing, and deploying enterprise-scale, cloud-native applications across Banking, Telecommunications, Healthcare, Financial Services, and Retail domains.
- Skilled in **Java 17/11/8, Spring Boot, Spring Security, Microservices, RESTful APIs, React.js, and Apache Kafka**, with additional backend development experience in Python.
- Strong expertise in **SQL, Docker, Kubernetes, and AWS**, with a proven track record of building high-performance, scalable, and secure distributed systems, including event-driven architectures, legacy application modernization, and performance optimization.
- Experienced in implementing **CI/CD** pipelines using **Jenkins and GitLab CI/CD**, with hands-on expertise in Oracle, PostgreSQL, and Redis. Skilled in cloud-native deployment on **AWS EKS**, delivering highly available enterprise applications with 99.9%+ uptime.
- Familiar with AI-assisted application development using **OpenAI APIs, prompt engineering, and REST-based AI** integrations to drive intelligent automation and improve business workflows.
- Strong collaborator within cross-functional Agile teams, with experience mentoring developers and delivering high-quality solutions that enhance system performance, operational efficiency, and customer experience.
- Experienced in designing scalable enterprise applications, cloud-native microservices, and AI-enabled solutions across airline, SaaS, and manufacturing domains.

| Technical Skills

Languages: Java 8/11/17, Python, JavaScript, TypeScript, SQL

Backend: Spring Boot, Spring MVC, Spring Security, OAuth 2.0, Spring Data JPA, Hibernate, Microservices, REST APIs

Frontend: React.js, Angular, HTML5, CSS3, Bootstrap

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, ECS, EKS, API Gateway, CloudWatch, IAM), Docker, Kubernetes, Jenkins, Git, GitHub, Maven, CI/CD

Messaging: Apache Kafka, RabbitMQ

Databases: Oracle, PostgreSQL, SQL Server, MySQL, MongoDB

Testing: JUnit, Mockito, Postman

AI Technologies: OpenAI APIs, RAG, LLMs, LangChain, AI Agents, Prompt Engineering, Vector Databases

| Education

Bachelor in Computer Science

May 2016

V.R. Siddhartha Engineering College, INDIA

| Work experience

Senior Java Full Stack Developer

Dec 2023 - present

CapitalOne, Richmond, VA

Project Description: Developed cloud-native digital banking applications supporting customer accounts, payments, credit card servicing, and secure financial transactions. Built high-performance microservices and responsive web applications processing millions of daily banking events while ensuring regulatory compliance, fraud prevention, and real-time customer notifications. Leveraged Java 17, Spring Boot, React.js, Kafka, AWS, Docker, and Kubernetes to modernize banking platforms and enhance customer

experience.

Roles and Responsibilities:

- Architected and delivered secure, high-throughput microservices in Java 17 and Spring Boot that power digital banking accounts, payments, and credit card servicing for millions of customers.
- Cut page load times by 30% by building reusable React.js components with React Hooks and Context API, wiring them into REST APIs consumed across the banking portal.
- Reduced integration latency by 35% after redesigning RESTful APIs on Spring Data JPA and Hibernate, connecting core banking systems to third-party financial partners.
- Took ownership of the transaction-notification pipeline, engineering event-driven services on Apache Kafka that lifted throughput by 40% during peak banking hours.
- Hardened application security by rolling out Spring Security, OAuth 2.0, JWT, and RBAC across customer-facing services to meet enterprise compliance requirements.
- Configured AWS Secrets Manager and IAM Roles to securely manage application credentials and sensitive banking configuration data.
- Developed Python automation scripts to validate transaction data, reconcile batch processing results, and generate operational reports, reducing manual verification efforts.
- Built Python utilities to automate application log analysis, health checks, and deployment validation, enabling faster production issue identification and troubleshooting.
- Developed Python scripts to monitor Kafka message processing, validate data consistency across microservices, and automate daily operational support activities.
- Shrunk deployment time by 50% by containerizing services with Docker, deploying to AWS EKS, and automating releases through Jenkins and GitHub Actions.
- Tuned Oracle and PostgreSQL query plans and indexing strategy, improving transaction-processing efficiency by 25% across high-volume financial workflows.
- Implemented Resilience4j Circuit Breaker and Retry mechanisms to improve fault tolerance and ensure uninterrupted banking transactions during downstream service failures.
- Integrated AWS SNS and SQS services to enable reliable asynchronous notifications for payment confirmations, fraud alerts, and customer account activities.
- Raised test coverage to 90% with JUnit 5 and Mockito, and validated services via Postman and Swagger, driving a 30% drop in production defects.
- Kept the platform at 99.99% uptime by monitoring with Splunk and AWS CloudWatch and leading root-cause analysis on critical incidents.

Environment: Java 17, Spring Boot, Spring Security, Spring Data JPA, Hibernate, Microservices, REST APIs, React.js, React Hooks, Context API, Apache Kafka, OAuth 2.0, JWT, RBAC, AWS (EKS, Secrets Manager, IAM, SNS, SQS, CloudWatch), Docker, Kubernetes, Jenkins, GitHub Actions, Oracle, PostgreSQL, Resilience4j, JUnit 5, Mockito, Postman, Swagger, Splunk, Python

Senior Software Engineer

Oct 2022 - Aug 2023

Carelon Global Solutions, Hyderabad, INDIA

Project Description: Developed secure healthcare applications supporting member enrollment, claims adjudication, provider management, eligibility verification, and care coordination. Built HIPAA-compliant RESTful services and cloud-native backend systems that streamlined healthcare operations, automated business workflows, and improved interoperability between internal platforms and third-party providers using Java, Spring Boot, AWS, SQL, and Python.

Roles and Responsibilities:

- Built HIPAA-aligned Spring Boot microservices connecting internal claims and enrollment systems with third-party healthcare platforms.
- Improved interoperability across distributed healthcare systems by designing and consuming RESTful APIs, shaving 30% off API response times.
- Stood up fault-tolerant backend services on AWS (EC2, Lambda, S3), holding 99.9% uptime for member-facing applications.
- Developed HIPAA-compliant healthcare services supporting member enrollment, provider eligibility verification, and claims processing using Spring Boot.
- Rewrote and indexed core SQL queries, cutting query latency by 25% across claims-adjudication workloads.
- Secured REST endpoints handling protected health information with enterprise-grade authentication and authorization controls.
- Mentored two junior developers through paired code reviews and knowledge-sharing sessions on Spring Boot and REST API design, speeding up feature delivery for the team.
- Ran point on agile ceremonies with business analysts, QA engineers, DevOps teams, and Product Owners, sustaining a 95%+ sprint commitment.
- Built out JUnit test suites and led code reviews that brought post-release defects down 20%.
- Supported Jenkins CI/CD deployments and drove incident root-cause analysis to keep downtime minimal.

Environment: Java, Spring Boot, REST APIs, AWS (EC2, Lambda, S3), SQL, Python, JUnit, Jenkins CI/CD, Agile

Senior Java Full Stack Developer

Mar 2020 - Sep 2022

Broadridge Financial Solutions, Hyderabad, INDIA

Project Description: Developed enterprise financial services applications supporting securities trading, investment operations, portfolio management, trade settlements, and regulatory reporting. Built scalable microservices capable of processing high-volume financial transactions with low latency while integrating with multiple market data and investment platforms using Java, Spring Boot, Kafka, Redis, Oracle, React.js, and AWS.

Roles and Responsibilities:

- Delivered trading and portfolio-management features as scalable Java/Spring Boot/Spring MVC microservices built on Hibernate.
- Connected internal trading systems to external market-data and investment platforms via secure RESTful APIs.
- Layered Kafka-based async messaging and Redis/GemFire caching into the microservices tier to boost scalability under high trade volumes.
- Developed portfolio management and trade settlement modules supporting high-volume financial transactions with low-latency processing.
- Reworked slow SQL queries and data-access patterns, cutting response times across high-volume settlement transactions.
- Centralized configuration with Spring Cloud Config Server and standardized dependency management via Maven, backed by Jenkins CI/CD pipelines.
- Sat in Agile Scrum planning and reviews with business analysts, QA engineers, and DevOps teams, driving sprint deliverables through to production release.
- Wrote JUnit tests, validated integrations with Swagger and Postman, and handled production support with Splunk monitoring.

Environment: Java, Spring Boot, Spring MVC, Hibernate, REST APIs, Apache Kafka, Redis, GemFire, Oracle, React.js, AWS, Spring Cloud Config Server, Maven, Jenkins CI/CD, JUnit, Swagger, Postman, Splunk

Software Development Senior Associate

Jun 2017 - Mar 2020

NTT DATA Services Private Limited, Hyderabad, INDIA

Project Description: Developed and modernized enterprise retail and supply chain applications, supporting critical business operations through the migration of legacy COBOL/JCL systems to Java Spring Boot microservices. Built RESTful APIs and backend services to improve scalability, maintainability, and integration across enterprise and downstream systems using Java, Spring Boot, SQL/DB2, and REST APIs.

Roles and Responsibilities:

- Rebuilt legacy COBOL/JCL batch processes as modern Java Spring Boot microservices for retail and supply-chain operations.
- Designed REST APIs and system interfaces bridging modernized services with existing downstream enterprise systems.
- Led migration of core COBOL/JCL modules to Spring Boot, trimming technical debt and improving long-term maintainability.
- Tuned SQL/DB2 queries supporting data validation and reporting during the migration, improving processing performance.
- Worked directly with business analysts and SMEs to translate legacy business rules into scalable technical requirements.
- Handled production support, debugging, and performance tuning across both legacy and modernized systems.
- Took part in agile code reviews, unit testing, and defect triage, while coaching junior developers on coding standards.
- Managed source control, builds, and releases using Git, Maven, and Jenkins CI/CD pipelines to support the modernization rollout.

Environment: COBOL, JCL, Java, Spring Boot, SQL/DB2, REST APIs, Git, Maven, Jenkins CI/CD, Agile
